

## Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

## Overview for Request: cder\_mpl1p\_wp096 (Report 2 of 2)

**Request ID:** cder\_mpl1p\_wp096

**Request Description:** The goal of this query was to characterize the capture of well-known confounding characteristics in the Sentinel Distributed Database (SDD).

**Sentinel Routine Querying Module:** Cohort Identification and Descriptive Analysis (CIDA) module, version 14.0.1

**Data Source:** We distributed this request to 14 Sentinel Data Partners on December 9, 2024. The study period included available data from January 1, 2010 to December 31, 2023. Please see Appendix A for a list of dates of available data for each Data Partner. This is report two out of two and includes data from seven Sentinel Data Partners that contribute vitals data.

**Study Design:** This request was designed to describe cohorts with prevalent and incident confounding conditions; diagnosis codes for a BMI range; height and weight measurements in the vitals data; calculatable body mass index (BMI) using vitals data; records of blood pressure in the vitals data; and non-missing values for race and imputed race. Except for the non-missing race and imputed race cohorts, the number of qualifying occurrences (episodes) of the cohort-defining variables were stratified by calendar year, age group \* calendar year, and sex \* calendar year. For the non-missing race and imputed race cohorts, individuals in each race/imputed race category were stratified by sex and age.

This is a Type One request in the Query Request Package (QRP) documentation.

### Cohort Defining Conditions:

**Group One:** Separate prevalent and incident cohorts were identified for occurrences of codes for the following conditions: obesity, overweight, smoking, alcohol abuse or dependence, drug abuse or dependence, coronary artery bypass grafting (CABG) or percutaneous transluminal coronary angioplasty (PTCA), and sudden cardiac arrest. Conditions were defined using International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM), International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM), International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS), Current Procedural Terminology (CPT), Healthcare Common Procedure Coding System (HCPCS), and National Drug Codes (NDC). Please see Appendix B for a list of ICD-9-CM, ICD-10-CM, and ICD-10-PCS codes; Appendix C for a list of generic and brand names of medical products; and Appendix D for a list of ICD-10-PCS, CPT, and HCPCS codes used to define these cohorts.

**Group Two:** Separate cohorts were identified for all occurrences of any ICD-9-CM or ICD-10-CM diagnosis codes that indicates any range of BMI, a range of BMI classified as obesity, and a range of BMI classified as overweight. Please see Appendix B for a list of ICD-9-CM and ICD-10-CM codes used to define these cohorts.

**Group Three:** Separate cohorts for all occurrences of non-missing values for height, weight, systolic blood pressure (BP), and diastolic BP were identified using vitals data.

**Group Four:** Separate cohorts of all occurrences of calculatable BMI, calculated BMI in the obesity range, and calculated BMI in the overweight range were identified using vitals data. BMI was defined as calculatable if a valid height was recorded within +/-183 days of a valid weight measurement. The height record closest to the date of the weight measurement was used for calculating BMI. Height and weight measurements in the following range were not considered valid: height < 48 inches and height > 84 inches; weight < 50 pounds and weight > 700 pounds.

**Group Five:** Separate cohorts of members with non-missing values for reported race and imputed race between January 1, 2020 and December 31, 2021 were identified.

For all cohorts except Groups Four and Five, the dates of all qualifying occurrences of cohort-defining codes in claims or measurements in vitals data served as index dates. For Group Four (calculatable and calculated BMI cohorts), the dates of all valid weight measurements with a valid height measurement within +/-183 days served as the index dates. For Group Five (race cohorts), the dates of the earliest encounter between January 1, 2020 and December 31, 2021 served as the index dates.

## Overview for Request: cder\_mpl1p\_wp096 (Report 2 of 2)

### Cohort Eligibility Criteria:

All cohorts except group four: Individuals were required to be continuously enrolled in plans with medical and drug coverage for at least 365 days prior to the index dates, during which gaps in coverage of up to 45 days were allowed. For the incident cohorts, episodes with evidence of the cohort defining condition in the 365 days prior to the index date were not considered valid. The following age groups were included: 0-17, 18-43, 44-64, and 65+ years.

**Group Four Cohorts:** Individuals were required to be continuously enrolled in plans with medical and drug coverage for at least 365 days prior through 183 days after the index dates. Gaps in coverage of up to 45 days were allowed during this period. The following age groups were included: 18-43, 44-64, and 65+ years.

**Individual Characteristics:** The following characteristics were assessed for unique individuals in each cohort on their first valid index date: sex, race, imputed race, and Hispanic origin. Age and the year of cohort entry were assessed on each valid index date. Additionally, for the incident and prevalent smoking cohorts, the following characteristics were assessed in the 365 days leading up to each valid index date: tobacco use (current user, never user, quit/former user, passive exposure, environmental exposure, not asked, and conflicting) and tobacco type (cigarettes only, other tobacco only, cigarettes and other tobacco, and none).

Please refer to Appendices E through H for the specifications of parameters used in this request, baseline characteristics used in this request, and design diagrams.

**Limitations:** Algorithms used to define exposures and inclusion criteria are imperfect; thus, misclassification is possible. Therefore, data should be interpreted with this limitation in mind.

**Notes:** Please contact the Sentinel Operations Center ([info@sentinelssystem.org](mailto:info@sentinelssystem.org)) for questions and to provide comments/suggestions for future enhancements to this document. ## Glossary of Terms for Analyses Using Cohort Identification and Descriptive Analysis (CIDA) Module\*

**Amount Supplied** - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

**Blackout Period** - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

**Care Setting** - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

**Ambulatory Visit (AV)** - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

**Emergency Department (ED)** - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

**Inpatient Hospital Stay (IP)** - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

**Non-Acute Institutional Stay (IS)** - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

**Other Ambulatory Visit (OA)** - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

**Charlson/Elixhauser Combined Comorbidity Score** - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

**Code Days** - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

**Cohort Definition (drug/exposure)** - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

**Computed Start Marketing Date** - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

**Days Supplied** - number of days supplied for all dispensings in qualifying treatment episodes.

**Eligible Members** - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

**Enrollment Gap** - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

**Episodes** - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

**Episode Gap** - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

**Event Deduplication** - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

**Exposure Episode Length** - number of days after exposure initiation that is considered "exposed time."

**Exposure Extension Period** - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

**Lookback Period** - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

**Maximum Episode Duration** - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Member-Years** - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

**Minimum Days Supplied** - specifies a minimum number of days in length of the days supplied for the episode to be considered.

**Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Monitoring Period** - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.

**Principal Diagnosis (PDX)** - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

**Query Period** - period in which the modular program looks for exposures and outcomes of interest.

**Switch Evaluation Step Value** - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

**Switch Gap Inclusion Indicator** - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

**Switch Pattern Cohort Inclusion Date** - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

**Switch Pattern Cohort Inclusion Strategy** - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

**Treatment Episode Truncation Indicator** - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

**Washout Period (drug/exposure)** - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

**Washout Period (event/outcome)** - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

**Years at Risk** - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

<sup>1</sup>All metrics are based on total number of episodes per group, except for sex, race, and Hispanic origin which are based on total number of unique patients.

<sup>2</sup>Race and Hispanic status are typically populated using self-report data from source and are classified as "Unknown" if not reported or provided.

<sup>3</sup>Categories under tobacco use and tobacco type do not add up to the total number of episodes because these fields are not populated for all enrollees.

<sup>4</sup>The "conflicting" value denotes tobacco information from multiple sources in the EHR that disagree. Smoking and tobacco type may be recorded at multiple places in the EHR data and there may be disagreement between these different records.

<sup>1</sup>If race is not reported, reported race is classified as "Unknown" which is a non-missing value in the Sentinel Database. The purpose of the "Has non-missing reported race" cohort was to describe all enrollees in the data with at least one encounter qualifying the inclusion criteria during 2020-2021.

<sup>2</sup>Only four DPs impute race; for all other DPs, imputed race data is unavailable. DPs have their own methods of imputing and race may not be imputed for all enrollees. DPs can impute the race of any enrollee, regardless of whether their reported race is "Unknown." As a result, even among DPs that perform imputation, enrollees with any value for reported race may receive any imputed race value, including "Unknown," or may have missing imputed race.

<sup>3</sup>Because there is no timestamp for race documentation, the index date for the race cohorts was the date of the first encounter. Since the race value is same across all subsequent encounters, no episodes were created. The number of unique patients in each cohort served as the denominator for all proportions reported in this table.

<sup>4</sup>Age was assessed on the index date, i.e., the first encounter.

<sup>5</sup>Race and Hispanic status are typically populated using self-report data from source and are classified as "Unknown" if not reported or provided.

<sup>6</sup>This variable reflects reported race for the "Non-missing value for reported race" cohort and imputed race for the "Non-missing value for imputed race

<sup>1</sup>Eligible Members and Member-Years are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.

<sup>2</sup>Unlike earlier sections describing incident and prevalent capture of confounding conditions from diagnosis, procedure, and drug codes, this section captures additional prevalent conditions from demographic data (race and imputed race), diagnosis codes (BMI categories), and vitals data (remaining variables).

<sup>1</sup>Eligible Members and Member-Years are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.

<sup>2</sup>Unlike earlier sections describing incident and prevalent capture of confounding conditions from diagnosis, procedure, and drug codes, this section captures additional prevalent conditions from demographic data (race and imputed race), diagnosis codes (BMI categories), and vitals data (remaining variables).

\*\*\*\*\*Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

<sup>1</sup>Eligible Members and Member-Years are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.

<sup>2</sup>Unlike earlier sections describing incident and prevalent capture of confounding conditions from diagnosis, procedure, and drug codes, this section captures additional prevalent conditions from demographic data (race and imputed race), diagnosis codes (BMI categories), and vitals data (remaining variables).

<sup>1</sup>Eligible Members and Member-Years are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.

<sup>2</sup>Unlike sections in other tables describing incident and prevalent capture of confounding conditions from diagnosis, procedure, and drug codes (i.e., those labeled "Incident Capture (365-Day Washout) of Confounding Conditions" and "Prevalent Capture of Confounding Conditions"), this section captures additional prevalent conditions from demographic data (race and imputed race), diagnosis codes (BMI categories), and vitals data (remaining variables). Not all variables are included in this table.

<sup>3</sup>If race is not reported, reported race is classified as "Unknown" which is a non-missing value in the Sentinel Database. The purpose of the "Has non-missing reported race" cohort was to describe all enrollees in the data with at least one encounter qualifying the inclusion criteria during 2020-2021.

<sup>4</sup>Only four DPs impute race; for all other DPs, imputed race data is unavailable. DPs have their own methods of imputing and race may not be imputed for all enrollees. DPs can impute the race of any enrollee, regardless of whether their reported race is "Unknown." As a result, even among DPs that perform imputation, enrollees with any value for reported race may receive any imputed race value, including "Unknown," or may have missing imputed race.

\*\*\*\*\*Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

N/A, Not Applicable.

Data represented by NaN (Not a Number) is due to their inability to be calculated.

**Table 7. Summary of Exposures of Interest in the Sentinel Distributed Database from January 1, 2020 to December 31, 2021, by Race and Age Group**

	Members with an Index Date	Eligible Members <sup>1</sup>	Number of Members with an Index Date per 10K Eligible Members <sup>1</sup>	Total Number of Index Dates	Eligible Member Years <sup>1</sup>
≥ 65 years	100,766	102,459	9,834.76	100,766	N/A

<sup>1</sup>Eligible Members and Member-Years are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.

<sup>2</sup>Unlike sections in other tables describing incident and prevalent capture of confounding conditions from diagnosis, procedure, and drug codes (i.e., those labeled "Incident Capture (365-Day Washout) of Confounding Conditions" and "Prevalent Capture of Confounding Conditions"), this section captures additional prevalent conditions from demographic data (race and imputed race), diagnosis codes (BMI categories), and vitals data (remaining variables). Not all variables are included in this table.

<sup>3</sup>If race is not reported, reported race is classified as "Unknown" which is a non-missing value in the Sentinel Database. The purpose of the "Has non-missing reported race" cohort was to describe all enrollees in the data with at least one encounter qualifying the inclusion criteria during 2020-2021.

<sup>4</sup>Only four DPs impute race; for all other DPs, imputed race data is unavailable. DPs have their own methods of imputing and race may not be imputed for all enrollees. DPs can impute the race of any enrollee, regardless of whether their reported race is "Unknown." As a result, even among DPs that perform imputation, enrollees with any value for reported race may receive any imputed race value, including "Unknown," or may have missing imputed race.

\*\*\*\*\*Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

N/A, Not Applicable

Data represented by NaN (Not a Number) is due to their inability to be calculated.

<sup>1</sup>Cohorts are formed by first evaluating enrollment and demographic requirements as well as index events among members, then evaluating index dates, pre-index history, and post-index follow-up among episodes. Because of this, the number remaining often increases from the member- to episode-level steps.

<sup>2</sup>Unlike earlier sections describing incident and prevalent capture of confounding conditions from diagnosis, procedure, and drug codes, this section captures additional prevalent conditions from demographic data (race and imputed race), diagnosis codes (BMI categories), and vitals data (remaining variables).

\*\*\*\*\*Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

N/A means Not Applicable.

<sup>1</sup>Unlike sections in other tables describing incident and prevalent capture of confounding conditions from diagnosis, procedure, and drug codes (i.e., those labeled "Incident Capture (365-Day Washout) of Confounding Conditions" and "Prevalent Capture of Confounding Conditions"), this section captures additional prevalent conditions from demographic data (race and imputed race), diagnosis codes (BMI categories), and vitals data (remaining variables). Not all variables are included in this table.

<sup>2</sup>If race is not reported, reported race is classified as "Unknown" which is a non-missing value in the Sentinel Database. The purpose of the "Has non-missing reported race" cohort was to describe all enrollees in the data with at least one encounter qualifying the inclusion criteria during 2020-2021.

<sup>3</sup>Only four DPs impute race; for all other DPs, imputed race data is unavailable. DPs have their own methods of imputing and race may not be imputed for all enrollees. DPs can impute the race of any enrollee, regardless of whether their reported race is "Unknown." As a result, even among DPs that perform imputation, enrollees with any value for reported race may receive any imputed race value, including "Unknown," or may have missing imputed race.

\*\*\*\*\*Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

N/A means Not Applicable.

## Appendix H.1 Design Diagram of Cohort Entry Requirements for Incident Condition Cohorts

## Appendix H.2 Design Diagram of Cohort Entry Requirements for Prevalent Condition and Other Specified Cohorts

### Design Diagram: Prevalent Condition and Vitals Data Cohorts<sup>1</sup>

<sup>1</sup>The above diagram applies to the prevalent condition cohorts as well as the has\_diag\_bmi, obesity\_diag\_bmi, overweight\_diag\_bmi, has\_height, has\_weight, has\_dia\_bp, and has\_sys\_bp cohorts.

#### <sup>2</sup>Baseline Characteristics

Age, sex, race, Hispanic, year for all cohorts and tobacco use and tobacco type for smoking cohorts.

#### Strata

- 1) Year
- 2) Age group (0-17, 18-43, 44-64, and 65+), year
- 3) Sex, year

### Appendix H.3 Design Diagram of has\_vitals\_BMI, overweight\_vitals\_BMI, and obesity\_vitals\_BMI Cohorts (Age at Index $\geq 18$ Years)

#### Design Diagram: has\_vitals\_BMI, overweight\_vitals\_BMI, and obesity\_vitals\_BMI cohorts

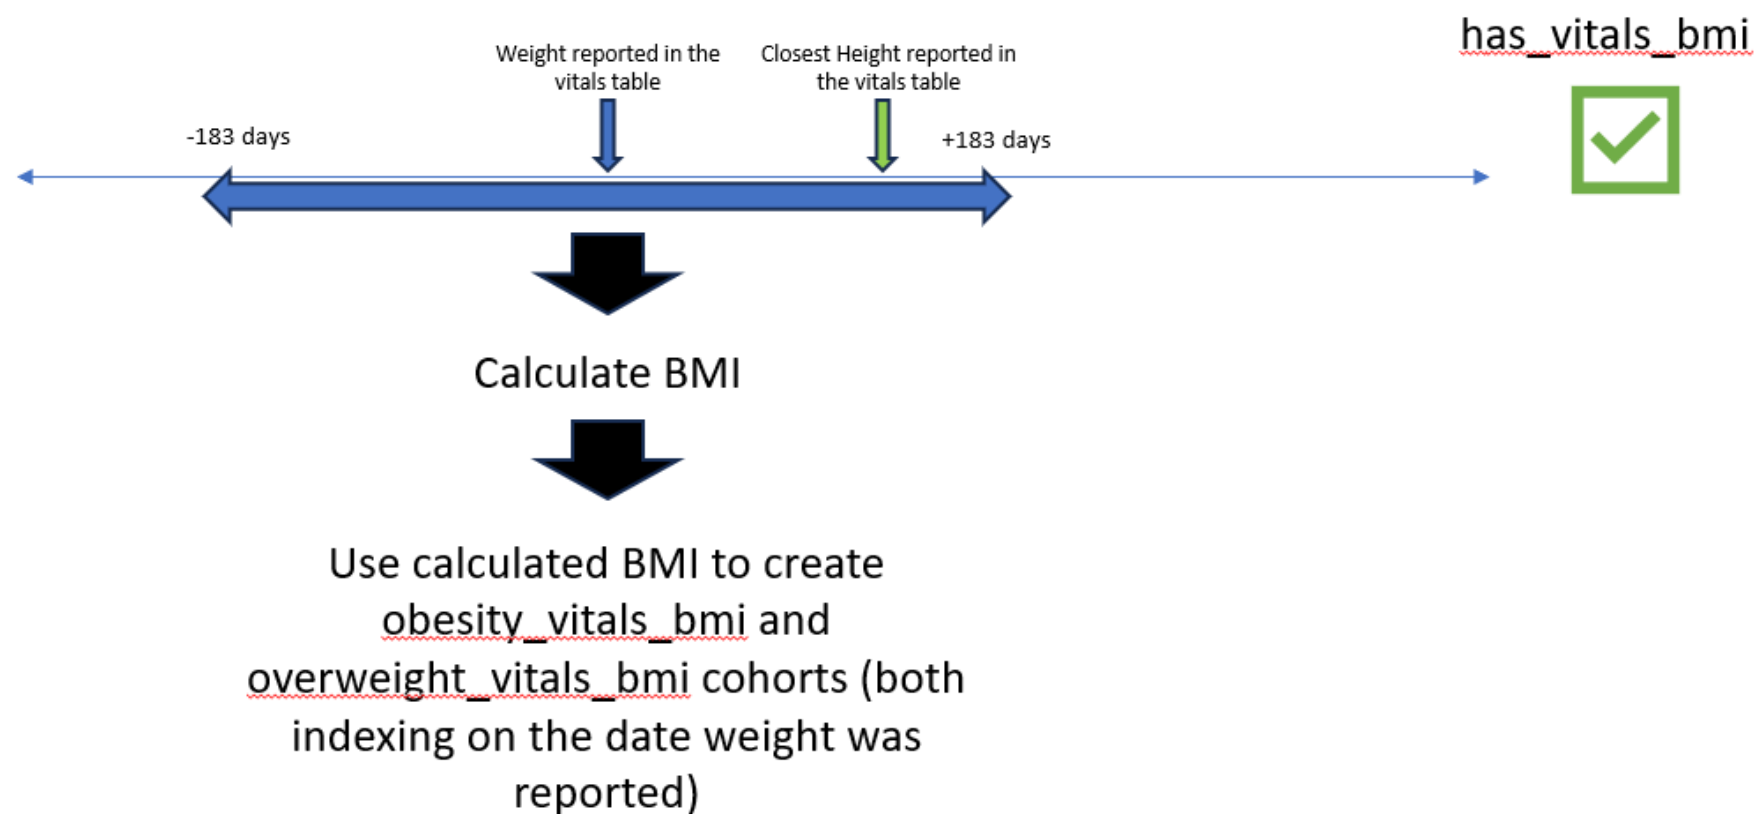

#### <sup>1</sup>Baseline Characteristics

Age, sex, race, Hispanic, year for all cohorts

#### Strata

- 1) Year
- 2) Age group (18-43, 44-64, and 65+), year
- 3) Sex, year
