

## Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

If you are using a web page screen reader and are unable to access this document, please contact the Sentinel Operations Center for assistance at [info@sentinelssystem.org](mailto:info@sentinelssystem.org).

## Overview for Requests cder\_mpl2p\_wp061 and cder\_mpl1p\_wp115

**Request IDs:** cder\_mpl2p\_wp061, cder\_mpl1p\_wp115

**Request Description:** This analysis (executed via requests cder\_mpl2p\_wp061 and cder\_mpl1p\_wp115) aimed to assess the risk of incident renal cell carcinoma (RCC) among adult initiators of canagliflozin (CANA) with evidence of type 2 diabetes mellitus, had they been randomized to initiate CANA or a comparator drug sitagliptin (SITA) and to achieve at least 180 days of exposure in the first year of follow-up (treatment strategy of interest). We used a clone-censor-weighting design to conduct this analysis. Treatment propensity score-based weighting was applied to emulate randomization to the initiator groups, and inverse-probability-of-censoring weighting (IPCW) was used to account for potential selection bias due to artificial censoring associated with treatment strategy non-adherence. We estimated the RCC hazard ratio we would have observed had all CANA initiators been randomized to CANA versus SITA and accrued at least 180 days of exposure in the first year of follow-up in the Sentinel Distributed Database (SDD). A follow-up query (cderr\_mpl1p\_wp115) assessed the distribution of post-treatment IPCW and inverse probability of treatment (IPT)/IPCW-weighted covariates among individuals with at least 360 days of follow-up, and examined outcome models adjusted using inverse-probability-of-treatment weighting (IPTW) and IPCW individually rather than using the combined weight.

**Sentinel Routine Querying Module:** Cohort Identification and Descriptive Analysis (CIDA) module, version 14.2.0, with Propensity Score Analysis module and custom programming.

**Data Source:** We distributed the initial query to six Sentinel Data Partners (DP) on November 6, 2025. These six Data Partners are a subset of the SDD. Data from Medicare patients having both fee-for-service medical coverage and Part D drug coverage are included. The study period included data from March 1, 2013 (CANA approval) through the most recent available data at each DP (maximum data availability: March 31, 2025). Please see Appendix A for a list of dates of available data for each Data Partner.

**Study Design:** We identified individuals with type 2 diabetes mellitus, age 18 years and older, who initiated CANA or SITA after a 365-day washout period and who met all eligibility criteria (see “Cohort Eligibility”) during the 365-day baseline period. We evaluated the occurrence of RCC in all available data after initiation of study drug until the end of follow-up (see “Follow-up Time”). We implemented a Type 2 analysis using the Propensity Score Analysis (PSA) module in the Query Request Package (QRP), supplemented by custom programming.

We used a clone-censor-weighting approach to identify and analyze the two primary treatment strategies of interest:  $\geq 180$  days of cumulative exposure to CANA or  $\geq 180$  days of cumulative exposure to SITA within one year of initiation. Specifically, this initial period of follow-up was divided into four 90-day intervals, during which we assessed cumulative exposure (see “Exposures and Comparators of Interest” for further details), allowing for gaps between dispensings. We created two clones for each CANA and SITA initiator, one each assigned to a  $< 180$  and  $\geq 180$  day treatment strategy (CANA  $< 180$ , CANA  $\geq 180$ , SITA  $< 180$ , SITA  $\geq 180$ ); clones were artificially censored at the end of an interval if they deviated from their assigned treatment strategy (i.e., achieved  $\geq 180$  days of exposure for  $< 180$ -day clones; exhausted days remaining to accumulate  $\geq 180$  days of exposure by day 360 for  $\geq 180$ -day clones). Remaining person-time for each artificially censored clone was excluded from the analysis after censoring.

### Overview for Requests cder\_mpl2p\_wp061 and cder\_mpl1p\_wp115

To emulate randomization of CANA initiators to SITA vs. CANA, we estimated treatment propensity scores (tPS) as a function of demographic and clinical characteristics measured within 365 days prior to the index date. Stabilized tPS-based weights were used to estimate the "average treatment effect in the treated (ATT)" (CANA initiators), with ATT weights truncated at the 1st and 99th percentile of the weight distribution. We used inverse probability of censoring weights (IPCW) to account for potential selection bias due to artificial censoring, in the event that RCC and adherence share common predictors. We modeled the probability of not being censored (cPS) in each interval for each treatment strategy using logistic regression, conditional on time interval, baseline characteristics, and time-varying post-index covariates assessed in each interval (see "Patient Characteristics" for further detail). The IPCW in each interval was the cumulative product of  $1/cPS$ .

The time-varying IPCW was multiplied by the ATT weight, and the combined weight was truncated at the 1st and 99th percentile of the weight distribution. ATT/IPC-weighted hazard ratios (HRs) were estimated for all treatment strategies compared to the SITA  $\geq 180$  treatment strategy. Bootstrapping was used to estimate robust 95% confidence intervals (CIs) for HRs, and results from DPs were meta-analyzed (see "Analysis").

**Exposures and Comparators of Interest:** An individual's first eligible initiation of CANA or SITA was defined as their index date. For the CANA cohort, we defined incident exposure based on no evidence of any sodium-glucose cotransporter-2 inhibitor (SGLT-2i) in the previous 365 days. For the SITA cohort, we defined incident exposure based on no evidence of any dipeptidyl peptidase-4 inhibitor (DPP-4i) in the previous 365 days.

The primary treatment strategy of interest was defined as achieving at least 180 days of cumulative exposure to CANA in the year following initiation; the primary comparator strategy was defined as achieving at least 180 days of cumulative exposure to SITA in the year following initiation.

Exposures and cumulative exposure duration were assessed using outpatient dispensings using National Drug Codes (NDCs). Achievement of 180 days of exposure was based on native days' supply associated with each dispensing, with stockpiling applied within each exposure group to adjust overlapping prescriptions. No bridging or episode extension was implemented. A 360-day "assessment window" to achieve 180 days of exposure was selected based on prior feasibility work in cder\_mpl1p\_wp107.

A secondary exposure strategy of interest was achieving at least 180 days of cumulative exposure to any SGLT-2i product.

Please refer to Appendix B for non-proprietary and proprietary names of medical products used to define exposures. Any NDCs used to define exposure were also searched for in the procedure table and used for washouts and drug-related exclusion criteria.

## Overview for Requests cder\_mpl2p\_wp061 and cder\_mpl1p\_wp115

**Outcomes of Interest:** We defined the primary event of interest, referred to as narrow RCC, based on previously developed algorithms<sup>1,2</sup>, for identifying early- or late-stage RCC (analyzed as a composite outcome).

Individuals with early RCC<sup>1</sup> were required to meet all of the following criteria:

- ≥2 non-metastatic RCC International Classification of Diseases, Ninth Revision (ICD-9), Clinical Modification (ICD-9-CM) or Tenth Revision (ICD-10), Clinical Modification (ICD-10-CM) diagnosis codes within 60 days, where the event date was considered the earliest diagnosis code date.
- ≥1 ICD-10-CM diagnosis or Current Procedural Terminology, Fourth Edition (CPT-4) procedure code for diagnostic workup (e.g., imaging, blood work, pathology) within [-180, -1] days before the event date
- ≥1 CPT-4, Healthcare Common Procedure Coding System (HCPCS), or ICD-9 or -10 Procedure Coding System (ICD-9-PCS, ICD-10-PCS) procedure code for surgery or ablation<sup>1,3</sup> within [1, 120] days after the event date

Individuals with late RCC<sup>2</sup> were required to meet all of the following criteria:

- ≥1 RCC ICD-9 or 10-CM diagnosis code AND ≥1 metastatic RCC (mRCC) ICD-9 or 10-CM diagnosis code within [-30, +60] days of the RCC code. The event date was considered the earliest RCC or mRCC diagnosis code date.
- ≥1 ICD-10-CM diagnosis code or CPT-4 procedure code for diagnostic workup or ≥1 ICD-9 or 10-CM diagnosis code for metastatic disease symptoms within [-180, +30] days from the event date
- ≥1 of the following [1, 120] days after the event date:
  - ≥1 HCPCS, CPT or ICD-9 or 10-PCS procedure code for systemic chemotherapy, radiation, or surgery
  - ≥1 NDC, CPT-4 or HCPCS code for RCC chemotherapy<sup>4</sup>
  - Mortality.

Please see Appendix C for the specific procedure and diagnosis codes used to define outcomes, and Appendix D for names of medical products used to define RCC chemotherapy in this request.

**Cohort Eligibility Criteria:** We required members to be enrolled in health plans with medical and drug coverage for at least 365 days prior to their index date, during which gaps in coverage of up to 45 days were allowed.

Eligible individuals had to additionally meet all the following criteria in the 365-day baseline period prior to the index date (unless otherwise noted):

- Type 2 diabetes mellitus, defined as:
  - ≥1 diagnosis code for type 2 diabetes mellitus
  - No diagnosis codes for type 1 diabetes mellitus
  - ≥1 NDC or procedure code for an oral antidiabetic drug
- No evidence of stage III-V chronic kidney disease (CKD) or dialysis
- No evidence of prior kidney cancer or nephrectomy in all available history, defined as:
  - ≥2 kidney neoplasm diagnosis codes or
  - ≥1 code for personal history of kidney cancer or
  - ≥1 code for acquired absence of kidney
- No evidence of the comparator drug class (SGLT-2i or DPP-4i)
- No evidence of SGLT-2i/DPP-4i combination products
- No evidence of prior glucagon-like peptide-1 receptor agonist (GLP-1RA, including gastric inhibitory peptide [GIP]/GLP-1RA combination products)

See Appendix E for a list of non-proprietary and proprietary names of medical products and Appendix F for the diagnosis and procedure codes used to define inclusion and exclusion criteria for this request.

## Overview for Requests cder\_mpl2p\_wp061 and cder\_mpl1p\_wp115

**Follow-up Time:** Follow-up began on the day after the index dispensing and continued until the first occurrence of any of the following: 1) disenrollment; 2) death; 3) the end of data availability; 4) the end of the query period; 5) occurrence of RCC; 6) initiation of the comparator drug class or an SGLT-2i/DPP-4i combination product; or 7) evidence of stage III-V CKD or dialysis.

The first year of follow-up was additionally discretized into four 90-day intervals, during which we conducted a time-varying assessment of cumulative exposure duration (based on native days' supply, see "Exposures and Comparators of Interest") and select time-varying covariates thought to be associated with adherence and RCC risk (see "Patient Characteristics"). Adherence to the treatment strategies of interest was assessed at the end of each interval. See "Study Design" for further details.

See Appendices G and H for codes used for censoring.

**Patients Characteristics:** We assessed the following characteristics during the 365 days before the index date (unless otherwise noted):

- demographics (age at index, year at index, sex, race, ethnicity),
- Combined Comorbidity score<sup>5</sup>, claims-based frailty score<sup>6</sup>, adapted Diabetes Complication Severity Index score (aDCSI)<sup>7</sup>,
- health service utilization (number of emergency department [ED] visits, number of ambulatory visits [AV], number of inpatient [IP] encounters),
- clinical characteristics (retinopathy, nephropathy, neuropathy, hypoglycemia, hyperglycemia, hypertension, dyslipidemia, coronary artery disease [CAD], cerebrovascular disease [CVD], peripheral vascular disease [PVD], congestive heart failure [CHF], chronic obstructive pulmonary disease [COPD], depression, obesity, malignancy, hepatitis C, kidney stones, sickle cell disease),
- smoking/nicotine use, alcohol use,
- diabetic medication use (metformin, sulfonylureas, thiazolidinediones [TZDs], alpha-glucosidase inhibitors, meglitinides, insulins),
- number and type of cardiovascular medications (including angiotensin converting enzyme inhibitors [ACEis], angiotensin receptor blocker [ARBs], beta blockers, calcium channel blockers [CCBs], statins, diuretics, aspirin/acetaminophen/other nonsteroidal anti-inflammatory drugs [NSAIDs]),
- influenza vaccine, and
- pneumococcal vaccine (in all available history).

The following time-varying characteristics were evaluated post-index in time intervals [0, 89], [90, 179], and [180, 269] days post-index and included along with baseline covariates in the IPCW model:

- retinopathy,
- nephropathy,
- neuropathy,
- any IP principal or ED claims or lab values for hyperglycemia (fasting glucose  $\geq 125$  mg/dl, non-fasted glucose  $\geq 180$  mg/dl),
- new insulin use (defined as first use after a 365-day washout),
- new GLP1-RA use, including GIP/GLP-1RAs,
- flu vaccine,
- pneumococcal vaccine,
- any frailty indicators (including anti-dementia drugs, loop diuretics, digoxin, and wheelchair or home hospital bed claims),
- any preventive healthcare use (including cancer screening [colon, breast, prostate, cervical], bone mineral density screening, eye exams, anti-glaucoma drug use, and lipid panel tests),
- any hemoglobin A1c (HbA1c) test,
- number of AV encounters,
- any ED visits,
- any IP visits, and
- an increase in the number of cardiovascular medications over the prior interval.

### Overview for Requests cder\_mpl2p\_wp061 and cder\_mpl1p\_wp115

The following characteristics assessed on days [1, 360] post-index were evaluated descriptively among individuals remaining in the database on day 360 post-index (individuals lost-to-follow-up or experiencing events before that time are not included):

- retinopathy,
- nephropathy,
- neuropathy,
- number of IP principal or ED claims for hypoglycemia (0, 1, 2+),
- number of IP principal or ED claims for hyperglycemia (0, 1, 2+),
- hypertension,
- dyslipidemia,
- CAD,
- CVD,
- PVD,
- CHF,
- obesity,
- any HbA1c test,
- new GLP1-RA use, including GIP/GLP-1RAs,
- any frailty indicators,
- any preventive healthcare use,
- number of AV encounters (<5, 5-10, 11+),
- number of ED visits (0, 1, 2+),
- number of IP visits (0, 1, 2+).

**Secondary Analyses:** Three secondary analyses were conducted using the secondary treatment strategy of interest ( $\geq 180$  days of cumulative exposure to SGLT-2is in the first year after initiation) and secondary outcome definition (broad RCC), or both. The secondary outcome definition was based on 2 or more RCC diagnosis codes (any stage) within 60 days<sup>8</sup>, with the event date being the earliest RCC diagnosis code.

**Sensitivity Analyses:** Two sensitivity analyses were conducted for the primary analysis additionally censoring on 1) diagnosis with a non-RCC malignancy (excluding non-melanoma skin cancer) and 2) initiation of a GLP-1RA or GIP/GLP-1RA (any use after index) or new insulin use (first use in 365 days).

**Subgroup Analyses:** Subgroups of interest included: sex, age  $\geq 65$  years, and obesity. Propensity scores were re-estimated within each subgroup.

## Overview for Requests cder\_mpl2p\_wp061 and cder\_mpl1p\_wp115

**Propensity Score Estimation:** We included the following baseline characteristics in the treatment propensity score: age (including squared and cubic polynomials), sex, calendar year (grouping years  $\geq 2019$ ), retinopathy, nephropathy, neuropathy,  $\geq 1$  inpatient principal or emergency department claim or lab value for hyperglycemia, hypertension, dyslipidemia, CAD, CVD, PVD, CHF, COPD, depression, obesity, cancer, kidney stones, smoking, alcohol use, metformin, sulfonylureas, TZDs, insulin, cardiovascular medications (by class), flu vaccination, ever prior pneumococcal vaccination, number of ED visits, number of AV visits, number of IP encounters, comorbidity index categories, aDCSI score categories, and frailty.

The Propensity Score Analysis (PSA) module in the QRP was used to calculate the baseline treatment propensity scores and produce weighted cohorts within each Data Partner in order to estimate the average treatment effect in the CANA initiators (or SGLT-2i initiators, in secondary analyses). Truncation was implemented for weights above the 99th and below the 1st percentile of the weight distribution. See Appendix I for a list of non-proprietary and proprietary names of medical products and Appendix J for the diagnosis and procedure codes used to define covariates for this request.

The additional time-varying post-index covariates listed under “Patient Characteristics” were assessed in each 90-day follow-up interval and used to estimate the censoring propensity score (cPS) for artificial censoring using pooled logistic regression with custom programming. Separate cPS models were estimated for each treatment strategy of interest. The IPCW in each interval was the cumulative product of  $1/\text{cPS}$ . The time-varying IPCW was multiplied by the stabilized ATT weight; the combined weight was truncated at the 1st and 99th percentile.

**Analysis:** Each initiator had all dispensing, outcome, and covariate data duplicated and was assigned to two mutually-exclusive treatment strategies in the “cloned” data:  $< 180$  days of cumulative exposure and  $\geq 180$  days cumulative exposure within the first year of initiation. Programming was used to create a “long format” dataset, with multiple records per clone covering days 0-89, 90-179, 180-269, 270-359, and  $\geq 360$  post-initiation. Adherence to the assigned treatment strategy was assessed on days 179, 269, and 359 post-index. All follow-up time prior to artificial censoring, RCC, or regular censoring was included in analyses, with individuals able to contribute to both treatment strategies prior to day 360.

Covariate balance before and after ATT weighting was assessed for the CANA and SITA cohorts using standardized mean differences (SMDs), with absolute SMDs  $> 0.1$  used to define imbalance. As part of the follow-up query, covariate balance before and after IPCW and ATT/IPCW was included as an *ad hoc* assessment among individuals who survived event-free until at least day 360.

We report the crude and ATT/IPC-weighted number of clones, event counts, person-time at risk, and incidence rates. We used Cox proportional hazards regression models to estimate crude and ATT/IPC-weighted hazard ratios for RCC, with the  $\geq 180$  days of SITA exposure treatment strategy serving as the reference group for all other treatment strategies. Bootstrapping with 500 replicates was performed at each Data Partner to generate a robust 95% confidence interval (CI) for the hazard ratio. As a sensitivity analysis, 95% CIs were also estimated based on the robust standard error sandwich estimator.

Results from each Data Partner were combined using meta-analysis to produce summary hazard ratios and 95% CIs with both random and fixed effects models.

Kaplan-Meier curves with 95% CIs were also generated for crude and ATT/IPC-weighted data; no bootstrapping or robust standard error estimation was implemented for Kaplan-Meier estimates.

Please see Appendices K-K.3 for the specifications of parameters used in this request and Appendix L for the design diagram.

## Overview for Requests cder\_mpl2p\_wp061 and cder\_mpl1p\_wp115

**Limitations:** Algorithms used to define exposures, outcomes, covariates and inclusion criteria are imperfect; thus, it is possible that there may be misclassification. Therefore, data should be interpreted with this limitation in mind. Interpretation of our findings as a hypothetical target trial depends on meeting standard causal identifiability criteria. In particular, conditional exchangeability is unlikely to be met when using administrative data due to unmeasured or mismeasured covariates. Model misspecification is also possible for both propensity score and outcome models.

The study design did not use IPCW to account for censoring due to other potentially informative end-of-follow-up criteria, including CKD and dialysis, nor did it account for competing risks. Limited duration of follow-up prevented evaluation of longer duration treatment strategies and more complex/dynamic treatment strategies. Lastly, diagnostics for IPCW performance are the subject of ongoing research.<sup>9,10</sup> Individuals lost to follow-up or experiencing events before day 360 were not included in assessments of post-index covariate balance, nor were balance assessments conducted in a time-varying manner.

**Notes:** Please contact the Sentinel Operations Center (info@sentinel-system.org) for questions and to provide comments/suggestions for future enhancements to this document. For more information on the specific routine querying module utilized in this query, please refer to the documentation on Type 2 analyses using the Propensity Score Analysis module within our documentation library accessible at <https://dev.sentinel-system.org/projects/SENTINEL/repos/sentinel-routine-querying-tool-documentation/browse>

## Glossary of Terms for Analyses Using Cohort Identification and Descriptive Analysis (CIDA) Module\*

**Amount Supplied** - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

**Blackout Period** - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

**Care Setting** - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

**Ambulatory Visit (AV)** - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

**Emergency Department (ED)** - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

**Inpatient Hospital Stay (IP)** - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

**Non-Acute Institutional Stay (IS)** - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

**Other Ambulatory Visit (OA)** - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

**Charlson/Elixhauser Combined Comorbidity Score** - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).

**Code Days** - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.

**Cohort Definition (drug/exposure)** - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

**Computed Start Marketing Date** - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.

**Days Supplied** - number of days supplied for all dispensings in qualifying treatment episodes.

**Eligible Members** - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.

**Enrollment Gap** - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

**Episodes** - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

**Episode Gap** - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

**Event Deduplication** - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

**Exposure Episode Length** - number of days after exposure initiation that is considered "exposed time."

**Exposure Extension Period** - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.

**Lookback Period** - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

**Maximum Episode Duration** - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Member-Years** - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

**Minimum Days Supplied** - specifies a minimum number of days in length of the days supplied for the episode to be considered.

**Minimum Episode Duration** - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

**Monitoring Period** - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.

**Principal Diagnosis (PDX)** - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

**Query Period** - period in which the modular program looks for exposures and outcomes of interest.

**Switch Evaluation Step Value** - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).

**Switch Gap Inclusion Indicator** - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.

**Switch Pattern Cohort Inclusion Date** - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.

**Switch Pattern Cohort Inclusion Strategy** - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.

**Treatment Episode Truncation Indicator** - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

**Washout Period (drug/exposure)** - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

**Washout Period (event/outcome)** - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

**Years at Risk** - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

\*all terms may not be used in this report

## **Glossary of Terms for Analyses Using Propensity Score Analysis (PSA) Module\***

**Covariate** - requester defined binary variable to include in the propensity score estimation model (e.g., diabetes, heart failure, etc.) during requester-defined lookback period. Requester may also choose to add any of the following categorical, continuous, or count metrics to the propensity score estimation model:

1. Age (continuous)
2. Sex
3. Time period (i.e., monitoring period for sequential analyses)
4. Year of exposure
5. Comorbidity score
6. Medical utilization – number of inpatient stays
7. Medical utilization – number of institutional stays
8. Medical utilization – number of emergency department visits
9. Medical utilization – number of outpatient visits
10. Health care utilization – number of other ambulatory encounters (e.g., telemedicine, email consults)
11. Drug utilization – number of dispensings
12. Drug utilization – number of unique generics dispensed
13. Drug Utilization – number of unique drug classes dispensed

**Covariate Evaluation Window** - specified number of days relative to index date to evaluate the occurrence of covariates of interest. Note: members are required to have continuous enrollment during the covariate evaluation window, regardless of the value included in the "Continuous enrollment before exposure" field.

**Individual Level Data Return** - program may return individual-level, de-identified datasets to the Sentinel Operations Center (SOC). While the datasets contain a single row per patient for each specified analysis, patient identifiers such as a patient ID are not included in the output. Individual-level datasets are returned to the SOC, aggregated, and used to calculate effect estimates via Cox (proportional hazards) regression.

**Mahalanobis Distance** - provides a measure of balance across all variables while accounting for their correlation.

**Matching Caliper** - maximum allowed difference in propensity scores between treatment and control patients. Requester may select any caliper (e.g., 0.01, 0.025, and 0.05).

**Matching Ratio** - patients in exposed and comparator groups are nearest neighbor matched by a 1:1 or 1:n (up to 10) matching ratio.

**Matched Conditional and Unconditional Analysis** - in a conditional matched analysis, a Cox model, stratified by Data Partner site and matched set, is run on the matched population. This can be done for both the both 1:1 and 1:n matched cohorts. In an unconditional analysis, a Cox model, stratified by Data Partner site only, is run on the matched population. This can be done for the 1:1 matched cohort only.

**Propensity Score Stratification** - option to stratify propensity scores based on requester-defined percentiles in the unmatched population. In a stratified analysis, a Cox model, stratified by Data Partner site, is run on the stratified population. Note that all patients identified in exposure and comparator cohorts are used in the analysis.

**PSM Tool** - performs effect estimation by comparing exposure propensity-score matched parallel new user cohorts. Propensity score estimation and matching are conducted within each Sentinel Data Partner site via distributed programming code; data are returned to the SOC, aggregated, and used to calculate effect estimates.

**Risk-set Level Data Return** - alternative to the patient-level data return approach. In this approach, the PSM tool will produce de-identified, risk-set level datasets instead of or in addition to individual-level output. Whereas each observation in the patient-level datasets represents one patient in the cohort, each observation in the risk set dataset represents one event. Risk sets are created at the Data Partner site, returned to the SOC, aggregated, and used to calculate effect estimates via case-centered logistic regression.

**Subgroup Analysis** - may be conducted using any requester-defined covariates. Subgroup analyses may be performed in the unmatched and the matched population.

**Zero Cell Correction** - indicator for whether to screen variables with a zero correction added to each cell in the confounder/outcome 2x2 table. Recommended when the number of exposed outcomes is fewer than 150.

| Post-Index GLP-1RA Initiation                                             | 34,282          | 21.6%   | 127,557     | 13.8%   | 7.710               | 0.203                   |
| Post-Index Insulin Initiation                                             | 20,015          | 12.6%   | 143,314     | 15.6%   | -2.973              | -0.086                  |

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\* Covariate included in the treatment and censoring propensity score logistic regression models.

\*\* Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup> Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup> Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

| Post-Index GLP-1RA Initiation                                             | 34,282          | 21.6%   | 25,354      | 16.1%   | 5.493               | 0.141                   |
| Post-Index Insulin Initiation                                             | 20,015          | 12.6%   | 22,362      | 14.2%   | -1.583              | -0.047                  |

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GLP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\* Covariate included in the treatment and censoring propensity score logistic regression models.

\*\* Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup> Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup> Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

| Post-Index Insulin Initiation                                             | 10,172          | 12.3%   | 65,144      | 15.0%   | -2.781              | -0.081                  |

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulintropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\* Covariate included in the treatment and censoring propensity score logistic regression models.

\*\* Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup> Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup> Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\* Covariate included in the treatment and censoring propensity score logistic regression models.

\*\* Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup> Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup> Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\* Covariate included in the treatment and censoring propensity score logistic regression models.

\*\* Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup> Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup> Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GLP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; DPP-4 = dipeptidyl peptidase-4; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma; SGLT-2 = sodium-glucose cotransporter-2.

**Notes:** Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

\*\*Time-varying covariate included in the censoring propensity score logistic regression model.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>Race and ethnicity data may not be completely populated at all Data Partners; therefore, data about race and ethnicity may be incomplete.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma.

**Notes:** Individuals lost to follow-up or experiencing events prior to day 360 are not captured. Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma.

**Notes:** Individuals lost to follow-up or experiencing events prior to day 360 are not captured. Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>For weighted data, aggregated standard deviations are calculated using the standard formula for unweighted data, and therefore represent an approximation.

<sup>3</sup>For weighted data, the standardized mean difference is calculated as the difference in weighted means or proportions divided by the pooled standard deviation across treatment groups. Note the pooled standard deviation is calculated using the standard formula for unweighted data, and therefore represents an approximation.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma.

**Notes:** Individuals lost to follow-up or experiencing events prior to day 360 are not captured. Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\* Covariate included in the treatment and censoring propensity score logistic regression models.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>For weighted data, aggregated standard deviations are calculated using the standard formula for unweighted data, and therefore represent an approximation.

<sup>3</sup>For weighted data, the standardized mean difference is calculated as the difference in weighted means or proportions divided by the pooled standard deviation across treatment groups. Note the pooled standard deviation is calculated using the standard formula for unweighted data, and therefore represents an approximation.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma.

**Notes:** Individuals lost to follow-up or experiencing events prior to day 360 are not captured. Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>For weighted data, aggregated standard deviations are calculated using the standard formula for unweighted data, and therefore represent an approximation.

<sup>3</sup>For weighted data, the standardized mean difference is calculated as the difference in weighted means or proportions divided by the pooled standard deviation across treatment groups. Note the pooled standard deviation is calculated using the standard formula for unweighted data, and therefore represents an approximation.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma.

**Notes:** Individuals lost to follow-up or experiencing events prior to day 360 are not captured. Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

**Abbreviations :** AV = ambulatory visit; CV = cardiovascular; Dx = diagnosis; ED = emergency department; GIP/GLP-1RA = glucose-dependent insulinotropic polypeptide / glucagon-like peptide-1 receptor agonist; GLP-1RA = glucagon-like peptide-1 receptor agonist; HbA1c = hemoglobin A1c; IP = inpatient; IPP = inpatient encounter, principal diagnosis; N = number; NaN = not a number; N/A = not applicable; NMSC = non-melanoma skin cancer; NSAIDs = nonsteroidal anti-inflammatory drugs; RCC = renal cell carcinoma.

**Notes:** Individuals lost to follow-up or experiencing events prior to day 360 are not captured. Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

Frailty indicators assessed in claims include dementia therapies, loop diuretics, digoxin, and wheelchair/home hospital bed claims.

Preventive healthcare assessed in claims includes breast, cervical, colorectal and prostate cancer screenings; bone mineral density screenings; optometry visits; glaucoma therapies; and lipid panel testing.

\*Covariate included in the treatment and censoring propensity score logistic regression models.

<sup>1</sup>Covariates in blue show a standardized difference greater than 0.1.

<sup>2</sup>For weighted data, aggregated standard deviations are calculated using the standard formula for unweighted data, and therefore represent an approximation.

<sup>3</sup>For weighted data, the standardized mean difference is calculated as the difference in weighted means or proportions divided by the pooled standard deviation across treatment groups. Note the pooled standard deviation is calculated using the standard formula for unweighted data, and therefore represents an approximation.

<sup>a</sup>Numbers do not correspond to all initiators since clones that experience events or are lost to follow-up before being assigned to a treatment strategy are included in both treatment strategies.

**Abbreviations:** SGLT-2i = sodium-glucose cotransporter-2 inhibitors; SITA = sitagliptin; RCC = renal cell carcinoma; Ref. = reference group; N/A = not applicable.

**Table 5. Effect Estimates for Initiators of All Sodium-Glucose Cotransporter-2 (SGLT-2) Inhibitors vs Sitagliptin: Broad Renal Cell Carcinoma (RCC) in the Sentinel Distributed Database (SDD) from March 1, 2013 to March 31, 2025, by Analysis Type**

<sup>a</sup>Numbers do not correspond to all initiators since clones that experience events or are lost to follow-up before being assigned to a treatment strategy are included in both treatment strategies.

**Abbreviations:** SGLT-2i = sodium-glucose cotransporter-2 inhibitors; SITA = sitagliptin; RCC = renal cell carcinoma; Ref. = reference group; N/A = not applicable.

<sup>a</sup>Numbers do not correspond to all initiators since clones that experience events or are lost to follow-up before being assigned to a treatment strategy are included in both treatment strategies.

\* Post-index GLP1-RA initiation is defined as any new use, as pre-index use is an exclusion criterion. Post-index insulin initiation is defined as first use in 365 days.

**Abbreviations:** CANA = canagliflozin; SITA = sitagliptin; GLP-1RA = glucagon-like peptide-1 receptor agonist; RCC = renal cell carcinoma; Ref. = reference group; N/A = not applicable.

*SGLT-2 = sodium-glucose cotransporter-2*

**Figure 7a. Aggregated Unweighted Kaplan-Meier Risk Estimates and 95% Confidence Intervals of Narrow Renal Cell Carcinoma (RCC) Among Canagliflozin vs Sitagliptin Initiators with  $\geq 180$  Days of Exposure (Trimmed Population), Censoring at Non-RCC Malignancy, in the Sentinel Distributed Database (SDD) from March 1, 2013 to March 31, 2025**

**Figure 7b. Aggregated Inverse-Probability-of-Treatment and -Censoring Weighted Kaplan-Meier Risk Estimates and 95% Confidence Intervals of Narrow Renal Cell Carcinoma (RCC) Among Canagliflozin vs Sitagliptin Initiators with  $\geq 180$  Days of Exposure, Censoring at Non-RCC Malignancy, in the Sentinel Distributed Database (SDD) from March 1, 2013 to March 31, 2025**

**Figure 8a. Aggregated Unweighted Kaplan-Meier Risk Estimates and 95% Confidence Intervals of Narrow Renal Cell Carcinoma (RCC) Among Canagliflozin vs Sitagliptin Initiators with  $\geq 180$  Days of Exposure (Trimmed Population), Censoring at Glucagon-Like Peptide-1 Receptor Agonist (GLP-1RA) or Insulin Initiation, in the Sentinel Distributed Database (SDD) from March 1, 2013 to March 31, 2025**

GLP-1RA = glucagon-like peptide-1 receptor agonists

**Figure 8b. Aggregated Inverse-Probability-of-Treatment and -Censoring Weighted Kaplan-Meier Risk Estimates and 95% Confidence Intervals of Narrow Renal Cell Carcinoma (RCC) Among Canagliflozin vs Sitagliptin Initiators with  $\geq 180$  Days of Exposure, Censoring at Glucagon-Like Peptide-1 Receptor Agonist (GLP-1RA) or Insulin Initiation, in the Sentinel Distributed Database (SDD) from March 1, 2013 to March 31, 2025**

GLP-1RA = glucagon-like peptide-1 receptor agonists

**Appendix A. Dates of Available Data for Each Data Partner (DP) as of Request Distribution Date (November 6, 2025)**

| DP ID | DP Start Date | DP End Date <sup>1</sup> |
|-------|---------------|--------------------------|
| DP01  | 01/01/2007    | 02/28/2025               |
| DP02  | 01/01/2006    | 01/31/2025               |
| DP03  | 01/01/2008    | 12/31/2024               |
| DP04  | 01/01/2014    | 12/31/2021               |
| DP05  | 01/01/2008    | 03/31/2025               |
| DP06  | 01/01/2010    | 12/31/2024               |

<sup>1</sup>End Date represents the earliest of: (1) query end date, or (2) last day of the most recent month for which all of a Data Partner's data tables (enrollment, dispensing, etc.) have at least 80% of the record count relative to the prior month.

**Appendix B. List of Generic and Brand Names of Medical Products Used to Define Exposures in this Request**

| Generic Name                                              | Brand Name                              |
|-----------------------------------------------------------|-----------------------------------------|
| <b>Canagliflozin</b>                                      |                                         |
| canagliflozin                                             | invokana                                |
| canagliflozin/metformin HCl                               | invokamet                               |
| canagliflozin/metformin HCl                               | invokamet XR                            |
| <b>Sitagliptin</b>                                        |                                         |
| sitagliptin                                               | januvia                                 |
| sitagliptin                                               | sitagliptin                             |
| sitagliptin                                               | zituvo                                  |
| sitagliptin and metformin hydrochloride                   | janumet                                 |
| sitagliptin and metformin hydrochloride                   | sitagliptin and metformin hydrochloride |
| sitagliptin and metformin hydrochloride                   | zitivimet                               |
| sitagliptin and metformin hydrochloride                   | zitivimet XR                            |
| sitagliptin hydrochloride oral                            | januvia                                 |
| sitagliptin phosphate                                     | januvia                                 |
| sitagliptin phosphate/metformin HCl                       | janumet                                 |
| sitagliptin phosphate/metformin HCl                       | janumet XR                              |
| sitagliptin phosphate/simvastatin                         | juvisync                                |
| <b>Sodium-Glucose Cotransporter-2 (SGLT-2) Inhibitors</b> |                                         |
| bexagliflozin                                             | bexagliflozin                           |

| <b>Code</b> | <b>Description</b>                                                                 | <b>Code Category</b> | <b>Code Type</b> |
|-------------|------------------------------------------------------------------------------------|----------------------|------------------|
| 198.3       | Secondary malignant neoplasm of brain and spinal cord                              | Diagnosis            | ICD-9-CM         |
| 198.4       | Secondary malignant neoplasm of other parts of nervous system                      | Diagnosis            | ICD-9-CM         |
| 198.5       | Secondary malignant neoplasm of bone and bone marrow                               | Diagnosis            | ICD-9-CM         |
| 198.6       | Secondary malignant neoplasm of ovary                                              | Diagnosis            | ICD-9-CM         |
| 198.7       | Secondary malignant neoplasm of adrenal gland                                      | Diagnosis            | ICD-9-CM         |
| 198.8       | Secondary malignant neoplasm of other specified sites                              | Diagnosis            | ICD-9-CM         |
| 198.81      | Secondary malignant neoplasm of breast                                             | Diagnosis            | ICD-9-CM         |
| 198.82      | Secondary malignant neoplasm of genital organs                                     | Diagnosis            | ICD-9-CM         |
| 198.89      | Secondary malignant neoplasm of other specified sites                              | Diagnosis            | ICD-9-CM         |
| 199.0       | Disseminated malignant neoplasm                                                    | Diagnosis            | ICD-9-CM         |
| 199.1       | Other malignant neoplasm of unspecified site                                       | Diagnosis            | ICD-9-CM         |
| C77.0       | Secondary and unspecified malignant neoplasm of lymph nodes of head, face and neck | Diagnosis            | ICD-9-CM         |
| C77.1       | Secondary and unspecified malignant neoplasm of intrathoracic lymph nodes          | Diagnosis            | ICD-10-CM        |
| C77.2       | Secondary and unspecified malignant neoplasm of intra-abdominal lymph nodes        | Diagnosis            | ICD-10-CM        |
| C77.3       | Secondary and unspecified malignant neoplasm of axilla and upper limb lymph nodes  | Diagnosis            | ICD-10-CM        |
| C77.4       | Secondary and unspecified malignant neoplasm of inguinal and lower limb lymph      | Diagnosis            | ICD-10-CM        |
| C77.5       | Secondary and unspecified malignant neoplasm of intrapelvic lymph nodes            | Diagnosis            | ICD-10-CM        |
| C77.8       | Secondary and unspecified malignant neoplasm of lymph nodes of multiple regions    | Diagnosis            | ICD-10-CM        |
| C77.9       | Secondary and unspecified malignant neoplasm of lymph node, unspecified            | Diagnosis            | ICD-10-CM        |
| C78.00      | Secondary malignant neoplasm of unspecified lung                                   | Diagnosis            | ICD-10-CM        |
| C78.01      | Secondary malignant neoplasm of right lung                                         | Diagnosis            | ICD-10-CM        |
| C78.02      | Secondary malignant neoplasm of left lung                                          | Diagnosis            | ICD-10-CM        |
| C78.1       | Secondary malignant neoplasm of mediastinum                                        | Diagnosis            | ICD-10-CM        |
| C78.2       | Secondary malignant neoplasm of pleura                                             | Diagnosis            | ICD-10-CM        |
| C78.30      | Secondary malignant neoplasm of unspecified respiratory organ                      | Diagnosis            | ICD-10-CM        |
| C78.39      | Secondary malignant neoplasm of other respiratory organs                           | Diagnosis            | ICD-10-CM        |
| C78.4       | Secondary malignant neoplasm of small intestine                                    | Diagnosis            | ICD-10-CM        |
| C78.5       | Secondary malignant neoplasm of large intestine and rectum                         | Diagnosis            | ICD-10-CM        |
| C78.6       | Secondary malignant neoplasm of retroperitoneum and peritoneum                     | Diagnosis            | ICD-10-CM        |
| C78.7       | Secondary malignant neoplasm of liver and intrahepatic bile duct                   | Diagnosis            | ICD-10-CM        |
| C78.80      | Secondary malignant neoplasm of unspecified digestive organ                        | Diagnosis            | ICD-10-CM        |
| C78.89      | Secondary malignant neoplasm of other digestive organs                             | Diagnosis            | ICD-10-CM        |
| C79.0       | Secondary malignant neoplasm of kidney and renal pelvis                            | Diagnosis            | ICD-10-CM        |
| C79.00      | Secondary malignant neoplasm of unspecified kidney and renal pelvis                | Diagnosis            | ICD-10-CM        |
| C79.01      | Secondary malignant neoplasm of right kidney and renal pelvis                      | Diagnosis            | ICD-10-CM        |
| C79.02      | Secondary malignant neoplasm of left kidney and renal pelvis                       | Diagnosis            | ICD-10-CM        |
| C79.10      | Secondary malignant neoplasm of unspecified urinary organs                         | Diagnosis            | ICD-10-CM        |
| C79.11      | Secondary malignant neoplasm of bladder                                            | Diagnosis            | ICD-10-CM        |
| C79.19      | Secondary malignant neoplasm of other urinary organs                               | Diagnosis            | ICD-10-CM        |
| C79.2       | Secondary malignant neoplasm of skin                                               | Diagnosis            | ICD-10-CM        |
| C79.31      | Secondary malignant neoplasm of brain                                              | Diagnosis            | ICD-10-CM        |
| C79.32      | Secondary malignant neoplasm of cerebral meninges                                  | Diagnosis            | ICD-10-CM        |

| <b>Code</b> | <b>Description</b>                                                                                                                                                                                 | <b>Code Category</b> | <b>Code Type</b> |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| 70553       | Magnetic resonance (eg, proton) imaging, brain (including brain stem); without contrast material, followed by contrast material(s) and further sequences                                           | Procedure            | CPT-4            |
| 71045       | Radiologic examination, chest; single view                                                                                                                                                         | Procedure            | CPT-4            |
| 71046       | Radiologic examination, chest; 2 views                                                                                                                                                             | Procedure            | CPT-4            |
| 71047       | Radiologic examination, chest; 3 views                                                                                                                                                             | Procedure            | CPT-4            |
| 71048       | Radiologic examination, chest; 4 or more views                                                                                                                                                     | Procedure            | CPT-4            |
| 71250       | Computed tomography, thorax, diagnostic; without contrast material                                                                                                                                 | Procedure            | CPT-4            |
| 71260       | Computed tomography, thorax, diagnostic; with contrast material(s)                                                                                                                                 | Procedure            | CPT-4            |
| 71270       | Computed tomography, thorax, diagnostic; without contrast material, followed by contrast material(s) and further sections                                                                          | Procedure            | CPT-4            |
| 71275       | Computed tomographic angiography, chest (noncoronary), with contrast material(s), including noncontrast images, if performed, and image postprocessing                                             | Procedure            | CPT-4            |
| 71550       | Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s)                                                         | Procedure            | CPT-4            |
| 71552       | Magnetic resonance (eg, proton) imaging, chest (eg, for evaluation of hilar and mediastinal lymphadenopathy); without contrast material(s), followed by contrast material(s) and further sequences | Procedure            | CPT-4            |
| 71555       | Magnetic resonance angiography, chest (excluding myocardium), with or without contrast material(s)                                                                                                 | Procedure            | CPT-4            |
| 72192       | Computed tomography, pelvis; without contrast material                                                                                                                                             | Procedure            | CPT-4            |
| 72193       | Computed tomography, pelvis; with contrast material(s)                                                                                                                                             | Procedure            | CPT-4            |
| 72194       | Computed tomography, pelvis; without contrast material, followed by contrast material(s) and further sections                                                                                      | Procedure            | CPT-4            |
| 72195       | Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s)                                                                                                                      | Procedure            | CPT-4            |
| 72197       | Magnetic resonance (eg, proton) imaging, pelvis; without contrast material(s), followed by contrast material(s) and further sequences                                                              | Procedure            | CPT-4            |
| 74150       | Computed tomography, abdomen; without contrast material                                                                                                                                            | Procedure            | CPT-4            |
| 74160       | Computed tomography, abdomen; with contrast material(s)                                                                                                                                            | Procedure            | CPT-4            |
| 74170       | Computed tomography, abdomen; without contrast material, followed by contrast material(s) and further sections                                                                                     | Procedure            | CPT-4            |
| 74176       | Computed tomography, abdomen and pelvis; without contrast material                                                                                                                                 | Procedure            | CPT-4            |
| 74177       | Computed tomography, abdomen and pelvis; with contrast material(s)                                                                                                                                 | Procedure            | CPT-4            |
| 74178       | Computed tomography, abdomen and pelvis; without contrast material in one or both body regions, followed by contrast material(s) and further sections in one or both body regions                  | Procedure            | CPT-4            |
| 74181       | Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s)                                                                                                                     | Procedure            | CPT-4            |
| 74183       | Magnetic resonance (eg, proton) imaging, abdomen; without contrast material(s), followed by with contrast material(s) and further sequences                                                        | Procedure            | CPT-4            |
| 78300       | Bone and/or joint imaging; limited area                                                                                                                                                            | Procedure            | CPT-4            |
| 78305       | Bone and/or joint imaging; multiple areas                                                                                                                                                          | Procedure            | CPT-4            |
| 78306       | Bone and/or joint imaging; whole body                                                                                                                                                              | Procedure            | CPT-4            |
| 78315       | Bone and/or joint imaging; 3 phase study                                                                                                                                                           | Procedure            | CPT-4            |

**Appendix C. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), International Classification of Diseases, Ninth Revision, Procedure Coding System (ICD-9-PCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Outcomes in this Request**

| <b>Code</b>                                     | <b>Description</b>                                                                                                                                                                                                            | <b>Code Category</b> | <b>Code Type</b> |
|-------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| 78320                                           | Bone and/or joint imaging; tomographic (SPECT)                                                                                                                                                                                | Procedure            | CPT-4            |
| 81001                                           | Urinalysis, by dip stick or tablet reagent for bilirubin, glucose, hemoglobin, ketones, leukocytes, nitrite, pH, protein, specific gravity, urobilinogen, any number of these constituents; automated, with microscopy        | Procedure            | CPT-4            |
| 81002                                           | Urinalysis, by dip stick or tablet reagent for bilirubin, glucose, hemoglobin, ketones, leukocytes, nitrite, pH, protein, specific gravity, urobilinogen, any number of these constituents; non-automated, without microscopy | Procedure            | CPT-4            |
| 81003                                           | Urinalysis, by dip stick or tablet reagent for bilirubin, glucose, hemoglobin, ketones, leukocytes, nitrite, pH, protein, specific gravity, urobilinogen, any number of these constituents; automated, without microscopy     | Procedure            | CPT-4            |
| 85004                                           | Blood count; automated differential WBC count                                                                                                                                                                                 | Procedure            | CPT-4            |
| 85007                                           | Blood count; blood smear, microscopic examination with manual differential WBC count                                                                                                                                          | Procedure            | CPT-4            |
| 85008                                           | Blood count; blood smear, microscopic examination without manual differential WBC count                                                                                                                                       | Procedure            | CPT-4            |
| 85009                                           | Blood count; manual differential WBC count, buffy coat                                                                                                                                                                        | Procedure            | CPT-4            |
| 85013                                           | Blood count; spun microhematocrit                                                                                                                                                                                             | Procedure            | CPT-4            |
| 85014                                           | Blood count; hematocrit (Hct)                                                                                                                                                                                                 | Procedure            | CPT-4            |
| 85018                                           | Blood count; hemoglobin (Hgb)                                                                                                                                                                                                 | Procedure            | CPT-4            |
| 85032                                           | Blood count; manual cell count (erythrocyte, leukocyte, or platelet) each                                                                                                                                                     | Procedure            | CPT-4            |
| 85041                                           | Blood count; red blood cell (RBC), automated                                                                                                                                                                                  | Procedure            | CPT-4            |
| 85048                                           | Blood count; leukocyte (WBC), automated                                                                                                                                                                                       | Procedure            | CPT-4            |
| 85049                                           | Blood count; platelet, automated                                                                                                                                                                                              | Procedure            | CPT-4            |
| 88341                                           | Immunohistochemistry or immunocytochemistry, per specimen; each additional single antibody stain procedure (List separately in addition to code for primary procedure)                                                        | Procedure            | CPT-4            |
| 88342                                           | Immunohistochemistry or immunocytochemistry, per specimen; initial single antibody stain procedure                                                                                                                            | Procedure            | CPT-4            |
| R93.41                                          | Abnormal radiologic findings on diagnostic imaging of renal pelvis, ureter, or bladder                                                                                                                                        | Diagnosis            | ICD-10-CM        |
| R93.421                                         | Abnormal radiologic findings on diagnostic imaging of right kidney                                                                                                                                                            | Diagnosis            | ICD-10-CM        |
| R93.422                                         | Abnormal radiologic findings on diagnostic imaging of left kidney                                                                                                                                                             | Diagnosis            | ICD-10-CM        |
| R93.429                                         | Abnormal radiologic findings on diagnostic imaging of unspecified kidney                                                                                                                                                      | Diagnosis            | ICD-10-CM        |
| R93.49                                          | Abnormal radiologic findings on diagnostic imaging of other urinary organs                                                                                                                                                    | Diagnosis            | ICD-10-CM        |
| 76700                                           | Ultrasound, abdominal, real time with image documentation; complete                                                                                                                                                           | Procedure            | CPT-4            |
| 76705                                           | Ultrasound, abdominal, real time with image documentation; limited (eg, single organ, quadrant, follow-up)                                                                                                                    | Procedure            | CPT-4            |
| <b>Metastatic Renal Cell Carcinoma Symptoms</b> |                                                                                                                                                                                                                               |                      |                  |
| 196.9                                           | Secondary and unspecified malignant neoplasm of lymph nodes, site unspecified                                                                                                                                                 | Diagnosis            | ICD-9-CM         |
| 197.0                                           | Secondary malignant neoplasm of lung                                                                                                                                                                                          | Diagnosis            | ICD-9-CM         |
| 197.7                                           | Secondary malignant neoplasm of liver                                                                                                                                                                                         | Diagnosis            | ICD-9-CM         |

| D7Y6FZZ | Plaque Radiation of Abdomen Lymphatics                                                                                                                              | Procedure     | ICD-10-PCS |
| 4165F   | 3-dimensional conformal radiotherapy (3D-CRT) or intensity modulated radiation therapy (IMRT) received (PRCA)                                                       | Procedure     | CPT-2      |
| 0082T   | Stereotactic body radiation therapy, treatment delivery, one or more treatment areas, per day                                                                       | Procedure     | CPT-3      |
| 0083T   | Stereotactic body radiation therapy, treatment management, per day                                                                                                  | Procedure     | CPT-3      |
| 77373   | Stereotactic body radiation therapy, treatment delivery, per fraction to 1 or more lesions, including image guidance, entire course not to exceed 5 fractions       | Procedure     | CPT-4      |
| 77401   | Radiation treatment delivery, superficial and/or ortho voltage, per day                                                                                             | Procedure     | CPT-4      |
| 77402   | Radiation treatment delivery, => 1 MeV; simple                                                                                                                      | Procedure     | CPT-4      |
| 77403   | Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; 6-10 MeV                                    | Procedure     | CPT-4      |
| 77404   | Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; 11-19 MeV                                   | Procedure     | CPT-4      |
| 77406   | Radiation treatment delivery, single treatment area, single port or parallel opposed ports, simple blocks or no blocks; 20 MeV or greater                           | Procedure     | CPT-4      |
| 77407   | Radiation treatment delivery, => 1 MeV; intermediate                                                                                                                | Procedure     | CPT-4      |
| 77408   | Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; 6-10 MeV                              | Procedure     | CPT-4      |
| 77409   | Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; 11-19 MeV                             | Procedure     | CPT-4      |
| 77411   | Radiation treatment delivery, 2 separate treatment areas, 3 or more ports on a single treatment area, use of multiple blocks; 20 MeV or greater                     | Procedure     | CPT-4      |
| 77412   | Radiation treatment delivery, => 1 MeV; complex                                                                                                                     | Procedure     | CPT-4      |
| 77413   | Radiation treatment delivery, 3 or more separate treatment areas, custom blocking, tangential ports, wedges, rotational beam, compensators, electron beam; 6-10 MeV | Procedure     | CPT-4      |

|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|-----------|
| <b>Chemotherapy</b> |                                                                                                                                                                                                       |               |           |
| 36489               | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); percutaneous, over age 2               | Procedure     | CPT-4     |
| 36491               | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); cutdown, over age 2                    | Procedure     | CPT-4     |
| 96400               | Chemotherapy administration, subcutaneous or intramuscular, with or without local anesthesia                                                                                                          | Procedure     | CPT-4     |
| 96401               | Chemotherapy administration, subcutaneous or intramuscular; non-hormonal anti-neoplastic                                                                                                              | Procedure     | CPT-4     |
| 96402               | Chemotherapy administration, subcutaneous or intramuscular; hormonal anti-neoplastic                                                                                                                  | Procedure     | CPT-4     |
| 96405               | Chemotherapy administration; intralesional, up to and including 7 lesions                                                                                                                             | Procedure     | CPT-4     |
| 96406               | Chemotherapy administration; intralesional, more than 7 lesions                                                                                                                                       | Procedure     | CPT-4     |
| 96408               | Chemotherapy administration, intravenous; push technique                                                                                                                                              | Procedure     | CPT-4     |
| 96409               | Chemotherapy administration; intravenous, push technique, single or initial substance/drug                                                                                                            | Procedure     | CPT-4     |
| 96410               | Chemotherapy administration, intravenous; infusion technique, up to one hour                                                                                                                          | Procedure     | CPT-4     |
| 96411               | Chemotherapy administration; intravenous, push technique, each additional substance/drug (List separately in addition to code for primary procedure)                                                  | Procedure     | CPT-4     |
| 96412               | Chemotherapy administration, intravenous; infusion technique, one to 8 hours, each additional hour (List separately in addition to code for primary procedure)                                        | Procedure     | CPT-4     |
| 96413               | Chemotherapy administration, intravenous infusion technique; up to 1 hour, single or initial substance/drug                                                                                           | Procedure     | CPT-4     |
| 96414               | Chemotherapy administration, intravenous; infusion technique, initiation of prolonged infusion (more than 8 hours), requiring the use of a portable or implantable pump                               | Procedure     | CPT-4     |
| 96415               | Chemotherapy administration, intravenous infusion technique; each additional hour (List separately in addition to code for primary procedure)                                                         | Procedure     | CPT-4     |
| 96416               | Chemotherapy administration, intravenous infusion technique; initiation of prolonged chemotherapy infusion (more than 8 hours), requiring use of a portable or implantable pump                       | Procedure     | CPT-4     |
| 96417               | Chemotherapy administration, intravenous infusion technique; each additional sequential infusion (different substance/drug), up to 1 hour (List separately in addition to code for primary procedure) | Procedure     | CPT-4     |
| 96420               | Chemotherapy administration, intra-arterial; push technique                                                                                                                                           | Procedure     | CPT-4     |
| 96422               | Chemotherapy administration, intra-arterial; infusion technique, up to 1 hour                                                                                                                         | Procedure     | CPT-4     |
| 96423               | Chemotherapy administration, intra-arterial; infusion technique, each additional hour (List separately in addition to code for primary procedure)                                                     | Procedure     | CPT-4     |
| 96425               | Chemotherapy administration, intra-arterial; infusion technique, initiation of prolonged infusion (more than 8 hours), requiring the use of a portable or implantable                                 | Procedure     | CPT-4     |
| 96440               | Chemotherapy administration into pleural cavity, requiring and including thoracentesis                                                                                                                | Procedure     | CPT-4     |

| 96549       | Unlisted chemotherapy procedure                                                                                                                                                                                                                                     | Procedure            | CPT-4            |
| C8953       | Chemotherapy administration, intravenous; push technique                                                                                                                                                                                                            | Procedure            | HCPCS            |
| C8954       | Chemotherapy administration, intravenous; infusion technique, up to one hour                                                                                                                                                                                        | Procedure            | HCPCS            |
| C8955       | Chemotherapy administration, intravenous; infusion technique, each additional hour (List separately in addition to C8954)                                                                                                                                           | Procedure            | HCPCS            |
| G0355       | Chemotherapy administration, subcutaneous or intramuscular nonhormonal antineoplastic                                                                                                                                                                               | Procedure            | HCPCS            |
| G0359       | Chemotherapy administration, intravenous infusion technique; up to one hour, single or initial substance/drug                                                                                                                                                       | Procedure            | HCPCS            |
| G0360       | Each additional hour, one to eight hours (list separately in addition to code for primary procedure) use G0360 in conjunction with G0359                                                                                                                            | Procedure            | HCPCS            |
| G0361       | Initiation of prolonged chemotherapy infusion (more than eight hours), requiring use of a portable or implantable pump                                                                                                                                              | Procedure            | HCPCS            |
| G0362       | Each additional sequential infusion (different substance/drug), up to one hour (use with G0359)                                                                                                                                                                     | Procedure            | HCPCS            |
| G0363       | Irrigation of implanted venous access device for drug delivery systems (do not report G0363 if an injection or infusion is provided on the same day)                                                                                                                | Procedure            | HCPCS            |
| J8999       | Prescription drug, oral, chemotherapeutic, NOS                                                                                                                                                                                                                      | Procedure            | HCPCS            |
| Q0083       | Chemotherapy administration by other than infusion technique only (e.g., subcutaneous, intramuscular, push), per visit                                                                                                                                              | Procedure            | HCPCS            |
| Q0084       | Chemotherapy administration by infusion technique only, per visit                                                                                                                                                                                                   | Procedure            | HCPCS            |
| Q0085       | Chemotherapy administration by both infusion technique and other technique(s) (e.g., subcutaneous, intramuscular, push), per visit                                                                                                                                  | Procedure            | HCPCS            |
| S9329       | Home infusion therapy, chemotherapy infusion; administrative services, professional pharmacy services, care coordination, and all necessary supplies and equipment (drugs and nursing visits coded separately), per diem (do not use this code with S9330 or S9331) | Procedure            | HCPCS            |
| S9330       | Home infusion therapy, continuous (24 hours or more) chemotherapy infusion; administrative services, professional pharmacy services, care coordination, and all necessary supplies and equipment (drugs and nursing visits coded separately), per                   | Procedure            | HCPCS            |
| S9331       | Home infusion therapy, intermittent (less than 24 hours) chemotherapy infusion; administrative services, professional pharmacy services, care coordination, and all necessary supplies and equipment (drugs and nursing visits coded separately), per               | Procedure            | HCPCS            |
| 0519F       | Planned chemotherapy regimen, including at a minimum: drug(s) prescribed, dose, and duration, documented prior to initiation of a new treatment regimen (ONC)                                                                                                       | Procedure            | CPT-2            |
| 3317F       | Pathology report confirming malignancy documented in the medical record and reviewed prior to the initiation of chemotherapy (ONC)                                                                                                                                  | Procedure            | CPT-2            |

**Appendix C. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), International Classification of Diseases, Ninth Revision, Procedure Coding System (ICD-9-PCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Outcomes in this Request**

| Code  | Description                                                                                                                                                                                                                                                                                                                                                                                          | Code Category | Code Type |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|-----------|
| 36260 | Insertion of implantable intra-arterial infusion pump (eg, for chemotherapy of liver)                                                                                                                                                                                                                                                                                                                | Procedure     | CPT-4     |
| 36640 | Arterial catheterization for prolonged infusion therapy (chemotherapy), cutdown                                                                                                                                                                                                                                                                                                                      | Procedure     | CPT-4     |
| 36823 | Insertion of arterial and venous cannula(s) for isolated extracorporeal circulation including regional chemotherapy perfusion to an extremity, with or without hyperthermia, with removal of cannula(s) and repair of arteriotomy and venotomy                                                                                                                                                       | Procedure     | CPT-4     |
| 96446 | Chemotherapy administration into the peritoneal cavity via implanted port or catheter                                                                                                                                                                                                                                                                                                                | Procedure     | CPT-4     |
| 96500 | Chemotherapy Injection, Intravenous, Single Premixed Agent,                                                                                                                                                                                                                                                                                                                                          | Procedure     | CPT-4     |
| 96501 | Chemotherapy Injection, Intravenous, Single Premixed Agent,                                                                                                                                                                                                                                                                                                                                          | Procedure     | CPT-4     |
| 96504 | Chemotherapy Injection, Intravenous, Multiple Premixed Agents,                                                                                                                                                                                                                                                                                                                                       | Procedure     | CPT-4     |
| 96505 | Chemotherapy Injection, Intravenous, Multiple Premixed Agents,                                                                                                                                                                                                                                                                                                                                       | Procedure     | CPT-4     |
| 96508 | Chemotherapy Injection, Intravenous, Complex, Using One Or                                                                                                                                                                                                                                                                                                                                           | Procedure     | CPT-4     |
| 96509 | Chemotherapy Injection, Intravenous, Complex, Using One Or                                                                                                                                                                                                                                                                                                                                           | Procedure     | CPT-4     |
| 96510 | Chemotherapy Injection, Intravenous, Complex, Using One Or                                                                                                                                                                                                                                                                                                                                           | Procedure     | CPT-4     |
| 96511 | Chemotherapy Injection, Intravenous, Complex, Using One Or                                                                                                                                                                                                                                                                                                                                           | Procedure     | CPT-4     |
| 96512 | Chemotherapy Injection, Intravenous, Complex, Using One Or                                                                                                                                                                                                                                                                                                                                           | Procedure     | CPT-4     |
| 96524 | Chemotherapy Injection, Complex, Administered By Physician,                                                                                                                                                                                                                                                                                                                                          | Procedure     | CPT-4     |

| Q0175 | Perphenazine, 4 mg, oral, FDA-approved prescription antiemetic, for use as a complete therapeutic substitute for an IV antiemetic at the time of chemotherapy treatment, not to exceed a 48-hour dosage regimen          | Procedure     | HCPCS     |
| Q0176 | Perphenazine, 8 mg, oral, FDA approved prescription antiemetic, for use as a complete therapeutic substitute for an IV antiemetic at the time of chemotherapy treatment, not to exceed a 48 hour dosage regimen          | Procedure     | HCPCS     |
| Q0177 | Hydroxyzine pamoate, 25 mg, oral, FDA-approved prescription antiemetic, for use as a complete therapeutic substitute for an IV antiemetic at the time of chemotherapy treatment, not to exceed a 48-hour dosage regimen  | Procedure     | HCPCS     |
| Q0178 | Hydroxyzine pamoate, 50 mg, oral, FDA approved prescription antiemetic, for use as a complete therapeutic substitute for an IV antiemetic at the time of chemotherapy treatment, not to exceed a 48-hour dosage regimen  | Procedure     | HCPCS     |
| Q0179 | Ondansetron HCl 8 mg, oral, FDA approved prescription antiemetic, for use as a complete therapeutic substitute for an IV antiemetic at the time of chemotherapy treatment, not to exceed a 48-hour dosage regimen        | Procedure     | HCPCS     |
| Q0180 | Dolasetron mesylate, 100 mg, oral, FDA-approved prescription antiemetic, for use as a complete therapeutic substitute for an IV antiemetic at the time of chemotherapy treatment, not to exceed a 24-hour dosage regimen | Procedure     | HCPCS     |
| Q0181 | Unspecified oral dosage form, FDA-approved prescription antiemetic, for use as a complete therapeutic substitute for an IV antiemetic at the time of chemotherapy treatment, not to exceed a 48-hour dosage regimen      | Procedure     | HCPCS     |
| S5019 | Chemotherapy administration supplies (with pump), per diem                                                                                                                                                               | Procedure     | HCPCS     |
| S5020 | Chemotherapy administration supplies (without pump), per diem                                                                                                                                                            | Procedure     | HCPCS     |
| S9425 | Nursing services and all necessary supplies and additives for home iv chemotherapy (via iv push, gravity drip, stationary pump, ambulatory belt pump), per diem (hydration solution and drugs not included)              | Procedure     | HCPCS     |
| C9027 | Injection, pembrolizumab, 1 mg                                                                                                                                                                                           | Procedure     | HCPCS     |
| J9271 | Injection, pembrolizumab, 1 mg                                                                                                                                                                                           | Procedure     | HCPCS     |
| C9453 | Injection, nivolumab, 1 mg                                                                                                                                                                                               | Procedure     | HCPCS     |
| J9298 | Injection, nivolumab and relatlimab-rmbw, 3 mg/1 mg                                                                                                                                                                      | Procedure     | HCPCS     |
| J9299 | Injection, nivolumab, 1 mg                                                                                                                                                                                               | Procedure     | HCPCS     |
| J9228 | Injection, ipilimumab, 1 mg                                                                                                                                                                                              | Procedure     | HCPCS     |
| J9330 | Injection, temsirolimus, 1 mg                                                                                                                                                                                            | Procedure     | HCPCS     |
| C9142 | Injection, bevacizumab-maly, biosimilar, (Alymsys), 10 mg                                                                                                                                                                | Procedure     | HCPCS     |
| C9257 | Injection, bevacizumab, 0.25 mg                                                                                                                                                                                          | Procedure     | HCPCS     |
| J9035 | Injection, bevacizumab, 10 mg                                                                                                                                                                                            | Procedure     | HCPCS     |
| Q5107 | Injection, bevacizumab-awwb, biosimilar, (Mvasi), 10 mg                                                                                                                                                                  | Procedure     | HCPCS     |
| Q5118 | Injection, bevacizumab-bvzr, biosimilar, (Zirabev), 10 mg                                                                                                                                                                | Procedure     | HCPCS     |
| Q5126 | Injection, bevacizumab-maly, biosimilar, (Alymsys), 10 mg                                                                                                                                                                | Procedure     | HCPCS     |
| Q5129 | Injection, bevacizumab-adcd (Vegzelma), biosimilar, 10 mg                                                                                                                                                                | Procedure     | HCPCS     |
| 80169 | Everolimus                                                                                                                                                                                                               | Procedure     | CPT-4     |
| J7527 | Everolimus, oral, 0.25 mg                                                                                                                                                                                                | Procedure     | HCPCS     |

**Appendix C. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), International Classification of Diseases, Ninth Revision, Procedure Coding System (ICD-9-PCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Outcomes in this Request**

| Code  | Description                                                  | Code      |           |
|-------|--------------------------------------------------------------|-----------|-----------|
|       |                                                              | Category  | Code Type |
| J8561 | Everolimus, oral, 0.25 mg                                    | Procedure | HCPCS     |
| J9214 | Injection, interferon, alfa-2b, recombinant, 1 million units | Procedure | HCPCS     |
| S0148 | Injection, PEGylated interferon alfa-2B, 10 mcg              | Procedure | HCPCS     |

**Note:** National Drug Codes (NDCs) for products in Appendix D are also searched for in the Procedure table as part of the outcome algorithms.

**Appendix D. List of Generic and Brand Names of Medical Products for Renal Cell Carcinoma Chemotherapies Used in the Outcome Identification Algorithm in this Request**

| Generic Name                             | Brand Name                  |
|------------------------------------------|-----------------------------|
| Renal Cell Carcinoma - Narrow Definition |                             |
| aldesleukin                              | proleukin                   |
| avelumab                                 | bavencio                    |
| axitinib                                 | inlyta                      |
| bevacizumab                              | avastin                     |
| bevacizumab-adcd                         | vegzelma                    |
| bevacizumab-awwb                         | mvasi                       |
| bevacizumab-bvzr                         | zirabev                     |
| bevacizumab-maly                         | alymsys                     |
| cabozantinib s-malate                    | cabometyx                   |
| cabozantinib s-malate                    | cometriq                    |
| everolimus                               | afinitor                    |
| everolimus                               | afinitor disperz            |
| everolimus                               | everolimus (antineoplastic) |
| everolimus                               | torpenz                     |
| interferon alfa-2b,recomb.               | Intron A                    |
| ipilimumab                               | yervoy                      |
| lenvatinib mesylate                      | lenvima                     |
| nivolumab                                | opdivo                      |
| nivolumab-hyaluronidase-nvhy             | opdivo qvantig              |
| nivolumab-relatlimab-rmbw                | opdualag                    |
| pazopanib HCl                            | pazopanib                   |
| pazopanib HCl                            | votrient                    |
| peginterferon alfa-2b                    | sylatron                    |
| peginterferon alfa-2b                    | sylatron 4-Pack             |
| pembrolizumab                            | keytruda                    |
| ropeginterferon alfa-2b-njft             | besremi                     |
| sorafenib tosylate                       | nexavar                     |
| sorafenib tosylate                       | sorafenib                   |
| sunitinib malate                         | sunitinib malate            |
| sunitinib malate                         | sutent                      |
| temsirolimus                             | temsirolimus                |
| temsirolimus                             | torisel                     |

**Appendix E. List of Generic and Brand Names of Medical Products Used to Define Inclusion and Exclusion Criteria in this Request**

| <b>Generic Name</b>                                                                      | <b>Brand Name</b>                      |
|------------------------------------------------------------------------------------------|----------------------------------------|
| <b>Alogliptin</b>                                                                        |                                        |
| alogliptin                                                                               | alogliptin and metformin hydrochloride |
| alogliptin                                                                               | alogliptin and pioglitazone            |
| alogliptin                                                                               | kazano                                 |
| alogliptin                                                                               | oseni                                  |
| alogliptin and metformin hydrochloride                                                   | nesina                                 |
| alogliptin and metformin hydrochloride                                                   | oseni                                  |
| alogliptin and pioglitazone                                                              | alogliptin and metformin hydrochloride |
| alogliptin and pioglitazone                                                              | alogliptin and pioglitazone            |
| alogliptin and pioglitazone                                                              | kazano                                 |

| <b>Code</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>Code Category</b> | <b>Code Type</b> |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| 36147       | Introduction of needle and/or catheter, arteriovenous shunt created for dialysis (graft/fistula); initial access with complete radiological evaluation of dialysis access, including fluoroscopy, image documentation and report (includes access of shunt, injection[s] of contrast, and all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava)                         | Procedure            | CPT-4            |
| 36148       | Introduction of needle and/or catheter, arteriovenous shunt created for dialysis (graft/fistula); additional access for therapeutic intervention (List separately in addition to code for primary procedure)                                                                                                                                                                                                                                                          | Procedure            | CPT-4            |
| 36488       | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); percutaneous, age 2 years or under                                                                                                                                                                                                                                                                     | Procedure            | CPT-4            |
| 36489       | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); percutaneous, over age 2                                                                                                                                                                                                                                                                               | Procedure            | CPT-4            |
| 36490       | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); cutdown, age 2 years or under                                                                                                                                                                                                                                                                          | Procedure            | CPT-4            |
| 36491       | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); cutdown, over age 2                                                                                                                                                                                                                                                                                    | Procedure            | CPT-4            |
| 36800       | Insertion of cannula for hemodialysis, other purpose (separate procedure); vein to vein                                                                                                                                                                                                                                                                                                                                                                               | Procedure            | CPT-4            |
| 36810       | Insertion of cannula for hemodialysis, other purpose (separate procedure); arteriovenous, external (Scribner type)                                                                                                                                                                                                                                                                                                                                                    | Procedure            | CPT-4            |
| 36815       | Insertion of cannula for hemodialysis, other purpose (separate procedure); arteriovenous, external revision, or closure                                                                                                                                                                                                                                                                                                                                               | Procedure            | CPT-4            |
| 36818       | Arteriovenous anastomosis, open; by upper arm cephalic vein transposition                                                                                                                                                                                                                                                                                                                                                                                             | Procedure            | CPT-4            |
| 36819       | Arteriovenous anastomosis, open; by upper arm basilic vein transposition                                                                                                                                                                                                                                                                                                                                                                                              | Procedure            | CPT-4            |
| 36820       | Arteriovenous anastomosis, open; by forearm vein transposition                                                                                                                                                                                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 36821       | Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)                                                                                                                                                                                                                                                                                                                                                                              | Procedure            | CPT-4            |
| 36838       | Distal revascularization and interval ligation (DRIL), upper extremity hemodialysis access (steal syndrome)                                                                                                                                                                                                                                                                                                                                                           | Procedure            | CPT-4            |
| 36901       | Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; | Procedure            | CPT-4            |

| <b>Code</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>Code Category</b> | <b>Code Type</b> |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| 36902       | Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary | Procedure            | CPT-4            |
| 36903       | Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interp  | Procedure            | CPT-4            |
| 36904       | Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s);                                                                                                                                                                                                                                                                                             | Procedure            | CPT-4            |
| 36905       | Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty                                                                                                              | Procedure            | CPT-4            |
| 36906       | Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis circuit                                    | Procedure            | CPT-4            |
| 36907       | Transluminal balloon angioplasty, central dialysis segment, performed through dialysis circuit, including all imaging and radiological supervision and interpretation required to perform the angioplasty (List separately in addition to code for primary procedure)                                                                                                                                                                                                                                                                                                                                                     | Procedure            | CPT-4            |
| 36908       | Transcatheter placement of intravascular stent(s), central dialysis segment, performed through dialysis circuit, including all imaging and radiological supervision and interpretation required to perform the stenting, and all angioplasty in the central dialysis segment (List separately in addition to code for primary procedure)                                                                                                                                                                                                                                                                                  | Procedure            | CPT-4            |
| 36909       | Dialysis circuit permanent vascular embolization or occlusion (including main circuit or any accessory veins), endovascular, including all imaging and radiological supervision and interpretation necessary to complete the intervention (List separately in addition to code for primary procedure)                                                                                                                                                                                                                                                                                                                     | Procedure            | CPT-4            |

**Appendix F. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Inclusion and Exclusion Criteria in this Request**

| <b>Code</b> | <b>Description</b>                                                                                                                                                                                                                                                                                    | <b>Code Category</b> | <b>Code Type</b> |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| 38.95       | Venous catheterization for renal dialysis                                                                                                                                                                                                                                                             | Procedure            | ICD-9-CM         |
| 39.27       | Arteriovenostomy for renal dialysis                                                                                                                                                                                                                                                                   | Procedure            | ICD-9-CM         |
| 39.42       | Revision of arteriovenous shunt for renal dialysis                                                                                                                                                                                                                                                    | Procedure            | ICD-9-CM         |
| 39.43       | Removal of arteriovenous shunt for renal dialysis                                                                                                                                                                                                                                                     | Procedure            | ICD-9-CM         |
| 39.95       | Hemodialysis                                                                                                                                                                                                                                                                                          | Procedure            | ICD-9-CM         |
| 3E1M39Z     | Irrigation of Peritoneal Cavity using Dialysate, Percutaneous Approach                                                                                                                                                                                                                                | Procedure            | ICD-10-PCS       |
| 4052F       | Hemodialysis via functioning arteriovenous (AV) fistula (ESRD)                                                                                                                                                                                                                                        | Procedure            | CPT-2            |
| 4053F       | Hemodialysis via functioning arteriovenous (AV) graft (ESRD)                                                                                                                                                                                                                                          | Procedure            | CPT-2            |
| 4054F       | Hemodialysis via catheter (ESRD)                                                                                                                                                                                                                                                                      | Procedure            | CPT-2            |
| 4055F       | Patient receiving peritoneal dialysis (ESRD)                                                                                                                                                                                                                                                          | Procedure            | CPT-2            |
| 49324       | Laparoscopy, surgical; with insertion of tunneled intraperitoneal catheter                                                                                                                                                                                                                            | Procedure            | CPT-4            |
| 49325       | Laparoscopy, surgical; with revision of previously placed intraperitoneal cannula or catheter, with removal of intraluminal obstructive material if performed                                                                                                                                         | Procedure            | CPT-4            |
| 49418       | Insertion of tunneled intraperitoneal catheter (eg, dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous | Procedure            | CPT-4            |
| 49419       | Insertion of tunneled intraperitoneal catheter, with subcutaneous port (ie, totally implantable)                                                                                                                                                                                                      | Procedure            | CPT-4            |
| 49420       | Insertion of intraperitoneal cannula or catheter for drainage or dialysis; temporary                                                                                                                                                                                                                  | Procedure            | CPT-4            |
| 49421       | Insertion of tunneled intraperitoneal catheter for dialysis, open                                                                                                                                                                                                                                     | Procedure            | CPT-4            |
| 49422       | Removal of tunneled intraperitoneal catheter                                                                                                                                                                                                                                                          | Procedure            | CPT-4            |
| 49435       | Insertion of subcutaneous extension to intraperitoneal cannula or catheter with remote chest exit site (List separately in addition to code for primary procedure)                                                                                                                                    | Procedure            | CPT-4            |
| 54.98       | Peritoneal dialysis                                                                                                                                                                                                                                                                                   | Procedure            | ICD-9-CM         |
| 5A1D70Z     | Performance of Urinary Filtration, Intermittent, Less than 6 Hours Per Day                                                                                                                                                                                                                            | Procedure            | ICD-10-PCS       |
| 5A1D80Z     | Performance of Urinary Filtration, Prolonged Intermittent, 6-18 hours Per Day                                                                                                                                                                                                                         | Procedure            | ICD-10-PCS       |
| 5A1D90Z     | Performance of Urinary Filtration, Continuous, Greater than 18 hours Per Day                                                                                                                                                                                                                          | Procedure            | ICD-10-PCS       |
| 90935       | Hemodialysis procedure with single evaluation by a physician or other qualified health care professional                                                                                                                                                                                              | Procedure            | CPT-4            |
| 90937       | Hemodialysis procedure requiring repeated evaluation(s) with or without substantial revision of dialysis prescription                                                                                                                                                                                 | Procedure            | CPT-4            |
| 90939       | Hemodialysis access flow study to determine blood flow in grafts and arteriovenous fistulae by an indicator dilution method, hook-up; transcutaneous measurement and disconnection                                                                                                                    | Procedure            | CPT-4            |
| 90940       | Hemodialysis access flow study to determine blood flow in grafts and arteriovenous fistulae by an indicator method                                                                                                                                                                                    | Procedure            | CPT-4            |
| 90941       | Hemodialysis, For Acute Renal Failure And Or Intoxication,                                                                                                                                                                                                                                            | Procedure            | CPT-4            |
| 90942       | Hemodialysis, For Acute Renal Failure And Or Intoxication,                                                                                                                                                                                                                                            | Procedure            | CPT-4            |
| 90943       | Hemodialysis, For Acute Renal Failure And Or Intoxication,                                                                                                                                                                                                                                            | Procedure            | CPT-4            |
| 90944       | Hemodialysis, For Acute Renal Failure And Or Intoxication,                                                                                                                                                                                                                                            | Procedure            | CPT-4            |

|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| 90945       | Dialysis procedure other than hemodialysis (eg, peritoneal dialysis, hemofiltration, or other continuous renal replacement therapies), with single evaluation by a physician or other qualified health care professional                                                                       | Procedure            | CPT-4            |
| 90947       | Dialysis procedure other than hemodialysis (eg, peritoneal dialysis, hemofiltration, or other continuous renal replacement therapies) requiring repeated evaluations by a physician or other qualified health care professional, with or without substantial revision of dialysis prescription | Procedure            | CPT-4            |
| 90963       | End-stage renal disease (ESRD) related services for home dialysis per full month, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents                                                | Procedure            | CPT-4            |
| 90964       | End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents                                                          | Procedure            | CPT-4            |
| 90965       | End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents                                                         | Procedure            | CPT-4            |
| 90966       | End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 20 years of age and older                                                                                                                                                                       | Procedure            | CPT-4            |
| 90967       | End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients younger than 2 years of age                                                                                                                                              | Procedure            | CPT-4            |
| 90968       | End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 2-11 years of age                                                                                                                                                        | Procedure            | CPT-4            |
| 90969       | End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 12-19 years of age                                                                                                                                                       | Procedure            | CPT-4            |
| 90970       | End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older                                                                                                                                                | Procedure            | CPT-4            |
| 90976       | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 90977       | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 90978       | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 90979       | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 90982       | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 90983       | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 90984       | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 90985       | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure            | CPT-4            |
| 90988       | Supervision Of Hemodialysis In Hospital Or Other Facility (excluding Home Dialysis), On Monthly Basis                                                                                                                                                                                          | Procedure            | CPT-4            |
| 90989       | Dialysis training, patient, including helper where applicable, any mode, completed course                                                                                                                                                                                                      | Procedure            | CPT-4            |
| 90990       | Hemodialysis Training And/or Counseling                                                                                                                                                                                                                                                        | Procedure            | CPT-4            |

| 93985       | Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete bilateral study  | Procedure            | CPT-4            |
| 93986       | Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete unilateral study | Procedure            | CPT-4            |
| 93990       | Duplex scan of hemodialysis access (including arterial inflow, body of access and venous outflow)                                                        | Procedure            | CPT-4            |
| 99512       | Home visit for hemodialysis                                                                                                                              | Procedure            | CPT-4            |
| 99559       | Home infusion of peritoneal dialysis, per visit                                                                                                          | Procedure            | CPT-4            |
| A4653       | Peritoneal dialysis catheter anchoring device, belt, each                                                                                                | Procedure            | HCPCS            |
| A4655       | Needles and syringes for dialysis                                                                                                                        | Procedure            | HCPCS            |
| A4671       | Disposable cyclor set used with cyclor dialysis machine, each                                                                                            | Procedure            | HCPCS            |
| A4672       | Drainage extension line, sterile, for dialysis, each                                                                                                     | Procedure            | HCPCS            |
| A4673       | Extension line with easy lock connectors, used with dialysis                                                                                             | Procedure            | HCPCS            |
| A4674       | Chemicals/antiseptics solution used to clean/sterilize dialysis equipment, per 8 oz                                                                      | Procedure            | HCPCS            |
| A4680       | Activated carbon filter for hemodialysis, each                                                                                                           | Procedure            | HCPCS            |
| A4690       | Dialyzer (artificial kidneys), all types, all sizes, for hemodialysis, each                                                                              | Procedure            | HCPCS            |
| A4706       | Bicarbonate concentrate, solution, for hemodialysis, per gallon                                                                                          | Procedure            | HCPCS            |
| A4707       | Bicarbonate concentrate, powder, for hemodialysis, per packet                                                                                            | Procedure            | HCPCS            |
| A4708       | Acetate concentrate solution, for hemodialysis, per gallon                                                                                               | Procedure            | HCPCS            |
| A4709       | Acid concentrate, solution, for hemodialysis, per gallon                                                                                                 | Procedure            | HCPCS            |
| A4714       | Treated water (deionized, distilled, or reverse osmosis) for peritoneal dialysis, per gallon                                                             | Procedure            | HCPCS            |
| A4719       | "Y set" tubing for peritoneal dialysis                                                                                                                   | Procedure            | HCPCS            |
| A4720       | Dialysate solution, any concentration of dextrose, fluid volume greater than 249 cc, but less than or equal to 999 cc, for peritoneal dialysis           | Procedure            | HCPCS            |
| A4721       | Dialysate solution, any concentration of dextrose, fluid volume greater than 999 cc but less than or equal to 1999 cc, for peritoneal dialysis           | Procedure            | HCPCS            |
| A4722       | Dialysate solution, any concentration of dextrose, fluid volume greater than 1999 cc but less than or equal to 2999 cc, for peritoneal dialysis          | Procedure            | HCPCS            |
| A4723       | Dialysate solution, any concentration of dextrose, fluid volume greater than 2999 cc but less than or equal to 3999 cc, for peritoneal dialysis          | Procedure            | HCPCS            |
| A4724       | Dialysate solution, any concentration of dextrose, fluid volume greater than 3999 cc but less than or equal to 4999 cc, for peritoneal dialysis          | Procedure            | HCPCS            |
| A4725       | Dialysate solution, any concentration of dextrose, fluid volume greater than 4999 cc but less than or equal to 5999 cc, for peritoneal dialysis          | Procedure            | HCPCS            |
| A4726       | Dialysate solution, any concentration of dextrose, fluid volume greater than 5999 cc, for peritoneal dialysis                                            | Procedure            | HCPCS            |

| A4728       | Dialysate solution, nondextrose containing, 500 ml                                                                          | Procedure            | HCPCS            |
| A4730       | Fistula cannulation set for hemodialysis, each                                                                              | Procedure            | HCPCS            |
| A4735       | Local/topical anesthetics for dialysis only                                                                                 | Procedure            | HCPCS            |
| A4736       | Topical anesthetic, for dialysis, per g                                                                                     | Procedure            | HCPCS            |
| A4737       | Injectable anesthetic, for dialysis, per 10 ml                                                                              | Procedure            | HCPCS            |
| A4740       | Shunt accessory, for hemodialysis, any type, each                                                                           | Procedure            | HCPCS            |
| A4750       | Blood tubing, arterial or venous, for hemodialysis, each                                                                    | Procedure            | HCPCS            |
| A4755       | Blood tubing, arterial and venous combined, for hemodialysis, each                                                          | Procedure            | HCPCS            |
| A4760       | Dialysate solution test kit, for peritoneal dialysis, any type, each                                                        | Procedure            | HCPCS            |
| A4765       | Dialysate concentrate, powder, additive for peritoneal dialysis, per packet                                                 | Procedure            | HCPCS            |
| A4766       | Dialysate concentrate, solution, additive for peritoneal dialysis, per 10 ml                                                | Procedure            | HCPCS            |
| A4770       | Blood collection tube, vacuum, for dialysis, per 50                                                                         | Procedure            | HCPCS            |
| A4771       | Serum clotting time tube, for dialysis, per 50                                                                              | Procedure            | HCPCS            |
| A4772       | Blood glucose test strips, for dialysis, per 50                                                                             | Procedure            | HCPCS            |
| A4773       | Occult blood test strips, for dialysis, per 50                                                                              | Procedure            | HCPCS            |
| A4774       | Ammonia test strips, for dialysis, per 50                                                                                   | Procedure            | HCPCS            |
| A4780       | Sterilizing agent for dialysis equipment, per gallon                                                                        | Procedure            | HCPCS            |
| A4790       | Cleansing agents for equipment for dialysis only                                                                            | Procedure            | HCPCS            |
| A4800       | Heparin for dialysis and antidote, any strength, porcine or beef, up to 1000 units, 10-30 ml (for parenteral use see b4216) | Procedure            | HCPCS            |
| A4801       | Heparin, any type, for hemodialysis, per 1000 units                                                                         | Procedure            | HCPCS            |
| A4802       | Protamine sulfate, for hemodialysis, per 50 mg                                                                              | Procedure            | HCPCS            |
| A4820       | Hemodialysis kit supplies                                                                                                   | Procedure            | HCPCS            |
| A4850       | Hemostats with rubber tips for dialysis                                                                                     | Procedure            | HCPCS            |
| A4860       | Disposable catheter tips for peritoneal dialysis, per 10                                                                    | Procedure            | HCPCS            |
| A4870       | Plumbing and/or electrical work for home hemodialysis equipment                                                             | Procedure            | HCPCS            |
| A4880       | Storage tanks utilized in connection with water purification system, replacement tanks for dialysis                         | Procedure            | HCPCS            |
| A4890       | Contracts, repair and maintenance, for hemodialysis equipment                                                               | Procedure            | HCPCS            |
| A4900       | Continuous ambulatory peritoneal dialysis (capd) supply kit                                                                 | Procedure            | HCPCS            |
| A4901       | Continuous cycling peritoneal dialysis (ccpd) supply kit                                                                    | Procedure            | HCPCS            |
| A4905       | Intermittent peritoneal dialysis (ipd) supply kit                                                                           | Procedure            | HCPCS            |
| A4910       | Non-medical supplies for dialysis, (i.e., scale, scissors, stopwatch, etc.)                                                 | Procedure            | HCPCS            |
| A4911       | Drain bag/bottle, for dialysis, each                                                                                        | Procedure            | HCPCS            |
| A4913       | Miscellaneous dialysis supplies, not otherwise specified                                                                    | Procedure            | HCPCS            |
| A4918       | Venous pressure clamp, for hemodialysis, each                                                                               | Procedure            | HCPCS            |
| A4929       | Tourniquet for dialysis, each                                                                                               | Procedure            | HCPCS            |
| B50W        | Plain Radiography / Dialysis Shunt/Fistula                                                                                  | Procedure            | ICD-10-PCS       |
| B50W0ZZ     | Plain Radiography of Dialysis Shunt/Fistula using High Osmolar Contrast                                                     | Procedure            | ICD-10-PCS       |
| B50W1ZZ     | Plain Radiography of Dialysis Shunt/Fistula using Low Osmolar Contrast                                                      | Procedure            | ICD-10-PCS       |
| B50WYZZ     | Plain Radiography of Dialysis Shunt/Fistula using Other Contrast                                                            | Procedure            | ICD-10-PCS       |
| B51W        | Fluoroscopy / Dialysis Shunt/Fistula                                                                                        | Procedure            | ICD-10-PCS       |

**Appendix F. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Inclusion and Exclusion Criteria in this Request**

| Code    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Code      |            |

| C1037   | Catheter, vaxcel chronic dialysis catheter, medcomp bio flex tesio catheter, medcomp silicone tesio catheter, medcomp hemo-cath long term silicone catheter, bard niagara dual lumen catheter, bard opti-flow dual lumen catheter, medcomp ash split catheter                                                                                                                                                                                                                                                                                                                                                           | Procedure | HCPCS      |
| C1152   | Access system, dialysis, lifesite access system                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Procedure | HCPCS      |
| C1750   | Catheter, hemodialysis/peritoneal, long-term                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Procedure | HCPCS      |
| C1751   | Catheter, infusion, inserted peripherally, centrally or midline (other than hemodialysis)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Procedure | HCPCS      |
| C1752   | Catheter, hemodialysis/peritoneal, short-term                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Procedure | HCPCS      |
| C1881   | Dialysis access system (implantable)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Procedure | HCPCS      |
| C7513   | Dialysis circuit, introduction of needle(s) and/or catheter(s), with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, with transluminal balloon angioplasty of central dialysis segment, performed through dialysis circuit, including all required imaging, radiological supervision and interpretation, image documentation and report                | Procedure | HCPCS      |
| C7514   | Dialysis circuit, introduction of needle(s) and/or catheter(s), with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, with all angioplasty in the central dialysis segment, and transcatheter placement of intravascular stent(s), central dialysis segment, performed through dialysis circuit, including all required imaging, radiological supervisi | Procedure | HCPCS      |
| C7515   | Dialysis circuit, introduction of needle(s) and/or catheter(s), with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, with dialysis circuit permanent endovascular embolization or occlusion of main circuit or any accessory veins, including all required imaging, radiological supervision and interpretation, image documentation and report        | Procedure | HCPCS      |

**Appendix F. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Inclusion and Exclusion Criteria in this Request**

| <b>Code</b> | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                | <b>Code Category</b> | <b>Code Type</b> |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| G0365       | Vessel mapping of vessels for hemodialysis access (services for preoperative vessel mapping prior to creation of hemodialysis access using an autogenous hemodialysis conduit, including arterial inflow and venous outflow)                                                                                                                                                                                      | Procedure            | HCPCS            |
| G0392       | Transluminal balloon angioplasty, percutaneous; for maintenance of hemodialysis access, arteriovenous fistula or graft; arterial                                                                                                                                                                                                                                                                                  | Procedure            | HCPCS            |
| G0393       | Transluminal balloon angioplasty, percutaneous; for maintenance of hemodialysis access, arteriovenous fistula or graft; venous                                                                                                                                                                                                                                                                                    | Procedure            | HCPCS            |
| G0491       | Dialysis procedure at a Medicare certified ESRD facility for acute kidney injury without ESRD                                                                                                                                                                                                                                                                                                                     | Procedure            | HCPCS            |
| G0492       | Dialysis procedure with single evaluation by a physician or other qualified health care professional for acute kidney injury without ESRD                                                                                                                                                                                                                                                                         | Procedure            | HCPCS            |
| G1026       | The number of adult patient-months in the denominator who were on maintenance hemodialysis using a catheter continuously for 3 months or longer under the care of the same practitioner or group partner as of the last hemodialysis session of the reporting month                                                                                                                                               | Procedure            | HCPCS            |
| G1027       | The number of adult patient-months in the denominator who were on maintenance hemodialysis under the care of the same practitioner or group partner as of the last hemodialysis session of the reporting month using a catheter continuously for less than 3 months                                                                                                                                               | Procedure            | HCPCS            |
| G8075       | ESRD patient with documented dialysis dose of URR greater than or equal to 65% (or Kt/V greater than or equal to 1.2)                                                                                                                                                                                                                                                                                             | Procedure            | HCPCS            |
| G8076       | ESRD patient with documented dialysis dose of URR less than 65% (or Kt/V less than 1.2)                                                                                                                                                                                                                                                                                                                           | Procedure            | HCPCS            |
| G8081       | ESRD patient requiring hemodialysis vascular access documented to have received autogenous AV fistula                                                                                                                                                                                                                                                                                                             | Procedure            | HCPCS            |
| G8082       | ESRD patient requiring hemodialysis documented to have received vascular access other than autogenous AV fistula                                                                                                                                                                                                                                                                                                  | Procedure            | HCPCS            |
| G8085       | ESRD patient requiring hemodialysis vascular access was not an eligible candidate for autogenous AV fistula                                                                                                                                                                                                                                                                                                       | Procedure            | HCPCS            |
| G8575       | Developed postoperative renal failure or required dialysis                                                                                                                                                                                                                                                                                                                                                        | Procedure            | HCPCS            |
| G8576       | No postoperative renal failure/dialysis not required                                                                                                                                                                                                                                                                                                                                                              | Procedure            | HCPCS            |
| G8714       | Hemodialysis treatment performed exactly 3 times per week > 90 days                                                                                                                                                                                                                                                                                                                                               | Procedure            | HCPCS            |
| G8715       | Hemodialysis treatment performed less than 3 times per week or greater than 3 times per week                                                                                                                                                                                                                                                                                                                      | Procedure            | HCPCS            |
| G8727       | Patient receiving hemodialysis, peritoneal dialysis or kidney transplantation                                                                                                                                                                                                                                                                                                                                     | Procedure            | HCPCS            |
| G8956       | Patient receiving maintenance hemodialysis in an outpatient dialysis facility                                                                                                                                                                                                                                                                                                                                     | Procedure            | HCPCS            |
| G8957       | Patient not receiving maintenance hemodialysis in an outpatient dialysis facility                                                                                                                                                                                                                                                                                                                                 | Procedure            | HCPCS            |
| G9239       | Documentation of reasons for patient initiating maintenance hemodialysis with a catheter as the mode of vascular access (e.g., patient has a maturing arteriovenous fistula (AVF)/arteriovenous graft (AVG), time limited trial of hemodialysis, other medical reasons, patient declined AVF/AVG, other patient reasons, patient followed by reporting nephrologist for fewer than 90 days, other system reasons) | Procedure            | HCPCS            |

|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| G9240       | Patient whose mode of vascular access is a catheter at the time maintenance hemodialysis is initiated                                                                                                                                                                | Procedure            | HCPCS            |
| G9241       | Patient whose mode of vascular access is not a catheter at the time maintenance hemodialysis is initiated                                                                                                                                                            | Procedure            | HCPCS            |
| G9264       | Documentation of patient receiving maintenance hemodialysis for greater than or equal to 90 days with a catheter for documented reasons (e.g., other medical reasons, patient declined arteriovenous fistula (AVF)/arteriovenous graft (AVG), other patient reasons) | Procedure            | HCPCS            |
| G9265       | Patient receiving maintenance hemodialysis for greater than or equal to 90 days with a catheter as the mode of vascular access                                                                                                                                       | Procedure            | HCPCS            |
| G9266       | Patient receiving maintenance hemodialysis for greater than or equal to 90 days without a catheter as the mode of vascular access                                                                                                                                    | Procedure            | HCPCS            |
| G9523       | Patient discontinued from hemodialysis or peritoneal dialysis                                                                                                                                                                                                        | Procedure            | HCPCS            |
| G9747       | Patient is undergoing palliative dialysis with a catheter                                                                                                                                                                                                            | Procedure            | HCPCS            |
| G9749       | Patient is undergoing palliative dialysis with a catheter                                                                                                                                                                                                            | Procedure            | HCPCS            |
| J0604       | Cinacalcet, oral, 1 mg, (for ESRD on dialysis)                                                                                                                                                                                                                       | Procedure            | HCPCS            |
| J0879       | Injection, difelikefalin, 0.1 mcg, (for ESRD on dialysis)                                                                                                                                                                                                            | Procedure            | HCPCS            |
| J0882       | Injection, darbepoetin alfa, 1 mcg (for ESRD on dialysis)                                                                                                                                                                                                            | Procedure            | HCPCS            |
| J0884       | Injection, argatroban, 1 mg (for ESRD on dialysis)                                                                                                                                                                                                                   | Procedure            | HCPCS            |
| J0886       | Injection, epoetin alfa, 1000 units (for ESRD on dialysis)                                                                                                                                                                                                           | Procedure            | HCPCS            |
| J0887       | Injection, epoetin beta, 1 mcg, (for ESRD on dialysis)                                                                                                                                                                                                               | Procedure            | HCPCS            |
| J0889       | Daprodustat, oral, 1 mg, (for ESRD on dialysis)                                                                                                                                                                                                                      | Procedure            | HCPCS            |
| J0890       | Injection, peginesatide, 0.1 mg (for ESRD on dialysis)                                                                                                                                                                                                               | Procedure            | HCPCS            |
| J0892       | Injection, argatroban (Accord), not therapeutically equivalent to J0884, 1 mg (for ESRD on dialysis)                                                                                                                                                                 | Procedure            | HCPCS            |
| J0899       | Injection, argatroban (AuroMedics), not therapeutically equivalent to J0884, 1 mg (for ESRD on dialysis)                                                                                                                                                             | Procedure            | HCPCS            |
| J3591       | Unclassified drug or biological used for ESRD on dialysis                                                                                                                                                                                                            | Procedure            | HCPCS            |
| K0610       | Peritoneal dialysis clamp, each                                                                                                                                                                                                                                      | Procedure            | HCPCS            |
| K0611       | Disposable cyclor set used with cyclor dialysis machine, each                                                                                                                                                                                                        | Procedure            | HCPCS            |
| K0612       | Drainage extension line, sterile, for dialysis, each                                                                                                                                                                                                                 | Procedure            | HCPCS            |
| K0613       | Extension line with easy lock connectors, used with dialysis                                                                                                                                                                                                         | Procedure            | HCPCS            |
| K0614       | Chemicals/antiseptic solution used to clean/sterilize dialysis equipment, per 8 oz                                                                                                                                                                                   | Procedure            | HCPCS            |
| M1262       | Patients who had a transplant prior to initiation of dialysis                                                                                                                                                                                                        | Procedure            | HCPCS            |
| M1263       | Patients in hospice on their initiation of dialysis date or during the month of evaluation                                                                                                                                                                           | Procedure            | HCPCS            |
| M1264       | Patients age 75 or older on their initiation of dialysis date                                                                                                                                                                                                        | Procedure            | HCPCS            |
| M1269       | Receiving ESRD MCP dialysis services by the provider on the last day of the reporting month                                                                                                                                                                          | Procedure            | HCPCS            |
| M1273       | Patients who were admitted to a skilled nursing facility (SNF) within 1 year of dialysis initiation according to the CMS-2728 Form                                                                                                                                   | Procedure            | HCPCS            |
| Q0139       | Injection, ferumoxytol, for treatment of iron deficiency anemia, 1 mg (for ESRD on dialysis)                                                                                                                                                                         | Procedure            | HCPCS            |
| Q2047       | Injection, peginesatide, 0.1 mg (for ESRD on dialysis)                                                                                                                                                                                                               | Procedure            | HCPCS            |

**Appendix F. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Inclusion and Exclusion Criteria in this Request**

| <b>Code</b> | <b>Description</b>                                                                                                                                                                                           | <b>Code Category</b> | <b>Code Type</b> |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------|
| Q3023       | Injection, hepatitis B vaccine, immunosuppressed patients (including renal dialysis patients), per dose                                                                                                      | Procedure            | HCPCS            |
| Q4054       | Injection, darbepoetin alfa, 1 mcg (for ESRD on dialysis)                                                                                                                                                    | Procedure            | HCPCS            |
| Q4055       | Injection, epoetin alfa, 1000 units (for ESRD on dialysis)                                                                                                                                                   | Procedure            | HCPCS            |
| Q4081       | Injection, epoetin alfa, 100 units (for ESRD on dialysis)                                                                                                                                                    | Procedure            | HCPCS            |
| Q5105       | Injection, epoetin alfa-epbx, biosimilar, (Retacrit) (for ESRD on dialysis), 100 units                                                                                                                       | Procedure            | HCPCS            |
| Q9972       | Injection, epoetin beta, 1 microgram, (for ESRD on dialysis)                                                                                                                                                 | Procedure            | HCPCS            |
| S0194       | Dialysis/stress vitamin supplement, oral, 100 capsules                                                                                                                                                       | Procedure            | HCPCS            |
| S9335       | Home therapy, hemodialysis; administrative services, professional pharmacy services, care coordination, and all necessary supplies and equipment (drugs and nursing services coded separately), per diem     | Procedure            | HCPCS            |
| S9339       | Home therapy; peritoneal dialysis, administrative services, professional pharmacy services, care coordination and all necessary supplies and equipment (drugs and nursing visits coded separately), per diem | Procedure            | HCPCS            |
| 458.21      | Hypotension of hemodialysis                                                                                                                                                                                  | Diagnosis            | ICD-9-CM         |
| 792.5       | Cloudy (hemodialysis) (peritoneal) dialysis effluent                                                                                                                                                         | Diagnosis            | ICD-9-CM         |
| 996.56      | Mechanical complications due to peritoneal dialysis catheter                                                                                                                                                 | Diagnosis            | ICD-9-CM         |
| 996.68      | Infection and inflammatory reaction due to peritoneal dialysis catheter                                                                                                                                      | Diagnosis            | ICD-9-CM         |
| 996.73      | Other complications due to renal dialysis device, implant, and graft                                                                                                                                         | Diagnosis            | ICD-9-CM         |
| E870.2      | Accidental cut, puncture, perforation, or hemorrhage during kidney dialysis or other perfusion                                                                                                               | Diagnosis            | ICD-9-CM         |
| E871.2      | Foreign object left in body during kidney dialysis or other perfusion                                                                                                                                        | Diagnosis            | ICD-9-CM         |
| E872.2      | Failure of sterile precautions during kidney dialysis and other perfusion                                                                                                                                    | Diagnosis            | ICD-9-CM         |
| E874.2      | Mechanical failure of instrument or apparatus during kidney dialysis and other perfusion                                                                                                                     | Diagnosis            | ICD-9-CM         |
| E879.1      | Kidney dialysis as the cause of abnormal reaction of patient, or of later complication, without mention of misadventure at time of procedure                                                                 | Diagnosis            | ICD-9-CM         |
| I95.3       | Hypotension of hemodialysis                                                                                                                                                                                  | Diagnosis            | ICD-10-CM        |
| R88.0       | Cloudy (hemodialysis) (peritoneal) dialysis effluent                                                                                                                                                         | Diagnosis            | ICD-10-CM        |
| T85.611A    | Breakdown (mechanical) of intraperitoneal dialysis catheter, initial encounter                                                                                                                               | Diagnosis            | ICD-10-CM        |
| T85.621A    | Displacement of intraperitoneal dialysis catheter, initial encounter                                                                                                                                         | Diagnosis            | ICD-10-CM        |
| T85.631A    | Leakage of intraperitoneal dialysis catheter, initial encounter                                                                                                                                              | Diagnosis            | ICD-10-CM        |
| T85.691A    | Other mechanical complication of intraperitoneal dialysis catheter, initial encounter                                                                                                                        | Diagnosis            | ICD-10-CM        |
| T85.71XA    | Infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter                                                                                                                   | Diagnosis            | ICD-10-CM        |
| V45.1       | Renal dialysis status                                                                                                                                                                                        | Diagnosis            | ICD-9-CM         |
| V45.11      | Renal dialysis status                                                                                                                                                                                        | Diagnosis            | ICD-9-CM         |
| V56         | Encounter for dialysis and dialysis catheter care                                                                                                                                                            | Diagnosis            | ICD-9-CM         |
| V56.0       | Encounter for extracorporeal dialysis                                                                                                                                                                        | Diagnosis            | ICD-9-CM         |
| V56.1       | Fitting and adjustment of extracorporeal dialysis catheter                                                                                                                                                   | Diagnosis            | ICD-9-CM         |
| V56.2       | Fitting and adjustment of peritoneal dialysis catheter                                                                                                                                                       | Diagnosis            | ICD-9-CM         |
| V56.3       | Encounter for adequacy testing for dialysis                                                                                                                                                                  | Diagnosis            | ICD-9-CM         |
| V56.31      | Encounter for adequacy testing for hemodialysis                                                                                                                                                              | Diagnosis            | ICD-9-CM         |
| V56.32      | Encounter for adequacy testing for peritoneal dialysis                                                                                                                                                       | Diagnosis            | ICD-9-CM         |

**Appendix G. List of Generic and Brand Names of Medical Products Used to Define Censoring Criteria in this Request**

| <b>Generic Name</b>                             | <b>Brand Name</b>                       |
|-------------------------------------------------|-----------------------------------------|
| insulin regular, human                          | novolin r flexpen                       |
| insulin regular, human                          | novolin r regular u100 insulin          |
| insulin regular, human in 0.9 % sodium chloride | myxredlin                               |
| <b>Linagliptin</b>                              |                                         |
| linagliptin                                     | tradjenta                               |
| linagliptin and metformin hydrochloride         | glyxambi                                |
| linagliptin and metformin hydrochloride         | jentadueto XR                           |
| linagliptin and metformin hydrochloride         | tradjenta                               |
| linagliptin/metformin HCl                       | jentadueto                              |
| linagliptin/metformin HCl                       | jentadueto XR                           |
| <b>Saxagliptin</b>                              |                                         |
| saxagliptin                                     | onglyza                                 |
| saxagliptin                                     | saxagliptin                             |
| saxagliptin HCl                                 | onglyza                                 |
| saxagliptin HCl                                 | saxagliptin                             |
| saxagliptin HCl/metformin HCl                   | kombiglyze XR                           |
| saxagliptin HCl/metformin HCl                   | saxagliptin-metformin                   |
| <b>Sitagliptin</b>                              |                                         |
| sitagliptin                                     | januvia                                 |
| sitagliptin                                     | sitagliptin                             |
| sitagliptin                                     | zituvo                                  |
| sitagliptin and metformin hydrochloride         | janumet                                 |
| sitagliptin and metformin hydrochloride         | sitagliptin and metformin hydrochloride |
| sitagliptin and metformin hydrochloride         | zituvo                                  |
| sitagliptin and metformin hydrochloride         | zituvo XR                               |
| sitagliptin hydrochloride oral                  | januvia                                 |
| sitagliptin phosphate                           | januvia                                 |
| sitagliptin phosphate/metformin HCl             | janumet                                 |
| sitagliptin phosphate/metformin HCl             | janumet XR                              |
| sitagliptin phosphate/simvastatin               | juvisync                                |
| <b>Sotagliflozin</b>                            |                                         |
| sotagliflozin                                   | inpefa                                  |

| Code     | Description                                                                                                                                              | Code      |            |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------|
|          |                                                                                                                                                          | Category  | Code Type  |
| E870.2   | Accidental cut, puncture, perforation, or hemorrhage during kidney dialysis or other perfusion                                                           | Diagnosis | ICD-9-CM   |
| E871.2   | Foreign object left in body during kidney dialysis or other perfusion                                                                                    | Diagnosis | ICD-9-CM   |
| E872.2   | Failure of sterile precautions during kidney dialysis and other perfusion                                                                                | Diagnosis | ICD-9-CM   |
| E874.2   | Mechanical failure of instrument or apparatus during kidney dialysis and other perfusion                                                                 | Diagnosis | ICD-9-CM   |
| E879.1   | Kidney dialysis as the cause of abnormal reaction of patient, or of later complication, without mention of misadventure at time of procedure             | Diagnosis | ICD-9-CM   |
| I95.3    | Hypotension of hemodialysis                                                                                                                              | Diagnosis | ICD-10-CM  |
| R88.0    | Cloudy (hemodialysis) (peritoneal) dialysis effluent                                                                                                     | Diagnosis | ICD-10-CM  |
| T85.611A | Breakdown (mechanical) of intraperitoneal dialysis catheter, initial encounter                                                                           | Diagnosis | ICD-10-CM  |
| T85.621A | Displacement of intraperitoneal dialysis catheter, initial encounter                                                                                     | Diagnosis | ICD-10-CM  |
| T85.631A | Leakage of intraperitoneal dialysis catheter, initial encounter                                                                                          | Diagnosis | ICD-10-CM  |
| T85.691A | Other mechanical complication of intraperitoneal dialysis catheter, initial encounter                                                                    | Diagnosis | ICD-10-CM  |
| T85.71XA | Infection and inflammatory reaction due to peritoneal dialysis catheter, initial encounter                                                               | Diagnosis | ICD-10-CM  |
| V45.1    | Renal dialysis status                                                                                                                                    | Diagnosis | ICD-9-CM   |
| V45.11   | Renal dialysis status                                                                                                                                    | Diagnosis | ICD-9-CM   |
| V56      | Encounter for dialysis and dialysis catheter care                                                                                                        | Diagnosis | ICD-9-CM   |
| V56.0    | Encounter for extracorporeal dialysis                                                                                                                    | Diagnosis | ICD-9-CM   |
| V56.1    | Fitting and adjustment of extracorporeal dialysis catheter                                                                                               | Diagnosis | ICD-9-CM   |
| V56.2    | Fitting and adjustment of peritoneal dialysis catheter                                                                                                   | Diagnosis | ICD-9-CM   |
| V56.3    | Encounter for adequacy testing for dialysis                                                                                                              | Diagnosis | ICD-9-CM   |
| V56.31   | Encounter for adequacy testing for hemodialysis                                                                                                          | Diagnosis | ICD-9-CM   |
| V56.32   | Encounter for adequacy testing for peritoneal dialysis                                                                                                   | Diagnosis | ICD-9-CM   |
| V56.8    | Encounter other dialysis                                                                                                                                 | Diagnosis | ICD-9-CM   |
| Y62.2    | Failure of sterile precautions during kidney dialysis and other perfusion                                                                                | Diagnosis | ICD-10-CM  |
| Y84.1    | Kidney dialysis as the cause of abnormal reaction of the patient, or of later complication, without mention of misadventure at the time of the procedure | Diagnosis | ICD-10-CM  |
| Z49.0    | Preparatory care for renal dialysis                                                                                                                      | Diagnosis | ICD-10-CM  |
| Z49.01   | Encounter for fitting and adjustment of extracorporeal dialysis catheter                                                                                 | Diagnosis | ICD-10-CM  |
| Z49.02   | Encounter for fitting and adjustment of peritoneal dialysis catheter                                                                                     | Diagnosis | ICD-10-CM  |
| Z49.3    | Encounter for adequacy testing for dialysis                                                                                                              | Diagnosis | ICD-10-CM  |
| Z49.31   | Encounter for adequacy testing for hemodialysis                                                                                                          | Diagnosis | ICD-10-CM  |
| Z49.32   | Encounter for adequacy testing for peritoneal dialysis                                                                                                   | Diagnosis | ICD-10-CM  |
| Z91.15   | Patient's noncompliance with renal dialysis                                                                                                              | Diagnosis | ICD-10-CM  |
| Z99.2    | Dependence on renal dialysis                                                                                                                             | Diagnosis | ICD-10-CM  |
| 031209D  | Bypass Innominate Artery to Upper Arm Vein with Autologous Venous Tissue, Open Approach                                                                  | Procedure | ICD-10-PCS |
| 031209F  | Bypass Innominate Artery to Lower Arm Vein with Autologous Venous Tissue, Open Approach                                                                  | Procedure | ICD-10-PCS |
| 03120AD  | Bypass Innominate Artery to Upper Arm Vein with Autologous Arterial Tissue, Open Approach                                                                | Procedure | ICD-10-PCS |

**Appendix H. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Censoring Criteria in this Request**

| Code    | Description                                                                                          | Code      |            |

| 35876 | Thrombectomy of arterial or venous graft (other than hemodialysis graft or fistula); with revision of arterial or venous graft                                                                                                                                                                                                                                                                                                                | Procedure | CPT-4     |
| 36145 | Introduction of needle or intracatheter; arteriovenous shunt created for dialysis (cannula, fistula, or graft)                                                                                                                                                                                                                                                                                                                                | Procedure | CPT-4     |
| 36147 | Introduction of needle and/or catheter, arteriovenous shunt created for dialysis (graft/fistula); initial access with complete radiological evaluation of dialysis access, including fluoroscopy, image documentation and report (includes access of shunt, injection[s] of contrast, and all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava) | Procedure | CPT-4     |
| 36148 | Introduction of needle and/or catheter, arteriovenous shunt created for dialysis (graft/fistula); additional access for therapeutic intervention (List separately in addition to code for primary procedure)                                                                                                                                                                                                                                  | Procedure | CPT-4     |
| 36488 | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); percutaneous, age 2 years or under                                                                                                                                                                                                                                             | Procedure | CPT-4     |
| 36489 | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); percutaneous, over age 2                                                                                                                                                                                                                                                       | Procedure | CPT-4     |
| 36490 | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); cutdown, age 2 years or under                                                                                                                                                                                                                                                  | Procedure | CPT-4     |
| 36491 | Placement of central venous catheter (subclavian, jugular, or other vein) (eg, for central venous pressure, hyperalimentation, hemodialysis, or chemotherapy); cutdown, over age 2                                                                                                                                                                                                                                                            | Procedure | CPT-4     |
| 36800 | Insertion of cannula for hemodialysis, other purpose (separate procedure); vein to vein                                                                                                                                                                                                                                                                                                                                                       | Procedure | CPT-4     |
| 36810 | Insertion of cannula for hemodialysis, other purpose (separate procedure); arteriovenous, external (Scribner type)                                                                                                                                                                                                                                                                                                                            | Procedure | CPT-4     |
| 36815 | Insertion of cannula for hemodialysis, other purpose (separate procedure); arteriovenous, external revision, or closure                                                                                                                                                                                                                                                                                                                       | Procedure | CPT-4     |
| 36818 | Arteriovenous anastomosis, open; by upper arm cephalic vein transposition                                                                                                                                                                                                                                                                                                                                                                     | Procedure | CPT-4     |
| 36819 | Arteriovenous anastomosis, open; by upper arm basilic vein transposition                                                                                                                                                                                                                                                                                                                                                                      | Procedure | CPT-4     |
| 36820 | Arteriovenous anastomosis, open; by forearm vein transposition                                                                                                                                                                                                                                                                                                                                                                                | Procedure | CPT-4     |
| 36821 | Arteriovenous anastomosis, open; direct, any site (eg, Cimino type) (separate procedure)                                                                                                                                                                                                                                                                                                                                                      | Procedure | CPT-4     |
| 36838 | Distal revascularization and interval ligation (DRIL), upper extremity hemodialysis access (steal syndrome)                                                                                                                                                                                                                                                                                                                                   | Procedure | CPT-4     |

| 36901 | Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report;                                                                                                                                                     | Procedure | CPT-4     |
| 36902 | Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary | Procedure | CPT-4     |
| 36903 | Introduction of needle(s) and/or catheter(s), dialysis circuit, with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, radiological supervision and interpretation and image documentation and report; with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interp  | Procedure | CPT-4     |
| 36904 | Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic                                                                                                                                                                                                                                                                                                           | Procedure | CPT-4     |
| 36905 | Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty                                                                                                              | Procedure | CPT-4     |
| 36906 | Percutaneous transluminal mechanical thrombectomy and/or infusion for thrombolysis, dialysis circuit, any method, including all imaging and radiological supervision and interpretation, diagnostic angiography, fluoroscopic guidance, catheter placement(s), and intraprocedural pharmacological thrombolytic injection(s); with transcatheter placement of intravascular stent(s), peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the stenting, and all angioplasty within the peripheral dialysis                                            | Procedure | CPT-4     |

**Appendix H. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Censoring Criteria in this Request**

| Code    | Description                                                                                                                                                                                                                                                                                                                              | Code      |            |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------|
|         |                                                                                                                                                                                                                                                                                                                                          | Category  | Code Type  |
| 36907   | Transluminal balloon angioplasty, central dialysis segment, performed through dialysis circuit, including all imaging and radiological supervision and interpretation required to perform the angioplasty (List separately in addition to code for primary procedure)                                                                    | Procedure | CPT-4      |
| 36908   | Transcatheter placement of intravascular stent(s), central dialysis segment, performed through dialysis circuit, including all imaging and radiological supervision and interpretation required to perform the stenting, and all angioplasty in the central dialysis segment (List separately in addition to code for primary procedure) | Procedure | CPT-4      |
| 36909   | Dialysis circuit permanent vascular embolization or occlusion (including main circuit or any accessory veins), endovascular, including all imaging and radiological supervision and interpretation necessary to complete the intervention (List separately in addition to code for primary procedure)                                    | Procedure | CPT-4      |
| 38.95   | Venous catheterization for renal dialysis                                                                                                                                                                                                                                                                                                | Procedure | ICD-9-CM   |
| 39.27   | Arteriovenostomy for renal dialysis                                                                                                                                                                                                                                                                                                      | Procedure | ICD-9-CM   |
| 39.42   | Revision of arteriovenous shunt for renal dialysis                                                                                                                                                                                                                                                                                       | Procedure | ICD-9-CM   |
| 39.43   | Removal of arteriovenous shunt for renal dialysis                                                                                                                                                                                                                                                                                        | Procedure | ICD-9-CM   |
| 39.95   | Hemodialysis                                                                                                                                                                                                                                                                                                                             | Procedure | ICD-9-CM   |
| 3E1M39Z | Irrigation of Peritoneal Cavity using Dialysate, Percutaneous Approach                                                                                                                                                                                                                                                                   | Procedure | ICD-10-PCS |
| 4052F   | Hemodialysis via functioning arteriovenous (AV) fistula (ESRD)                                                                                                                                                                                                                                                                           | Procedure | CPT-2      |
| 4053F   | Hemodialysis via functioning arteriovenous (AV) graft (ESRD)                                                                                                                                                                                                                                                                             | Procedure | CPT-2      |
| 4054F   | Hemodialysis via catheter (ESRD)                                                                                                                                                                                                                                                                                                         | Procedure | CPT-2      |
| 4055F   | Patient receiving peritoneal dialysis (ESRD)                                                                                                                                                                                                                                                                                             | Procedure | CPT-2      |
| 49324   | Laparoscopy, surgical; with insertion of tunneled intraperitoneal catheter                                                                                                                                                                                                                                                               | Procedure | CPT-4      |
| 49325   | Laparoscopy, surgical; with revision of previously placed intraperitoneal cannula or catheter, with removal of intraluminal obstructive material if performed                                                                                                                                                                            | Procedure | CPT-4      |
| 49418   | Insertion of tunneled intraperitoneal catheter (eg, dialysis, intraperitoneal chemotherapy instillation, management of ascites), complete procedure, including imaging guidance, catheter placement, contrast injection when performed, and radiological supervision and interpretation, percutaneous                                    | Procedure | CPT-4      |
| 49419   | Insertion of tunneled intraperitoneal catheter, with subcutaneous port (ie, totally implantable)                                                                                                                                                                                                                                         | Procedure | CPT-4      |
| 49420   | Insertion of intraperitoneal cannula or catheter for drainage or dialysis; temporary                                                                                                                                                                                                                                                     | Procedure | CPT-4      |
| 49421   | Insertion of tunneled intraperitoneal catheter for dialysis, open                                                                                                                                                                                                                                                                        | Procedure | CPT-4      |
| 49422   | Removal of tunneled intraperitoneal catheter                                                                                                                                                                                                                                                                                             | Procedure | CPT-4      |
| 49435   | Insertion of subcutaneous extension to intraperitoneal cannula or catheter with remote chest exit site (List separately in addition to code for primary procedure)                                                                                                                                                                       | Procedure | CPT-4      |
| 54.98   | Peritoneal dialysis                                                                                                                                                                                                                                                                                                                      | Procedure | ICD-9-CM   |
| 5A1D70Z | Performance of Urinary Filtration, Intermittent, Less than 6 Hours Per Day                                                                                                                                                                                                                                                               | Procedure | ICD-10-PCS |
| 5A1D80Z | Performance of Urinary Filtration, Prolonged Intermittent, 6-18 hours Per Day                                                                                                                                                                                                                                                            | Procedure | ICD-10-PCS |
| 5A1D90Z | Performance of Urinary Filtration, Continuous, Greater than 18 hours Per Day                                                                                                                                                                                                                                                             | Procedure | ICD-10-PCS |
| 90935   | Hemodialysis procedure with single evaluation by a physician or other qualified health care professional                                                                                                                                                                                                                                 | Procedure | CPT-4      |

**Appendix H. List of Current Procedural Terminology, Category II (CPT-2), Current Procedural Terminology, Category III (CPT-3), Current Procedural Terminology, Fourth Edition (CPT-4), Healthcare Common Procedure Coding System (HCPCS), and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) Procedure Codes and International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) and International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) Diagnosis Codes Used to Define Censoring Criteria in this Request**

| Code  | Description                                                                                                                                                                                                                                                                                    | Code      |           |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------|
|       |                                                                                                                                                                                                                                                                                                | Category  | Code Type |
| 90937 | Hemodialysis procedure requiring repeated evaluation(s) with or without substantial revision of dialysis prescription                                                                                                                                                                          | Procedure | CPT-4     |
| 90939 | Hemodialysis access flow study to determine blood flow in grafts and arteriovenous fistulae by an indicator dilution method, hook-up; transcutaneous measurement and disconnection                                                                                                             | Procedure | CPT-4     |
| 90940 | Hemodialysis access flow study to determine blood flow in grafts and arteriovenous fistulae by an indicator method                                                                                                                                                                             | Procedure | CPT-4     |
| 90941 | Hemodialysis, For Acute Renal Failure And Or Intoxication,                                                                                                                                                                                                                                     | Procedure | CPT-4     |
| 90942 | Hemodialysis, For Acute Renal Failure And Or Intoxication,                                                                                                                                                                                                                                     | Procedure | CPT-4     |
| 90943 | Hemodialysis, For Acute Renal Failure And Or Intoxication,                                                                                                                                                                                                                                     | Procedure | CPT-4     |
| 90944 | Hemodialysis, For Acute Renal Failure And Or Intoxication,                                                                                                                                                                                                                                     | Procedure | CPT-4     |
| 90945 | Dialysis procedure other than hemodialysis (eg, peritoneal dialysis, hemofiltration, or other continuous renal replacement therapies), with single evaluation by a physician or other qualified health care professional                                                                       | Procedure | CPT-4     |
| 90947 | Dialysis procedure other than hemodialysis (eg, peritoneal dialysis, hemofiltration, or other continuous renal replacement therapies) requiring repeated evaluations by a physician or other qualified health care professional, with or without substantial revision of dialysis prescription | Procedure | CPT-4     |
| 90963 | End-stage renal disease (ESRD) related services for home dialysis per full month, for patients younger than 2 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents                                                | Procedure | CPT-4     |
| 90964 | End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 2-11 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents                                                          | Procedure | CPT-4     |
| 90965 | End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 12-19 years of age to include monitoring for the adequacy of nutrition, assessment of growth and development, and counseling of parents                                                         | Procedure | CPT-4     |
| 90966 | End-stage renal disease (ESRD) related services for home dialysis per full month, for patients 20 years of age and older                                                                                                                                                                       | Procedure | CPT-4     |
| 90967 | End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients younger than 2 years of age                                                                                                                                              | Procedure | CPT-4     |
| 90968 | End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 2-11 years of age                                                                                                                                                        | Procedure | CPT-4     |
| 90969 | End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 12-19 years of age                                                                                                                                                       | Procedure | CPT-4     |
| 90970 | End-stage renal disease (ESRD) related services for dialysis less than a full month of service, per day; for patients 20 years of age and older                                                                                                                                                | Procedure | CPT-4     |
| 90976 | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure | CPT-4     |
| 90977 | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure | CPT-4     |
| 90978 | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure | CPT-4     |
| 90979 | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure | CPT-4     |
| 90982 | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure | CPT-4     |
| 90983 | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                                                                                                                                                        | Procedure | CPT-4     |

| 90984 | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                     | Procedure | CPT-4     |
| 90985 | Peritoneal Dialysis For End-stage Renal Disease (esrd),                                                                                                     | Procedure | CPT-4     |
| 90988 | Supervision Of Hemodialysis In Hospital Or Other Facility (excluding Home Dialysis),<br>On Monthly Basis                                                    | Procedure | CPT-4     |
| 90989 | Dialysis training, patient, including helper where applicable, any mode, completed<br>course                                                                | Procedure | CPT-4     |
| 90990 | Hemodialysis Training And/or Counseling                                                                                                                     | Procedure | CPT-4     |
| 90991 | Home Hemodialysis Care, Outpatient, For Those Services Either Provided By The<br>Physician Primarily Responsible                                            | Procedure | CPT-4     |
| 90992 | Peritoneal Dialysis Training And/or Counseling                                                                                                              | Procedure | CPT-4     |
| 90993 | Dialysis training, patient, including helper where applicable, any mode, course not<br>completed, per training session                                      | Procedure | CPT-4     |
| 90994 | Supervision Of Chronic Ambulatory Peritoneal Dialysis (capd), Home Or Out-patient<br>(monthly)                                                              | Procedure | CPT-4     |
| 90997 | Hemoperfusion (eg, with activated charcoal or resin)                                                                                                        | Procedure | CPT-4     |
| 90999 | Unlisted dialysis procedure, inpatient or outpatient                                                                                                        | Procedure | CPT-4     |
| 93985 | Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment<br>prior to creation of hemodialysis access; complete bilateral study  | Procedure | CPT-4     |
| 93986 | Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment<br>prior to creation of hemodialysis access; complete unilateral study | Procedure | CPT-4     |
| 93990 | Duplex scan of hemodialysis access (including arterial inflow, body of access and<br>venous outflow)                                                        | Procedure | CPT-4     |
| 99512 | Home visit for hemodialysis                                                                                                                                 | Procedure | CPT-4     |
| 99559 | Home infusion of peritoneal dialysis, per visit                                                                                                             | Procedure | CPT-4     |
| A4653 | Peritoneal dialysis catheter anchoring device, belt, each                                                                                                   | Procedure | HCPCS     |
| A4655 | Needles and syringes for dialysis                                                                                                                           | Procedure | HCPCS     |
| A4671 | Disposable cyler set used with cyler dialysis machine, each                                                                                                 | Procedure | HCPCS     |
| A4672 | Drainage extension line, sterile, for dialysis, each                                                                                                        | Procedure | HCPCS     |
| A4673 | Extension line with easy lock connectors, used with dialysis                                                                                                | Procedure | HCPCS     |
| A4674 | Chemicals/antiseptics solution used to clean/sterilize dialysis equipment, per 8 oz                                                                         | Procedure | HCPCS     |
| A4680 | Activated carbon filter for hemodialysis, each                                                                                                              | Procedure | HCPCS     |
| A4690 | Dialyzer (artificial kidneys), all types, all sizes, for hemodialysis, each                                                                                 | Procedure | HCPCS     |
| A4706 | Bicarbonate concentrate, solution, for hemodialysis, per gallon                                                                                             | Procedure | HCPCS     |
| A4707 | Bicarbonate concentrate, powder, for hemodialysis, per packet                                                                                               | Procedure | HCPCS     |
| A4708 | Acetate concentrate solution, for hemodialysis, per gallon                                                                                                  | Procedure | HCPCS     |
| A4709 | Acid concentrate, solution, for hemodialysis, per gallon                                                                                                    | Procedure | HCPCS     |
| A4714 | Treated water (deionized, distilled, or reverse osmosis) for peritoneal dialysis, per<br>gallon                                                             | Procedure | HCPCS     |
| A4719 | "Y set" tubing for peritoneal dialysis                                                                                                                      | Procedure | HCPCS     |
| A4720 | Dialysate solution, any concentration of dextrose, fluid volume greater than 249 cc,<br>but less than or equal to 999 cc, for peritoneal dialysis           | Procedure | HCPCS     |
| A4721 | Dialysate solution, any concentration of dextrose, fluid volume greater than 999 cc<br>but less than or equal to 1999 cc, for peritoneal dialysis           | Procedure | HCPCS     |

| Code  | Description                                                                                                                                     | Code      |           |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------|-----------|-----------|
|       |                                                                                                                                                 | Category  | Code Type |
| A4722 | Dialysate solution, any concentration of dextrose, fluid volume greater than 1999 cc but less than or equal to 2999 cc, for peritoneal dialysis | Procedure | HCPCS     |
| A4723 | Dialysate solution, any concentration of dextrose, fluid volume greater than 2999 cc but less than or equal to 3999 cc, for peritoneal dialysis | Procedure | HCPCS     |
| A4724 | Dialysate solution, any concentration of dextrose, fluid volume greater than 3999 cc but less than or equal to 4999 cc, for peritoneal dialysis | Procedure | HCPCS     |
| A4725 | Dialysate solution, any concentration of dextrose, fluid volume greater than 4999 cc but less than or equal to 5999 cc, for peritoneal dialysis | Procedure | HCPCS     |
| A4726 | Dialysate solution, any concentration of dextrose, fluid volume greater than 5999 cc, for peritoneal dialysis                                   | Procedure | HCPCS     |
| A4728 | Dialysate solution, nondextrose containing, 500 ml                                                                                              | Procedure | HCPCS     |
| A4730 | Fistula cannulation set for hemodialysis, each                                                                                                  | Procedure | HCPCS     |
| A4735 | Local/topical anesthetics for dialysis only                                                                                                     | Procedure | HCPCS     |
| A4736 | Topical anesthetic, for dialysis, per g                                                                                                         | Procedure | HCPCS     |
| A4737 | Injectable anesthetic, for dialysis, per 10 ml                                                                                                  | Procedure | HCPCS     |
| A4740 | Shunt accessory, for hemodialysis, any type, each                                                                                               | Procedure | HCPCS     |
| A4750 | Blood tubing, arterial or venous, for hemodialysis, each                                                                                        | Procedure | HCPCS     |
| A4755 | Blood tubing, arterial and venous combined, for hemodialysis, each                                                                              | Procedure | HCPCS     |
| A4760 | Dialysate solution test kit, for peritoneal dialysis, any type, each                                                                            | Procedure | HCPCS     |
| A4765 | Dialysate concentrate, powder, additive for peritoneal dialysis, per packet                                                                     | Procedure | HCPCS     |
| A4766 | Dialysate concentrate, solution, additive for peritoneal dialysis, per 10 ml                                                                    | Procedure | HCPCS     |
| A4770 | Blood collection tube, vacuum, for dialysis, per 50                                                                                             | Procedure | HCPCS     |
| A4771 | Serum clotting time tube, for dialysis, per 50                                                                                                  | Procedure | HCPCS     |
| A4772 | Blood glucose test strips, for dialysis, per 50                                                                                                 | Procedure | HCPCS     |
| A4773 | Occult blood test strips, for dialysis, per 50                                                                                                  | Procedure | HCPCS     |
| A4774 | Ammonia test strips, for dialysis, per 50                                                                                                       | Procedure | HCPCS     |
| A4780 | Sterilizing agent for dialysis equipment, per gallon                                                                                            | Procedure | HCPCS     |
| A4790 | Cleansing agents for equipment for dialysis only                                                                                                | Procedure | HCPCS     |
| A4800 | Heparin for dialysis and antidote, any strength, porcine or beef, up to 1000 units, 10-30 ml (for parenteral use see b4216)                     | Procedure | HCPCS     |
| A4801 | Heparin, any type, for hemodialysis, per 1000 units                                                                                             | Procedure | HCPCS     |
| A4802 | Protamine sulfate, for hemodialysis, per 50 mg                                                                                                  | Procedure | HCPCS     |
| A4820 | Hemodialysis kit supplies                                                                                                                       | Procedure | HCPCS     |
| A4850 | Hemostats with rubber tips for dialysis                                                                                                         | Procedure | HCPCS     |
| A4860 | Disposable catheter tips for peritoneal dialysis, per 10                                                                                        | Procedure | HCPCS     |
| A4870 | Plumbing and/or electrical work for home hemodialysis equipment                                                                                 | Procedure | HCPCS     |
| A4880 | Storage tanks utilized in connection with water purification system, replacement tanks for dialysis                                             | Procedure | HCPCS     |
| A4890 | Contracts, repair and maintenance, for hemodialysis equipment                                                                                   | Procedure | HCPCS     |
| A4900 | Continuous ambulatory peritoneal dialysis (capd) supply kit                                                                                     | Procedure | HCPCS     |
| A4901 | Continuous cycling peritoneal dialysis (ccpd) supply kit                                                                                        | Procedure | HCPCS     |
| A4905 | Intermittent peritoneal dialysis (ipd) supply kit                                                                                               | Procedure | HCPCS     |
| A4910 | Non-medical supplies for dialysis, (i.e., scale, scissors, stopwatch, etc.)                                                                     | Procedure | HCPCS     |

|       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Category  | Code Type |
| C7515 | Dialysis circuit, introduction of needle(s) and/or catheter(s), with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, with dialysis circuit permanent endovascular embolization or occlusion of main circuit or any accessory veins, including all required imaging, radiological supervision and interpretation, image documentation and report         | Procedure | HCPCS     |
| C7530 | Dialysis circuit, introduction of needle(s) and/or catheter(s), with diagnostic angiography of the dialysis circuit, including all direct puncture(s) and catheter placement(s), injection(s) of contrast, all necessary imaging from the arterial anastomosis and adjacent artery through entire venous outflow including the inferior or superior vena cava, fluoroscopic guidance, with transluminal balloon angioplasty, peripheral dialysis segment, including all imaging and radiological supervision and interpretation necessary to perform the angioplasty and all angioplasty in the central dialysis segment | Procedure | HCPCS     |
| E1500 | Centrifuge, for dialysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Procedure | HCPCS     |
| E1520 | Heparin infusion pump for hemodialysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Procedure | HCPCS     |
| E1530 | Air bubble detector for hemodialysis, each, replacement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Procedure | HCPCS     |
| E1540 | Pressure alarm for hemodialysis, each, replacement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Procedure | HCPCS     |
| E1550 | Bath conductivity meter for hemodialysis, each                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Procedure | HCPCS     |
| E1560 | Blood leak detector for hemodialysis, each, replacement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Procedure | HCPCS     |
| E1575 | Transducer protectors/fluid barriers, for hemodialysis, any size, per 10                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Procedure | HCPCS     |
| E1580 | Unipuncture control system for hemodialysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Procedure | HCPCS     |
| E1590 | Hemodialysis machine                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Procedure | HCPCS     |
| E1592 | Automatic intermittent peritoneal dialysis system                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Procedure | HCPCS     |
| E1594 | Cycler dialysis machine for peritoneal dialysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Procedure | HCPCS     |
| E1600 | Delivery and/or installation charges for hemodialysis equipment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Procedure | HCPCS     |
| E1610 | Reverse osmosis water purification system, for hemodialysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Procedure | HCPCS     |
| E1615 | Deionizer water purification system, for hemodialysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Procedure | HCPCS     |
| E1620 | Blood pump for hemodialysis, replacement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Procedure | HCPCS     |
| E1625 | Water softening system, for hemodialysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Procedure | HCPCS     |
| E1629 | Tablo hemodialysis system for the billable dialysis service                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Procedure | HCPCS     |
| E1630 | Reciprocating peritoneal dialysis system                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Procedure | HCPCS     |
