Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

If you are using a web page screen reader and are unable to access this document, please contact the Sentinel Operations Center for assistance at info@sentinelsystem.org.

Overview for Request: cder_mpl1r_wp271

Request ID: cder_mpl1r_wp271_nsdp_v01

Requester: Center for Drug Evaluation and Research (CDER)

Request Description: In this report, we counted and described individuals in the Sentinel Distributed Database (SDD) with evidence of coronavirus disease 2019 (COVID-19) vaccinations. We identified individuals with at least one COVID-19 vaccination and calculated the timing between doses, overall and by brand. We additionally identified individuals with at least two COVID-19 vaccinations and characterized the timing between doses. We finally identified individuals with evidence of a booster COVID-19 vaccination.

Sentinel Routine Querying Module: Cohort Identification and Descriptive Analysis (CIDA) module, version 13.0.1

Data Source: We distributed this request to 14 Sentinel Data Partners (DPs) on May 17, 2024. The study period included data from November 1, 2020, to the January 31, 2024. Please see Appendix A for a list of available data dates for each Data Partner.

Study Design: We identified individuals of all ages in the Sentinel Distributed Database who received COVID-19 vaccines. This is a Type 2 analysis in the Query Request Package (QRP) documentation. We conducted these analyses in four separate runs:

Run 1: We examined patients who received at least one COVID-19 vaccine overall and stratified by age group, sex, year, calendar month, geographic region, and year-month-age group. We characterized the demographic and clinical characteristics of this cohort. We also summarized the time interval between the first and second doses.

Run 2: We examined patients who received at least two COVID-19 vaccines overall and stratified by sex, U.S. State and territory, and year-month-age group. We characterized the demographic and clinical characteristics of this cohort. We also summarized the time interval between the first and second doses.

Run 3: We examined patients who received at least one COVID-19 vaccine by vaccine brand (Pfizer-BioNTech, Moderna, Janssen, Other [including Novavax, or unspecified]) or by data source (only immunization information systems [IIS] data, only claims data, or both IIS and claims data). We summarized the time interval between first and second doses for all possible combinations of brand or data source.

Run 4: We examined the number of patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021. We defined boosters using four different cohorts:

Cohort 1: Individuals with evidence of at least two vaccine codes more than four days apart prior to their booster dose.
Cohort 2: Individuals with a history of an immunocompromising condition, and evidence of at least three vaccine codes more than four days apart prior to their booster dose.
Cohort 3: Individuals without a history of an immunocompromising condition, and evidence of at least two vaccine codes more than four days apart prior to their booster dose.
Cohort 4: Individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine.

We examined the overall patient count in each cohort. Cohort 1 was further stratified by sex, geographic region, and year-month-age group. For this cohort, we additionally described the demographic and clinical characteristics.

Exposures of Interest: Our exposure of interest was any brand and type of COVID-19 vaccine administered or dispensed in any care setting in the United States (Pfizer-BioNTech, Moderna, Janssen, Novavax, or unspecified). These were defined using Healthcare Common Procedure Coding System (HCPCS) procedure codes, Current Procedural Terminology, Fourth Edition (CPT-4) procedure codes, National Drug Codes (NDCs), and IIS Vaccine Administered Code Set (CVX)[1] codes. Please see Appendix B for a list of non-proprietary and proprietary names of medical products, Appendix B.1 for a list of NDCs, and Appendix C for a list of procedure codes used to define exposures in this request.
We included only the first valid index date during the query period for each patient; cohort re-entry was not allowed. If more than one vaccine code appeared on the index day, the patient still only contributed one exposure episode, but all codes were taken into account for brand and data source analyses. Additional details on exposures and index dates for each run are defined below:

Overview for Request: cder_mpl1r_wp271

Run 1: The index date was the date of the first COVID-19 vaccine. The first COVID-19 vaccination was identified as the first instance without any previous COVID-19 vaccination records.
Run 2: The index date was the date of the first COVID-19 vaccine. The first COVID-19 vaccination was identified as the first instance without any previous COVID-19 vaccination records. Individuals were also required to have evidence of a second dose at least four days after the index date.
Run 3: The index date was the date of the first COVID-19 vaccine with a given brand or data source for a given cohort. The first COVID-19 vaccination was identified as the first instance without any previous COVID-19 vaccination records. We included 16 cohorts based on brand combinations for first and second dose (Pfizer-Pfizer, Moderna-Moderna, Janssen-Janssen, Other-Other, Pfizer-Moderna, Pfizer-Janssen, Pfizer-Other, Moderna-Pfizer, Moderna-Janssen, Moderna-Other, Janssen-Pfizer, Janssen-Moderna, Janssen-Other, Other-Pfizer, Other-Moderna, and Other-Janssen) and 9 cohorts based on data source combinations for first and second dose (Only IIS-Only IIS, Only IIS-IIS&Claims, Only IIS-Only Claims, Only Claims-Only Claims, Only Claims-IIS&Claims, Only Claims-Only IIS, IIS&Claims-Only IIS, IIS&Claims-Only Claims, and IIS&Claims-IIS&Claims).
Run 4: The index date was the date of the COVID-19 vaccine booster. The COVID-19 vaccine booster was defined as any COVID-19 vaccine observed after September 1, 2021, with two prior vaccine codes (for all and non-immunocompromised cohorts) or three prior vaccine codes (for immunocompromised cohorts) more than four days apart.

Cohort Eligibility Criteria: We required members to have medical and drug coverage for a minimum of 183 days before the index date; gaps in coverage of up to 45 days were allowed and considered continuous enrollment. Individuals of the following ages were included in the cohorts: 0-6 months, 6 months-4 years, 5-11, 12-15, 16-39, 40-64, and ≥ 65 years.

Inclusion/Exclusion Criteria: In Runs 1, 2, and 3 we excluded evidence of any prior COVID-19 vaccination records before the index date. This was to ensure that the first dose index date was date of the first ever COVID-19 vaccination record to occur. In Run 2, we added an inclusion criteria so that individuals were also required to have received a second COVID-19 vaccine dose at least four days after their first dose. We also excluded patients that had a duplicate vaccine code in the days 1-4 after the index event. This was to remove competing censoring events when evaluating the timing between the first and second dose (see Follow-up Time section below).
For Run 4, we had different inclusion criteria requirements for each of the four cohorts. For the overall booster cohort (cohort 1), we required patients to have two previous COVID-19 vaccine codes at least 4 days apart, at least 4 days before the index dose. For the immunocompromised cohort (cohort 2), we required patients to have three previous COVID-19 vaccine codes at least 4 days apart, at least 4 days before the index dose. We also required patients to have evidence of an immunocompromising condition in their enrollment history. We defined immunocompromised as any evidence of HIV/AIDS, hematological malignancy, treatment-independent immune deficiencies, dialysis, chemotherapeutic agents/diagnoses and procedures, immunosuppressant therapeutic agents/diagnoses and procedures, steroid diagnoses and procedures, organ transplant diagnoses and procedures, or solid malignancies. For the non-immunocompromised cohort (cohort 3), we required patients to have two previous COVID-19 vaccine codes at least 4 days apart, at least 4 days before the index dose. We also required patients to not have any evidence of an immunocompromising condition in their enrollment history. For the booster-specific code cohort (cohort 4), we did not have any additional inclusion or exclusion criteria. Please see Appendix D for a list of the codes used to define the inclusion and exclusion criteria.

Follow-up Time: For all cohorts where we evaluated the timing between first and second COVID-19 vaccine doses, any COVID-19 vaccine codes that occurred within 1-4 days after the index date were defined as duplicate first dose codes and subsequently ignored when assessing timing to second dose. Therefore, follow-up began on day 5 after the index dispensing and continued until the first occurrence of any of the following: 1) evidence of a second dose; 2) disenrollment; 3) death; 4) the end of the data provided by each Data Partner; or 5) the end of the query period.

