

## Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

## Overview for Request: cder\_mpl1r\_wp155

**Request ID:** cder\_mpl1r\_wp155\_nsdv\_v01

**Request Description:** The purpose of this request was to calculate the number of treated patients and time to treatment among patients diagnosed with cutaneous small-vessel vasculitis (CSVV) in the IBM® MarketScan® Research Databases who had prior use of four medical products: direct oral anticoagulants (DOACs), warfarin, allopurinol, and propylthiouracil. The post-CSVV treatments of interest were prednisone/prednisolone alone as well as prednisone/prednisolone combined with an autoimmune medication. The results of this query were used for subsequent Patient Episode Retrieval (PEPR) sampling to further evaluate treatment patterns among patients with CSVV.

**Sentinel Routine Querying Module:** Cohort Identification and Descriptive Analysis module, version 9.0.1

**Data Source:** This query was executed on the 100% MarketScan database on December 19, 2019. This report includes data from October 19, 2010 - December 31, 2018. See Appendix A for the dates of available data used in this report.

**Cohort Eligibility Criteria:** Members were required to be enrolled in health plans with both medical and drug coverage for at least 183 days prior to their event, during which gaps in coverage of up to 45 days were allowed. Only individuals aged 21 or older were included.

**Index Event of Interest:** The index event was a diagnosis for CSVV in an outpatient or inpatient setting. We defined CSVV using International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes. See Appendix B for a list of codes used to define CSVV.

**Study Design:** Among patients indexed with a diagnosis of CSVV in an outpatient setting, we created separate cohorts to compare post-CSVV treatment patterns among those with prior use of four drug groups of interest: warfarin, direct oral anticoagulants (DOACs), allopurinol, or propylthiouracil. For each of the four study medical products, we evaluated for two distinct treatment outcomes:

**Treatment outcome #1.** Index on patients with an incident CSVV event (183-day washout) in an outpatient setting and prior use of specified study drug within 90 days prior to CSVV, but no prior use in preceding 183 to 91 days. Within 90 days of CSVV, evaluate for Prednisone or Prednisolone dispensing.

**Treatment outcome #2.** Index on patients with an incident CSVV event (183-day washout) in an outpatient setting and prior use of specified study drug within 90 days prior to CSVV, but no prior use in preceding 183 to 91 days. Within 90 days of CSVV, evaluate for combination of Prednisone or Prednisolone dispensing and an autoimmune medication.

We also created four cohorts of patients indexed with a diagnosis of CSVV in an inpatient setting, one for each study medical product. Patients in these cohorts were required to have an incident CSVV event (183-day washout) in an inpatient setting and prior use of specified study drug within the 90 days prior to CSVV, but no prior use in preceding 183 to 91 days. No treatment outcome was evaluated.

See Appendix C.1 for a list of generic and brand names of medical products and C.2 for a list of Healthcare Common Procedure Coding System (HCPCS) and Current Procedural Terminology, Fourth Edition (CPT-4) procedure codes used to define treatment outcomes.

### Overview for Request: cder\_mpl1r\_wp155

Each of the 12 cohorts additionally shared the following characteristics:

1. Follow up continued for 90 days the CSVV diagnosis. Episodes were censored by patient death, disenrollment, query end date, Data Partner end date, or a dispensing for a specified drug treatment.
2. Patients were required to have a diagnosis of atrial fibrillation within the 183 days prior to CSVV.
3. Patients may not have had any prior use of other study drugs within 183 days prior to CSVV. For example, the cohort that includes patients with prior DOAC use within 90 days of CSVV should exclude anyone with prior use of warfarin, allopurinol, or propylthiouracil in the prior 183 days.
4. Patients with any of the following within 183 days prior to CSVV were excluded:
  - Select autoimmune diagnoses or medications
  - Kidney transplant or dialysis
  - Hip or knee replacement, deep vein thrombosis, pulmonary embolism

See Appendices D.1 for International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes, Healthcare Common Procedure Coding System (HCPCS) and Current Procedural Terminology, Fourth Edition (CPT-4) procedure codes, and D.2 for a list of generic and brand names of medical products used to define Inclusion and Exclusion Criteria.

**Please see Appendix E for the specifications of parameters used in this analysis.**

**Glossary of Terms for Analyses Using  
Cohort Identification and Descriptive Analysis (CIDA) Module\***

**Amount Supplied** - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

**Blackout Period** - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

**Care Setting** - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

**Ambulatory Visit (AV)** - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

**Emergency Department (ED)** - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

**Inpatient Hospital Stay (IP)** - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

**Non-Acute Institutional Stay (IS)** - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

**Other Ambulatory Visit (OA)** - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

**Charlson/Elixhauser Combined Comorbidity Score** - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

**Code Days** - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

**Cohort Definition (drug/exposure)** - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

**Computed Start Marketing Date** - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

**Days Supplied** - number of days supplied for all dispensings in qualifying treatment episodes.

**Eligible Members** - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

**Enrollment Gap** - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

**Episodes** - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

**Episode Gap** - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

**Event Deduplication** - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the

**Exposure Episode Length** - number of days after exposure initiation that is considered "exposed time."

**Exposure Extension Period** - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

**Lookback Period** - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

**Maximum Episode Duration** - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Member-Years** - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

**Minimum Days Supplied** - specifies a minimum number of days in length of the days supplied for the episode to be

**Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Monitoring Period** - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.

**Principal Diagnosis (PDX)** - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

**Query Period** - period in which the modular program looks for exposures and outcomes of interest.

**Switch Evaluation Step Value** - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

**Switch Gap Inclusion Indicator** - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

**Switch Pattern Cohort Inclusion Date** - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

**Switch Pattern Cohort Inclusion Strategy** - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

**Treatment Episode Truncation Indicator** - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

**Washout Period (drug/exposure)** - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

**Washout Period (event/outcome)** - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

**Years at Risk** - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

IBM® MarketScan® Research Databases*	01/01/2010	09/30/2018

\* The IBM® MarketScan® Research Databases includes a sample of 135 million employees, dependents, and retirees in the United States with primary or Medicare supplemental coverage through privately insured fee-for-service, point-of-service, or capitated health plans. The IBM® MarketScan® Research Databases are based on a large convenience sample. Because the sample is not random, it may contain biases or fail to generalize well to other populations. Data come mostly from large employers; medium and small firms may be underrepresented. For more information on the IBM® MarketScan® Research Databases, please review the White Paper here:
