

## Disclaimer

The following report(s) provides findings from an FDA-initiated query using its Mini-Sentinel pilot. While Mini-Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Mini-Sentinel, and seeking to better understand the capabilities of the Mini-Sentinel pilot.

Data obtained through Mini-Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from the Mini-Sentinel pilot in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Mini-Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

If you are using a web page screen reader and are unable to access this document, please contact the Sentinel Operations Center for assistance at [info@sentinelssystem.org](mailto:info@sentinelssystem.org).

**Overview for Request to09y05\_mpr\_wp26\_v01, Report 2 of 2**

**Request ID:** to09y05\_mpr\_wp26\_v01, Report 2 of 2

**Request Description:** This report investigated diagnosis of agranulocytosis following new use of several anti-epileptic drugs (AEDs), as well as clozapine and olanzapine.

**Sentinel Modular Program Tool Used:** Modular Program #3 (MP3)

**Data Source:** Data from January 1, 2000 to May 31, 2013 from 18 Data Partners contributing to the Mini-Sentinel Distributed Database (MSDD) were included in this request. The request was distributed to Data Partners on April 11, 2014. Please see Appendix A for dates of available data.

**Study Design:** The purpose of this request was to examine users, episodes, dispensings, and events of several anti-epileptic drugs, as well as clozapine and olanzapine, with varying incident definitions, agranulocytosis event washout periods (7 and 183 days), and agranulocytosis event primary diagnosis indicators (primary and nonsecondary). Please see Appendices B and C for generic names used to define exposure in this request. Please see Appendix D for International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) codes used to define outcomes. In total, 40 scenarios were examined in this request with differing exposures of interest, incidence criteria, event washout period, event care setting. This report gives results for scenarios 25-40, which required the exposures to be incident to all oral AEDs of interest. Please see Appendix D for more details on each scenario.

**Cohort Eligibility Criteria:** Patients were required to be continuously enrolled in plans with both medical and drug coverage for at least six months (183 days) before their first valid dispensing of the exposure medication, during which gaps in coverage of up to 45 days were allowed. The following age groups were included in the cohort: <18, 18-<45, 45-<60, 65 + years.

**Limitations:** Algorithms used to define exposures and outcomes are imperfect; thus, it is possible that there may be misclassification.

**Notes:** Please contact the Sentinel Operations Center Query Fulfillment Team ([qf@sentinelssystem.org](mailto:qf@sentinelssystem.org)) for questions and to provide comments/suggestions for future enhancements to this document.

<b><u>Glossary</u></b>	List of Terms found in this Report and their Definitions
<b><u>Table 1</u></b>	Incident Drug Use (Incident to All Drugs in Appendix B) in the Mini-Sentinel Distributed Database (MSDD) between January 1, 2000 and May 31, 2013, by Drug Product, Event Washout Period, and Primary Diagnosis Indicator
<b><u>Table 2</u></b>	Incident Drug Use (Incident to All Drugs in Appendix B) in the Mini-Sentinel Distributed Database (MSDD) between January 1, 2000 and May 31, 2013, by Drug Product, Event Washout Period, Primary Diagnosis Indicator, and Age Group
<b><u>Table 3</u></b>	Incident Drug Use (Incident to All Drugs in Appendix B) in the Mini-Sentinel Distributed Database (MSDD) between January 1, 2000 and May 31, 2013, by Drug Product, Event Washout Period, Primary Diagnosis Indicator, and Sex
<b><u>Table 4</u></b>	Incident Drug Use (Incident to All Drugs in Appendix B) in the Mini-Sentinel Distributed Database (MSDD) between January 1, 2000 and May 31, 2013, by Drug Product, Event Washout Period, Primary Diagnosis Indicator, and Year
<b><u>Appendix A</u></b>	Available Data in the Mini-Sentinel Distributed Database (MSDD) for Each Data Partner (DP) as of Request Send Date (April 11, 2014)
<b><u>Appendix B</u></b>	Generic and Brand Names Used to Define Exposures in this Report
<b><u>Appendix C</u></b>	International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) Diagnosis Codes Used to Define Agranulocytosis Events in this Report
<b><u>Appendix D</u></b>	Specifications for Query ID to09y05_mpr_wp26_v01

### Glossary of Terms in Modular Program 3\*

**Amount Supplied** - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing. This is equivalent to the "RxAmt" value in the MSCDM.

**Blackout Period** - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

**Care Setting** - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA).

**Cohort Definition (drug/exposure)**- Indicates how the cohort will be defined: (1) 01: Cohort includes only the first valid incident treatment episode during the query period; (2) 02: Cohort includes all valid incident treatment episodes during the query period; (3) 03: Cohort includes all valid incident treatment episodes during the query period until an event occurs

**Days Supplied** - number of days supplied for all dispensings in qualifying treatment episodes.

**Years at Risk** - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

**Eligible Members** - Number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

**Enrollment Gap** - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

**Episode Gap** - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

**Event Deduplication** - specifies how events are counted by the MP algorithm: A value of 0 counts all occurrences of an event group code of interest; a value of 1 de-duplicates occurrences of the same event code on the same day (i.e., de-duplicates at the exact match code level); and a value of 2 de-duplicates occurrences of the same event group code on the same day (e.g., de-duplicates at the GROUP level).

