

Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Overview for Request: cder mpl1r wp230

Request ID: cder_mpl1r_wp230

Request Description: In this report we examined counts of individuals and total available follow-up time for users of guselkumab, risankizumab, and tildrakizumab with plaque psoriasis and users of brodalumab in the Sentinel Distributed Database (SDD). Specifically, among users of brodalumab, we described exposure episodes by number of dispensings, total days supply and total amount supplied. This is the second report of an ongoing plan to monitor uptake of these drugs until sufficient follow-up time accrues among treated patients to conduct propensity-score-matched analyses examining non-Hodgkin lymphoma in users of guselkumab, risankizumab, and tildrakizumab versus users of a comparator drug, as well as serious infection, acute myocardial infarction/stroke, and inpatient neutropenia in users of brodalumab versus users of a comparator drug.

Sentinel Routine Querying Module: Cohort Identification and Descriptive Analysis (CIDA) module, version 11.3.0

<u>Data Source:</u> We distributed this query to six Sentinel Data Partners on August 16, 2022. Data from Medicare patients having both fee-for-service medical coverage and Part D drug coverage are included. Some participating Data Partners also include patients enrolled in Medicare Advantage plans. The study period included data from February 15, 2017 through February 28, 2022 (most recent end date of available data). Please see Appendix A for a list of dates of available data for each Data Partner.

Study Design: We identified individuals with incident use of guselkumab, risankizumab, tildrakizumab or brodalumab, among a cohort 18 years of age and older, and characterized use and dispensing patterns by examining the first valid exposure episode (index exposure). For guselkumab, risankizumab, and tildrakizumab, users also had evidence of plaque psoriasis in the 183 days prior to and including the date of their index dispensing. In addition, we excluded individuals with evidence of ulcerative colitis, Crohn's disease, psoriatic arthritis, rheumatoid arthritis, ankylosing spondylitis, juvenile rheumatoid arthritis, hidradenitis suppurativa or any cancer (except non-melanoma skin cancer) in the 183 days prior to and including the date of index. We did not apply any of these additional inclusion/exclusion criteria to the brodalumab cohort. This is a Type 2 analysis in the Query Request Package (QRP) documentation.

Exposures of Interest: We defined the exposures of interest, guselkumab, risankizumab, tildrakizumab and brodalumab, using outpatient dispensing data, National Drug Codes (NDCs) and Healthcare Common Procedure Coding System (HCPCS) codes. For guselkumab, risankizumab, and tildrakizumab, we defined new use as no prior use of guselkumab, risankizumab, or tildrakizumab respectively in the 183 days prior to the first qualifying dispensing (index). For brodalumab, we defined new use as no prior use of brodalumab in the 30 days prior to the first qualifying index dispensing. Each qualifying dispensing (index) was identified for men and women meeting the inclusion criteria; cohort re-entry was not allowed. Please see Appendix B for a list of generic and brand names of medical products and Appendix C for the HCPCS procedure codes used to define the exposures for this request.

<u>Cohort Eligibility Criteria:</u> We required members to be enrolled in health plans with medical and drug coverage in the 183 days prior to their index date (30 days prior to their index date for brodalumab users) in order to be included in the cohort; a gap in coverage of 45 days was allowed and treated as continuous enrollment. The following age groups were included in the cohort: 18 - 24, 25 - 34, 35 - 44, 45 - 54, 55 - 64, 65 - 74, 75 years of age and older.

For the guselkumab, risankizumab, and tildrakizumab cohorts, we required evidence of a plaque psoriasis diagnosis in the 183 days prior to and including the date of the index dispensing. We excluded patients with evidence of ulcerative colitis, Crohn's disease, psoriatic arthritis, rheumatoid arthritis, ankylosing spondylitis, juvenile rheumatoid arthritis, hidradenitis suppurativa or any cancer (except non-melanoma skin cancer) in the 183 days prior to and including the date of the index dispensing using International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes. For the brodalumab cohort, no additional inclusion/exclusion criteria were applied. See Appendix D for a list of the ICD-10-CM diagnosis codes used to define the inclusion and exclusion criteria.

