

Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Overview for Request cder_mpl1p_wp089 (Report 3 of 3)

Request ID: cder_mpl1p_wp089

Request Description: Lyme disease can be prevented by taking one dose of doxycycline (200 mg or 4.4 mg/kg for persons <45 kg) when administered within 72 hours after a high-risk tick bite. To shed light on patterns of Lyme disease post-exposure prophylaxis (PEP) in the United States, we characterized the frequency and patterns of single dose doxycycline over time, and described characteristics of individuals with these dispensings in the Sentinel Distributed Database (SDD).

Sentinel Routine Querying Module: Cohort Identification and Descriptive Analysis (CIDA) module, version 13.1.2, with custom programming.

Data Source: We distributed this request to five Sentinel Data Partners on December 2, 2024. These five Data Partners are a subset of the SDD. In this report (3 of 3), patients with Medicaid coverage and claims coverage were included. Report 1 of 3 contains patients with Medicaid coverage. Report 2 of 3 contains patients with claims coverage. The study period included data from January 1, 2016 through December 31, 2020. Please see Appendix A for a list of dates of available data for each Data Partner.

Study Design: We identified individuals of all ages with an incident dispensing of single-dose doxycycline. We described single-dose doxycycline dispensing trends over time, as well as patient and dispensing characteristics (e.g., year of dispensing, sex, age, race, ethnicity, type of recent medical encounter). Due to the highly focal geographic distribution of Lyme disease, we examined single-dose doxycycline dispensings by state, urbanicity, and month. We also described the number and proportion of individuals dispensed multiple courses of single-dose doxycycline, and performed a sensitivity analysis removing dispensings with evidence of obstetric or dermatologic conditions in the surrounding 30 days as single dose doxycycline can also be prescribed to treat certain obstetric and dermatologic conditions. This is a Type 1 analysis in the Query Request Package (QRP) documentation, modified with custom programming.

Exposure of Interest: Lyme disease PEP was our exposure of interest, and thus we examined qualifying dispensings of doxycycline (index) (<=200 mg, one-day supply). To ensure the dispensing was isolated (i.e., only a single day supply), we defined incidence with a one day washout prior to and following the dispensing of interest, with consideration of any doxycycline dispensing. Specifically, we removed doxycycline dispensings with evidence of another dispensing (dispensing itself, or day supply of multi-day dispensing) in the day prior, and did not include doxycycline dispensings with evidence of another doxycycline dispensing the next day. Please see Appendix B for a list of generic and brand names of medical products.

Cohort Eligibility Criteria: We required cohort members to be enrolled in health plans with medical and drug coverage in the 30 days prior to and following their index dispensing; a gap in coverage of up to 45 days was allowed and treated as continuous enrollment. There were two separate age groupings included in analyses: Age group 1 in years: 0-4, 4-9, 10-14, 15-19; Age group 2 in years: 0-7, 8-19.

Baseline Characteristics: We assessed the baseline characteristics in two windows surrounding the index dispensing: 7 and 30 days prior to and following the index dispensing. The exposure related baseline characteristics of interest were: arthropod encounter, Lyme disease, other tickborne diseases, obstetric conditions, and dermatologic conditions. Additionally, we assessed the following Pediatric Comorbidity Index (PCI)¹ conditions: attention deficit hyperactivity disorder, alcohol abuse or dependence, anemia, anxiety or panic disorder, any malignancy, asthma, cardiovascular conditions, chromosomal anomalies, conduct disorder, congenital malformations, depression, developmental delays, diabetes mellitus, drug abuse or dependence, eating disorders, epilepsy or convulsions, gastrointestinal conditions, injuries, joint disorders, menstrual disorders, migraine or headache, nausea and vomiting, obesity or overweight, obsessive-compulsive disorder, pain conditions, pervasive developmental disorders, psychotic disorders, rheumatologic disorders, sleep disorders, smoking, specific personality disorder, and weight loss. Please see Appendix C for a list of International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes, International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) procedure codes, Current Procedural Terminology, Fourth Edition (CPT-4) procedure codes, and Healthcare Common Procedure Coding System (HCPCS) procedure codes we used to define baseline characteristics in this request.