Overview for Request: cder_mpl1r_wp271

Baseline Characteristics: Baseline characteristics were included for the cohorts in Run 1, Run 2, and the overall booster cohort from Run 4. We described demographic characteristics (such as sex, age, race, and ethnicity) and calendar year of the index date. We also assessed clinical characteristics in the 183 days prior to and including the index date. These characteristics included health conditions associated with severe COVID-19 outcomes (reactive airway disease and lung diseases, other chronic respiratory diseases, sickle cell disease, liver disease, tuberculosis, cystic fibrosis, congenital or acquired heart disease, lung cancer, breast cancer, colorectal cancer, prostate cancer, endometrial cancer, other cancer, asthma, chronic obstructive pulmonary disease [COPD] and bronchiectasis, diabetes, chronic kidney disease, hypertension, acute myocardial infarction, atrial fibrillation, heart failure, ischemic heart disease, stroke/transient ischemic attack, history of cardiac arrest, history of coronary angioplasty or bypass, Alzheimer's disease/dementia, depression, bipolar or other depressive mood disorders, attention-deficit/hyperactivity disorder, alcohol abuse or dependence, drug abuse or dependence, obesity, smoking, and immunocompromised [HIV/AIDS, hematological malignancy, treatment-dependent immune deficiencies, dialysis, chemotherapeutic agents, immunosuppressant treatments, steroids, organ transplant, or solid malignancies) and other general health indicators (hyperlipidemia, rheumatoid arthritis/osteoarthritis, acquired hypothyroidism, glaucoma, osteoporosis, anemia, benign prostatic hyperplasia, hip/pelvic fracture, cataracts, and Parkinson's disease/secondary parkinsonism). We assessed evidence of cerebral palsy, spinal cord injuries, and down syndrome in patients' entire available history. We further evaluated COVID-19 diagnoses and related treatments (including lopinavir/ritonavir, remdesivir, hydroxychloroquine, chloroquine, azithromycin, ivermectin, dexamethasone, other corticosteroids, inhaled corticosteroids, Paxlovid, baricitinib, tocilizumab, bamlanivimab, casirivimab/imdevimab, bamlanivimab/etesevimab, sotrovimab, non-steroidal anti-inflammatory drugs, and antidepressants) in the 183 days before and including the index date, and separately in the 183 days after the index date. We reported additional details about the index COVID-19 vaccine at the index date, such as brand (Pfizer-BioNTech, Moderna, Janssen, Novavax, or unspecified), COVID-19 vaccine code type (CVX codes or NDC/CPT-4/HCPCS codes), monovalent or bivalent (only in Pfizer-BioNTech, Moderna vaccines), and percentage of duplicated codes in the 1-4 days after the index date. We used International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes, International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) procedure codes, HCPCS procedure codes, CPT-4 procedure codes, and NDCs to define the clinical characteristics and treatments. Please see Appendix E for a list of diagnosis and procedure codes used to define baseline characteristics in this request, Appendix F for a list of non-proprietary and proprietary names of medical products.

Please refer to Appendices G and H for the specifications of parameters used in this request and a design diagram.

Limitations: Algorithms used to define exposures and inclusion criteria are imperfect; thus, it is possible that there may be misclassification. Therefore, data should be interpreted with this limitation in mind.

Notes: Please contact the Sentinel Operations Center (info@sentinelsystem.org) for questions and to provide comments/suggestions for future enhancements to this document. For more information on Sentinel's routine querying modules, please refer to the documentation (https://dev.sentinelsystem.org/projects/SETINEL/repos/sentinel-routine-querying-tool-documentation/browse).

Appendix H Design Diagram Used for this Request

Glossary of Terms for Analyses Using
Cohort Identification and Descriptive Analysis (CIDA) Module*

Amount Supplied - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.
Blackout Period - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.
Care Setting - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency Department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). The Care Setting, along with the Principal Diagnosis Indicator (PDX), forms the Care Setting/PDX parameter.

- **Ambulatory Visit (AV) -** includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.
- **Emergency Department (ED) -** includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.
- **Inpatient Hospital Stay (IP) -** includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.
- **Non-Acute Institutional Stay (IS) -** includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.
- **Other Ambulatory Visit (OA) -** includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Charlson/Elixhauser Combined Comorbidity Score - calculated based on comorbidities observed during a requester-defined window around the exposure episode start date (e.g., in the 183 days prior to index).
Code Days - the minimum number of times the diagnosis must be found during the evaluation period in order to fulfill the algorithm to identify the corresponding patient characteristic.
Cohort Definition (drug/exposure) - indicates how the cohort will be defined: 01: Cohort includes only the first valid treatment episode during the query period; 02: Cohort includes all valid treatment episodes during the query period; 03: Cohort includes all valid treatment episodes during the query period until an event occurs.
Computed Start Marketing Date - represents the first observed dispensing date among all valid users within a GROUP (scenario) within each Data Partner site.
Days Supplied - number of days supplied for all dispensings in qualifying treatment episodes.
Eligible Members - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period.
Enrollment Gap - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.
Episodes - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.
Episode Gap - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.
Event Deduplication - specifies how events are counted by the Modular Program (MP) algorithm: 0: Counts all occurrences of a health outcome of interest (HOI) during an exposure episode; 1: de-duplicates occurrences of the same HOI code and code type on the same day; 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).
Exposure Episode Length - number of days after exposure initiation that is considered "exposed time."
Exposure Extension Period - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions are added after any episode gaps have been bridged.
Lookback Period - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