**Exposure Extension Period** - number of days post treatment period in which the outcomes/events are counted for a treatment episode.

**Lookback Period (pre-existing condition)** - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

**Member-Years** - sum of all days of enrollment with medical and drug coverage\*\* in the query period preceded by an exposure washout period all divided by 365.23.

**Minimum Days Supplied** - specifies a minimum number of days in length of the days supplied for the episode to be considered

**Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered

**New Episodes** - new treatment episodes; length of episode is determined by days supplied in one dispensing (or consecutive dispensings bridged by the episode gap).

**New Episodes with Events** - number of unique episodes during which at least one incident event occurs. Each episode may only be counted once.

**New Users** - number of members with incident exposure during the query period. Member must have no evidence of exposure (s) of interest (defined by incidence criteria) in the prior washout period. A user may only be counted once in a query period.

**Number of Events** - total number of incident events. An individual or a treatment episode can have more than one incident event provided that the incident event meets the event incidence criteria.

**Principal Diagnosis (PDX)** - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. YES will only consider diagnoses flagged as Principal

**Query Period** - period in which the modular program looks for exposures and outcomes of interest.

**Treatment Episode Truncation Indicator** - indicates whether observation of the incident query code during follow-up requires truncation of valid treatment episodes. A value of Y indicates that the treatment episodes should be truncated at the first occurrence of an incident query code. A value of N indicates that the treatment episodes should not be truncated at the occurrence of the incident query code.

**Washout Period (drug/exposure)\*\*** - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

**Washout Period (event/outcome)\*\*** - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

\*all terms may not be used in this report

\*\*incident treatment episodes must be incident to both the exposure and the event

**Table 1: Incident Drug Use (Incident to All Drugs in Appendix B) in the Mini-Sentinel Distributed Database (MSDD) between January 1, 2000 and May 31, 2013, by Drug Product, Event Washout Period, and Primary Diagnosis Indicator**

TOPIRAMATE	TOPIRAMATE
TOPIRAMATE	TOPIRAGEN
TOPIRAMATE	TROKENDI XR
CLOZAPINE	CLOZARIL
CLOZAPINE	CLOZAPINE
CLOZAPINE	CLOZAPINE ODT
CLOZAPINE	FAZACLO
CLOZAPINE	VERSACLOZ
OLANZAPINE/FLUOXETINE HCL	SYMBYAX
OLANZAPINE/FLUOXETINE HCL	OLANZAPINE-FLUOXETINE HCL
OLANZAPINE	ZYPREXA
OLANZAPINE	ZYPREXA ZYDIS
OLANZAPINE	OLANZAPINE
OLANZAPINE	OLANZAPINE ODT

**Appendix C: International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) Diagnosis Codes Used to Define Agranulocytosis Events in this Report**

---

<b>Code*</b>	<b>Description</b>
288	Diseases of white blood cells
288.0	Neutropenia
288.00	Neutropenia, unspecified
288.01	Congenital neutropenia
288.02	Cyclic neutropenia
288.03	Drug induced neutropenia
288.04	Neutropenia due to infection
288.09	Other neutropenia
288.2	Genetic anomalies of leukocytes
288.4	Hemophagocytic syndromes
288.5	Decreased white blood cell count
288.50	Leukocytopenia, unspecified
288.59	Other decreased white blood cell count
288.9	Unspecified disease of white blood cells

\* exact match query

### Appendix D. Specifications for Query ID to09y05\_mpr\_wp26\_v01

Modular Program #3 was used to investigate diagnosis of agranulocytosis following new use of several anti-epileptic drugs (AEDs), as well as clozapine and olanzapine. Five runs of the program were required. In total, forty different scenarios were examined in this request with differing exposures of interest, incidence criteria, event washout period, and event care setting. See below for a description of each of these scenarios. Report 2 presents scenarios 25-40 where the exposures are incident to a list of other drugs (Appendix B) in addition to the drug of interest.

<b>Coverage Requirement</b>	Drug and Medical Coverage
<b>Query Period</b>	January 1, 2000 to May 31, 2013
<b>Enrollment Gap</b>	45 Days
<b>Minimum Enrollment Days</b>	183 Days
<b>Age Stratifications</b>	<18, 18-<45, 45-<65, 65+ Years

Scenario	Drug/Exposure									Event/Outcome			
	Incident exposure	Incident w/ respect to:	Washout (days)	Cohort Definition	Episode Gap	Exposure Extension Period	Minimum Days Supplied	Minimum Episode Duration	Episode Truncation by Incident Exposure	Event/ Outcome	Washout Period	Event De-duplication	Care Setting/ PDX