Overview for Request cder_mpl1p_wp089 (Report 3 of 3)

We evaluated the following characteristics on the index dispensing date: age, year, dispensing form, and dispensing dose. Dose was calculated as the strength of the National Drug Code (NDC) multiplied by the amount supplied for all routes except syrups and solutions, for which the strength multiplied by the liquid volume unit. For each member with a dispensing of interest, we evaluated: sex, race, ethnicity, and zip code. Zip code was used to assign state, Lyme disease incidence category, and urbanicity. To classify persons as living in an urban area (population $\geq 50,000$), suburban area (population $\geq 2,500$, $< 50,000$), or rural area (population $< 2,500$), we used U.S. Census Bureau 2010 Census Urban Area data supplemented by Uniform Data System (UDS) Mapper for zip code to zip code tabulation area (ZCTA) crosswalks. In cases of a zip code mapping to multiple urban categories, we assigned the category based on the following guidelines:

- Suburban + Rural -> Suburban
- Suburban + Urban -> Suburban
- Rural + Urban + Suburban -> Suburban
- Rural + Urban -> Urban

In the Sentinel Common Data Model, there is one zip code assigned per member, and zip codes are updated and overwritten as the member's location changes over time. The location reflected in this report is the member's most recent zip code.

Sensitivity Analyses: We performed sensitivity analyses examining the first qualifying index dispensing of doxycycline per patient, and then all qualifying dispensings per patient. In the analysis examining all qualifying dispensings per patient we allowed cohort re-entry. Additionally, we conducted a second sensitivity analysis which excluded patients with any evidence of obstetric and dermatologic conditions in the 30 days prior to and post index dispensing. Cohort re-entry was allowed for sensitivity analyses. Only counts of patients with single-dose doxycycline dispensings were included in the sensitivity analyses. Please see Appendix D for a list of ICD-10-CM, ICD-10-PCS, CPT-4, and HCPCS codes used to define this exclusion criteria in this request.

Please see Appendices E-I for the specifications of parameters used in this request and the study design diagrams.

Limitations: The algorithms used to define the events are imperfect; thus, it is possible that there may be misclassification. Therefore, data should be interpreted with this limitation in mind. Although we stratified some estimates by race/ethnicity, please keep in mind that this information is not well captured in many systems. In addition, our program assigned state of residence and urbanicity using enrollee's most recent zip code, which may not reflect residence or place of exposure at the time of the single dose doxycycline dispensing.

Notes: Please contact the Sentinel Operations Center (info@sentinel-system.org) for questions and to provide comments/suggestions for future enhancements to this document. **Glossary of Terms for Analyses Using
Cohort Identification and Descriptive Analysis (CIDA) Module***

Amount Supplied - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

Blackout Period - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

Care Setting - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Charlson/Elixhauser Combined Comorbidity Score - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

Code Days - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

Cohort Definition (drug/exposure) - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

Computed Start Marketing Date - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

Days Supplied - number of days supplied for all dispensings in qualifying treatment episodes.

Eligible Members - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

Enrollment Gap - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

Episodes - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

Episode Gap - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

Event Deduplication - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

Exposure Episode Length - number of days after exposure initiation that is considered "exposed time."

Exposure Extension Period - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

Lookback Period - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

Maximum Episode Duration - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Glossary of Terms for Analyses Using
Cohort Identification and Descriptive Analysis (CIDA) Module***

Member-Years - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

Minimum Days Supplied - specifies a minimum number of days in length of the days supplied for the episode to be considered.

Minimum Episode Duration - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Monitoring Period - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

Query Period - period in which the modular program looks for exposures and outcomes of interest.

Switch Evaluation Step Value - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

Switch Gap Inclusion Indicator - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

Switch Pattern Cohort Inclusion Date - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

Switch Pattern Cohort Inclusion Strategy - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

Treatment Episode Truncation Indicator - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

Washout Period (drug/exposure) - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

Washout Period (event/outcome) - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

Years at Risk - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.