<u>Follow-up Time:</u> For all cohorts, follow-up began on the day of the index dispensing and continued until the first occurrence of any of the following: 1) disenrollment; 2) death; 3) the end of the data provided by each Data Partner; or 4) the end of the query period.

cder_mpl1r_wp230 Page 1 of 104

Overview for Request: cder_mpl1r_wp230

For brodalumab users, we created exposure episodes based on the number of days of product supplied per dispensing in the outpatient pharmacy dispensing data. We bridged together episodes less than 60 days apart and added 60 days to the end of each episode. In addition to the censoring criteria listed above, follow-up time was also censored on the initiation of a comparator drug identified using NDC, HCPCS and Current Procedural Terminology, Fourth Edition (CPT-4) procedure codes. Please see Appendix E for a list of generic and brand names of medical products, and Appendix F for the HCPCS and CPT-4 codes used to define the comparator drugs for this request.

<u>Baseline Characteristics</u>: For all cohorts, we assessed the following characteristics at index: age, sex, race, Hispanic ethnicity, and year of the index dispensing. For the guselkumab, risankizumab, and tildrakizumab cohorts, we additionally examined the distribution of the individual ICD-10-CM diagnosis codes for plaque psoriasis in the 183 days prior to and including the day of index.

For the brodalumab cohort, we additionally assessed the following health characteristics in the 30 days prior to and including the index date: ulcerative colitis, Crohn's disease, psoriatic arthritis, rheumatoid arthritis, ankylosing spondylitis, juvenile rheumatoid arthritis, hidradenitis suppurativa, and plaque psoriasis using ICD-10-CM diagnosis codes. Please see Appendix G for the list of ICD-10-CM diagnosis codes used to define the baseline characteristics for this request.

<u>Limitations:</u> Algorithms used to define exposures and inclusion and exclusion criteria are imperfect; thus, it is possible that there may be misclassification. Therefore, data should be interpreted with these limitations in mind.

<u>Notes:</u> Please contact the Sentinel Operations Center (info@sentinelsystem.org) for questions and to provide comments/suggestions for future enhancements to this document. Glossary of Terms for Analyses Using Cohort Identification and Descriptive Analysis (CIDA) Module*

Amount Supplied - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

Blackout Period - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

Care Setting - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Charlson/Elixhauser Combined Comorbidity Score - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

Code Days - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

Cohort Definition (drug/exposure) - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

Computed Start Marketing Date - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

Days Supplied - number of days supplied for all dispensings in qualifying treatment episodes.

Eligible Members - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

Enrollment Gap - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

Episodes - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

Episode Gap - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

Event Deduplication - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

Exposure Episode Length - number of days after exposure initiation that is considered "exposed time."

Exposure Extension Period - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

Lookback Period - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

Maximum Episode Duration - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

cder_mpl1r_wp230 Page 5 of 104

Member-Years - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

Minimum Days Supplied - specifies a minimum number of days in length of the days supplied for the episode to be considered. **Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Monitoring Period - used to define time periods of interest for both sequential analysis and simple cohort characterization **Principal Diagnosis (PDX)** - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

Query Period - period in which the modular program looks for exposures and outcomes of interest.

Switch Evaluation Step Value - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

Switch Gap Inclusion Indicator - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

Switch Pattern Cohort Inclusion Date - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

Switch Pattern Cohort Inclusion Strategy - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

Treatment Episode Truncation Indicator - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

Washout Period (drug/exposure) - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

Washout Period (event/outcome) - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

Years at Risk - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

Appendix H. Specifications Defining Parameters in this Request

This request executed the Cohort Identification and Descriptive Analysis (CIDA) tool [version 11.3.0] to estimate follow-up time for users of guselkumab, risankizumab, and brodalumab with plaque psoriasis in the Sentinel Distributed Database (SDD).

Coverage requirement: Medical & Drug Coverage

Enrollment gap: 45 days

Age groups (years): 18-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75+

Stratifications: Age group, Sex, Calendar year

Follow-up time output categorization: N/A

Restrictions: None

Envelope macro: Reclassify encounters during inpatient stay as inpatient

Distribution of index-defining codes: Yes

Never-exposed cohort: No

Freeze data: No