Glossary of Terms for Analyses Using
Cohort Identification and Descriptive Analysis (CIDA) Module*

Maximum Episode Duration - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.
Member-Years - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.
Minimum Days Supplied - specifies a minimum number of days in length of the days supplied for the episode to be considered.
Minimum Episode Duration - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.
Monitoring Period - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.
Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.
Query Period - period in which the modular program looks for exposures and outcomes of interest.
Switch Evaluation Step Value - value used to differentiate evaluation step. Each switch pattern can support up to 2 evaluation steps (0 = switch pattern evaluation start; 1 = first evaluation; 2 = second evaluation).
Switch Gap Inclusion Indicator - indicator for whether gaps in treatment episodes that are included in a switch episode will be counted as part of the switch episode duration.
Switch Pattern Cohort Inclusion Date - indicates which date to use for inclusion into the switch pattern cohort of interest as well as optionally as the index date of the treatment episode initiating the switch pattern. Valid options are the product approval date, product marketing date, other requester defined date, or computed start marketing date.
Switch Pattern Cohort Inclusion Strategy - indicates how the switch pattern cohort inclusion date will be used: 01: used only as a switch cohort entry date. First treatment episode dispensing date is used as index for computing time to first switch; 02: used as switch cohort entry date and as initial switch step index date for computing time to first switch.
Treatment Episode Truncation Indicator - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.
Washout Period (drug/exposure) - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.
Washout Period (event/outcome) - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.
Years at Risk - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

Table 1 r01. Aggregated Characteristics of Patients with At Least One Dose of Coronavirus Disease 2019 (COVID-19) Vaccination[1] the Sentinel Distributed Database

	With At Least One Coronavirus Disease 2019 (COVID-19) Vaccination	
COVID-19 Vaccination		
Duplicated COVID-19 vaccine records *(having evidence of days with any COVID-19 vaccine codes 1-4 after the index date [not including the index])*	233,258	0.6%
COVID-19 Vaccine Brand for the First Observed Record		
Pfizer at index	21,480,531	55.7%
Moderna at index	15,409,521	39.9%
Jannsen at index	1,694,574	4.4%
Novavax at index	4,546	0.0%
Unspecified at index	101,747	0.3%
Other (including Janssen, Novavax, or Unspecified) at index	1,796,746	4.7%
Having both Pfizer and Moderna at the index	39,348	0.1%
Having both Pfizer and Other at the index	36,498	0.1%
Having both Moderna and Other at the index	35,715	0.1%
Having both Pfizer and Moderna 1-4 days after the index	604	0.0%
Having both Pfizer and Other 1-4 days after the index	149	0.0%
Having both Moderna and Other 1-4 days after the index	132	0.0%
Only Pfizer at index	21,404,824	55.5%
Only Moderna at index	15,334,597	39.8%
Only Jannsen at index	1,680,266	4.4%
Only Novavax at index	4,388	0.0%
Only Unspecified at index	35,916	0.1%
Only Other (including Janssen, Novavax, or Unspecified) at index	1,724,672	4.5%
COVID-19 Vaccine Code Type for the First Observed Record		
Insurance claims data (National Drug Codes[NDC]/Current Procedural Terminology[CPT]/Healthcare Common Procedure Coding System [HCPCS] codes) at index	34,905,903	90.5%
State-based Immunization Information Systems (IIS) (Vaccine Administered Code Set [CVX] codes) at index	8,027,823	20.8%
Having both IIS and insurance claims data at index	4,358,350	11.3%
COVID-19 Vaccine Code Type for the First Observed Record		
Only Insurance claims data at index	30,547,553	79.2%
Only IIS data at index	3,669,473	9.5%

Table 1 r01. Aggregated Characteristics of Patients with At Least One Dose of Coronavirus Disease 2019 (COVID-19) Vaccination[1] the Sentinel Distributed Database

	With At Least One Coronavirus Disease 2019 (COVID-19) Vaccination	
Having both insurance claims and IIS data 1-4 days after the index	21,278	0.1%
COVID-19 Vaccine for the First Observed Record; Monovalent or Bivalent (only Pfizer and Moderna)		
Monovalent at index	35,340,762	91.6%
Bivalent at index	1,523,475	3.9%
Having both Monovalent and Bivalent at index date	13,533	0.0%
Only Monovalent at index date	35,327,229	91.6%
Only Bivalent at index date	1,509,942	3.9%
Monovalent and Bivalent 4 days of index	109	0.0%
COVID-19 Vaccine for the First Observed Record; Whether the "dose1" is Mentioned in the Code Description		
COVID-19 Vaccine Dose 1	19,695,558	51.1%
COVID-19 Vaccine for the Second Observed Record; Whether the "dose2" is Mentioned in the Code Description		
COVID-19 Vaccine Dose 2	14,675,301	38.0%
Total Number of Observed Days with Records for the COVID-19 Vaccination after Index, Including the First Record		
With at least one COVID-19 vaccine codes	38,575,376	100.0%
With at least two COVID-19 vaccine codes in two separate days	30,342,790	78.7%
With at least three COVID-19 vaccine codes in three separate days	17,528,409	45.4%
With one COVID-19 vaccine	8,232,586	21.3%
With two COVID-19 vaccine in two separate days	12,814,381	33.2%
With three COVID-19 vaccine in three separate days	9,565,864	24.8%
With ≥4 COVID-19 vaccine codes in ≥4 separate days	7,962,545	20.6%
Health Characteristics		
Reactive Airway and Lung Diseases	8,683	0.0%
Other Chronic Respiratory Diseases (e.g., Pneumonia and Bronchitis)	1,564,650	4.1%
Sickle Cell Disease	21,499	0.1%
Liver disease (severe/moderate)	1,341,493	3.5%
Tuberculosis	25,474	0.1%
Cystic fibrosis	8,739	0.0%
Congenital or Acquired Heart Disease	226,117	0.6%
Lung Cancer	173,622	0.5%
Breast Cancer	651,175	1.7%
Colorectal Cancer	182,445	0.5%

[1]The cohort includes patients who received at least two COVID-19 vaccines. The index date is defined as the date of the first COVID-19 vaccination, identified as the first instance with no prior COVID-19 vaccination records. Additionally, individuals were required to have received a second dose at least four days after the index date. Patients with a duplicate vaccine code within 1-4 days after the index were excluded from the analysis.

[2]Value represents standard deviation where no % follows the value.

[3]Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

[4]In the covariate "Total number of observed records for the COVID-19 vaccination" after index, a small number of patients are recorded as having received only one COVID-19 vaccine. However, our cohort inclusion criteria require at least two COVID-19 vaccines (including index and after). This discrepancy arises because the assessment of covariates requires that claims occur during a valid enrollment span. For this query, both medical and drug coverage enrollment were necessary, meaning that any claim made during the enrollment period with only medical coverage, for instance, was not counted. This is the case for those few patients. Our cohort inclusion criteria consider all claims without restricting to those occurring during enrollment, which is why these patients are included in our cohort but not in our covariate.

Table 1 r04. Aggregated Characteristics of Patients with Booster Coronavirus Disease 2019 (COVID-19) Vaccine[1] in the Sentinel Distributed Database (SDD) from September

[1]The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. We defined boosters using four different cohorts:
- Cohort 1: Individuals with evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 2: Individuals with a history of an immunocompromising condition and evidence of at least three vaccine codes more than four days apart prior to their booster dose.
- Cohort 3: Individuals without a history of an immunocompromising condition and evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 4: Individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine.

This table presents baseline characteristics for Cohort 1 only. Baseline tables for Cohorts 2, 3, and 4 were not produced.

[2]Value represents standard deviation where no % follows the value.

[3]Race data may not be completely populated at all Data Partners; therefore, data about race may be incomplete.

[4]In the covariate "Total number of observed records for the COVID-19 vaccination" before index, a small number of patients are recorded as having received only one COVID-19 vaccine. However, our cohort inclusion criteria require at least two COVID-19 vaccines prior to the index date. This discrepancy arises because the assessment of covariates requires that claims occur during a valid enrollment span. For this query, both medical and drug coverage enrollment were necessary, meaning that any claim made during the enrollment period with only medical coverage, for instance, was not counted. This is the case for those few patients. Our cohort inclusion criteria consider all claims without restricting to those occurring during enrollment, which is why these patients are included in our cohort but not in our covariate.

[5]The Combined Comorbidity Score is calculated based on comorbidities observed during a requester-defined window around the exposure episode start date. (Gagne JJ, Glynn RJ, Avorn J, Levin R, Schneeweiss S. A Combined Comorbidity Score Predicted Mortality in Elderly Patients Better Than Existing Scores. J Clin Epidemiol. 2011;64(7):749-759; Sun JW, Rogers JR, Her Q, Welch EC, Panozzo CA, Toh S, Gagne JJ. Adaptation and Validation of the Combined Comorbidity Score for ICD-10-CM. Med Care. 2017;55(12):1046-1051)

Table 2 r01. Summary of Exposures of Interest (At Least One Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]
With At Least One Coronavirus Disease 2019 (COVID-19) Vaccination	38,575,376	146,209,200	2,638.37

[1] The cohort includes patients who received at least one COVID-19 vaccine. The index date is defined as the date of the first COVID-19 vaccination, which is identified as the first instance with no prior COVID-19 vaccination records.

[2]Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period. This quantity does not consider age-based vaccine eligibility.

Table 2 r02. Summary of Exposures of Interest (At Least Two Coronavirus Disease 2019 [COVID-19] Vaccines)[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]
With At Least Two Coronavirus Disease 2019 (COVID-19) Vaccines	30,109,785	38,716,649	7,776.96

[1]The cohort includes patients who received at least two COVID-19 vaccines. The index date is defined as the date of the first COVID-19 vaccination, identified as the first instance with no prior COVID-19 vaccination records. Additionally, individuals were required to have received a second dose at least four days after the index date. Patients with a duplicate vaccine code within 1-4 days after the index were excluded from the analysis.

[2]***Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.*** This quantity does not consider age-based vaccine eligibility.

Table 2 r03. Summary of Exposures of Interest (Combinations of Brand of Code Type for the First and Second Coronavirus Disease 2019 [COVID-19] Vaccine Records)[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

	Number of Patients with Only the First Component of the Combination[2]	Number of Exposure Episodes with First and Second Components of Combination[3]	Number of Eligible Members[4]	Number of Patients per 10,000 Eligible Members[4]
Coronavirus Disease 2019 (COVID-19) Vaccine Brand for the First and Second Observed Records				
With a first Pfizer COVID-19 vaccine followed by a second Pfizer COVID-19 vaccine (Pfizer-Pfizer combination)	21,480,531	16,967,289	146,209,200	1,469.16

With a first COVID-19 vaccine identified by claims and IIS codes, followed by a second COVID-19 vaccine also identified by claims and IIS codes (IIS and Claims-IIS and Claims combination)	4,358,350	3,624,130	8,028,304	5,428.73

Table 2 r03. Summary of Exposures of Interest (Combinations of Brand of Code Type for the First and Second Coronavirus Disease 2019 [COVID-19] Vaccine Records)[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

	Number of Patients with Only the First Component of the Combination[2]	Number of Exposure Episodes with First and Second Components of Combination[3]	Number of Eligible Members[4]	Number of Patients per 10,000 Eligible Members[4]

[1]The cohorts include patients who received at least one COVID-19 vaccine. Cohorts were defined based on vaccine brand (Pfizer-BioNTech, Moderna, Janssen, Other [including Novavax or unspecified]) and data source (immunization information systems [IIS] only, claims data only, or both IIS and claims data). The index date is the date of the first COVID-19 vaccination, identified as the first record with no prior COVID-19 vaccination records. We included 16 cohorts based on brand combinations for the first and second doses (Pfizer-Pfizer, Moderna-Moderna, Janssen-Janssen, Other-Other, Pfizer-Moderna, Pfizer-Janssen, Pfizer-Other, Moderna-Pfizer, Moderna-Janssen, Moderna-Other, Janssen-Pfizer, Janssen-Moderna, Janssen-Other, Other-Pfizer, Other-Moderna, and Other-Janssen) and 9 cohorts based on data source combinations for the first and second doses (Only IIS-Only IIS, Only IIS-IIS & Claims, Only IIS-Only Claims, Only Claims-Only Claims, Only Claims-IIS & Claims, Only Claims-Only IIS, IIS & Claims-Only IIS, IIS & Claims-Only Claims, and IIS & Claims-IIS & Claims).

[2]We first define the cohort as patients who received at least one COVID-19 vaccine. We then follow these patients for any subsequent records of a second COVID-19 vaccine. For each patient, we have information on the brand and data source of both the initial (index) and second COVID-19 vaccine. This column presents the number of patients based on the brand or data source of their initial COVID-19 vaccine.

[3]We first define the cohort as patients who received at least one COVID-19 vaccine. We then follow these patients for any subsequent records of a second COVID-19 vaccine. For each patient, we have information on the brand and data source of both the initial (index) and second COVID-19 vaccine. This column displays the number of patients who have received both their initial and second COVID-19 vaccines, categorized by the combination of vaccine brand and data source.

[4]***Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.*** This quantity does not consider age-based vaccine eligibility. We observe differences in the number of eligible members across the Code Type cohorts. For this cohort, the Code Type of interest was used to define the cohorts. Specifically, the Claims Code Type was defined using Healthcare Common Procedure Coding System (HCPCS) codes, Current Procedural Terminology, Fourth Edition (CPT-4) codes, and National Drug Codes (NDCs). The Immunization Information Systems (IIS) Code Type was defined using Vaccine Administered Code Set (CVX) codes.

Table 2 r04. Summary of Exposures of Interest (Booster Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from September 1, 2021 to January 31, 2024

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]
With Booster Coronavirus Disease 2019 (COVID-19) Vaccine [3]	19,510,553	34,598,324	5,639.16
With Booster COVID-19 Vaccine (Including Individuals Ever Immunocompromised) [4,5]	5,976,552	13,473,878	4,435.66
With Booster COVID-19 Vaccine (Excluding Individuals Ever Immunocompromised) [4,6]	7,772,502	16,032,849	4,847.86
With Booster COVID-19 Vaccine (Booster Specific Code) [7]	21,414,387	84,151,328	2,544.75

[1] The cohorts include patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. We defined boosters using four different cohorts:
- Cohort 1: Individuals with evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 2: Individuals with a history of an immunocompromising condition and evidence of at least three vaccine codes more than four days apart prior to their booster dose.
- Cohort 3: Individuals without a history of an immunocompromising condition and evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 4: Individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine.

[2] ***Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.*** This quantity does not consider age-based vaccine eligibility. We observe differences in the number of eligible members across the cohorts due to varying inclusion and exclusion criteria for each cohort.

[3] The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who have evidence of receiving at least two vaccine doses more than four days apart prior to their booster dose.

[4] Including any evidence of HIV/AIDS, Hematological Malignancy, Treatment-Independent Immune Deficiencies, Dialysis, Chemo Therapeutic Agents/ Diagnoses and Procedures, Immunosuppressant Therapeutic Agents/ Diagnoses and Procedures, Steroid Diagnoses and Procedures, Organ Transplant Diagnoses and Procedures, or Solid Malignancies any time before index.

[5] The cohort includes patients with evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals with a history of an immunocompromising condition and evidence of at least three vaccine doses more than four days apart prior to their booster dose.

[6] The cohort includes patients without evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals without a history of an immunocompromising condition and evidence of at least two vaccine doses more than four days apart prior to their booster dose.

[7] The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine. No prior evidence of having COVID-19 vaccination inclusion criteria was required for this cohort.

Table 3a r01. Summary of Exposures of Interest (At Least One Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024, by Sex

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]
With At Least One Coronavirus Disease 2019 (COVID-19) Vaccine			
Female	21,192,498	77,370,200	2,739.10
Male	17,382,878	68,839,000	2,525.15

[1]The cohort includes patients who received at least one COVID-19 vaccine. The index date is defined as the date of the first COVID-19 vaccination, which is identified as the first instance with no prior COVID-19 vaccination records.

[2]Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period. This quantity does not consider age-based vaccine eligibility.

Table 3b r01. Summary of Exposures of Interest (At Least One Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024, by Age Group

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]
With At Least One Coronavirus Disease 2019 (COVID-19) Vaccine			
0-6 months	19,444	1,291,970	150.50
7-59 months	252,552	10,750,517	234.92
5-11 years	1,049,954	17,223,866	609.59
12-15 years	967,134	10,395,255	930.36
16-39 years	7,103,637	43,590,709	1,629.62
40-64 years	10,145,602	35,352,112	2,869.87
≥ 65 years	19,037,053	33,463,237	5,688.95

[1]The cohort includes patients who received at least one COVID-19 vaccine. The index date is defined as the date of the first COVID-19 vaccination, which is identified as the first instance with no prior COVID-19 vaccination records.

[2]Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period. This quantity does not consider age-based vaccine eligibility.

Table 3c r01. Summary of Exposures of Interest (At Least One Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024, by Year

[1]The cohort includes patients who received at least one COVID-19 vaccine. The index date is defined as the date of the first COVID-19 vaccination, which is identified as the first instance with no prior COVID-19 vaccination records.

[2]Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period. This quantity does not consider age-based vaccine eligibility.

*****Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

Table 3a r02. Summary of Exposures of Interest (At Least Two Coronavirus Disease 2019 [COVID-19] Vaccines)[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024, by Sex

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]
With At Least Two Coronavirus Disease 2019 (COVID-19) Vaccines			
Female	16,639,352	21,271,177	7,822.49
Male	13,470,433	17,445,472	7,721.45

[1]The cohort includes patients who received at least two COVID-19 vaccines. The index date is defined as the date of the first COVID-19 vaccination, identified as the first instance with no prior COVID-19 vaccination records. Additionally, individuals were required to have received a second dose at least four days after the index date. Patients with a duplicate vaccine code within 1-4 days after the index were excluded from the analysis.

[2]Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period. This quantity does not consider age-based vaccine eligibility.

Missing	5,384	8,651	6,223.56

[1]The cohort includes patients who received at least two COVID-19 vaccines. The index date is defined as the date of the first COVID-19 vaccination, identified as the first instance with no prior COVID-19 vaccination records. Additionally, individuals were required to have received a second dose at least four days after the index date. Patients with a duplicate vaccine code within 1-4 days after the index were excluded from the analysis.

[2] American Samoa counts are included in the “Other” category.

[3] Due to data partners' data privacy restrictions, any data smaller than 25 has not been included (i.e., is regarded as 0). As a result, the sum of the numbers across all states is slightly smaller than the total number of patients.

[4] Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period. This quantity does not consider age-based vaccine eligibility.

*NaN: Not a number

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]
With At Least Two Coronavirus disease 2019 (COVID-19) Vaccines			
December	0	0	NaN
≥ 65 years, 2024			
January	0	0	NaN

[1]The cohort includes patients who received at least two COVID-19 vaccines. The index date is defined as the date of the first COVID-19 vaccination, identified as the first instance with no prior COVID-19 vaccination records. Additionally, individuals were required to have received a second dose at least four days after the index date. Patients with a duplicate vaccine code within 1-4 days after the index were excluded from the analysis.

[2]Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period. This quantity does not consider age-based vaccine eligibility.

*****Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

*NaN: Not a number

Table 3a r04. Summary of Exposures of Interest (Booster Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from September 1, 2021 to January 31, 2024, by Sex

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]
With Booster Coronavirus Disease 2019 (COVID-19) Vaccine[3]			
Female	10,938,777	19,067,560	5,736.85
Male	8,571,776	15,530,764	5,519.22
With Booster COVID-19 Vaccine (Including Individuals Ever Immunocompromised)[4,5]

With Booster COVID-19 Vaccine (Excluding Individuals Ever Immunocompromised)[4,6]			
Female	4,147,758	8,371,622	4,954.55
Male	3,624,744	7,661,227	4,731.28
With Booster COVID-19 Vaccine (Booster Specific Code)[7]			
Female	12,024,121	44,390,136	2,708.74
Male	9,390,266	39,761,192	2,361.67

Table 3a r04. Summary of Exposures of Interest (Booster Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from September 1, 2021 to January 31, 2024, by Sex

[1] The cohorts include patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. We defined boosters using four different cohorts:
- Cohort 1: Individuals with evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 2: Individuals with a history of an immunocompromising condition and evidence of at least three vaccine codes more than four days apart prior to their booster dose.
- Cohort 3: Individuals without a history of an immunocompromising condition and evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 4: Individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine.

[2] ***Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.*** This quantity does not consider age-based vaccine eligibility. We observe differences in the number of eligible members across the cohorts due to varying inclusion and exclusion criteria for each cohort.

[3] The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who have evidence of receiving at least two vaccine doses more than four days apart prior to their booster dose.

[4] Including any evidence of HIV/AIDS, Hematological Malignancy, Treatment-Independent Immune Deficiencies, Dialysis, Chemo Therapeutic Agents/ Diagnoses and Procedures, Immunosuppressant Therapeutic Agents/ Diagnoses and Procedures, Steroid Diagnoses and Procedures, Organ Transplant Diagnoses and Procedures, or Solid Malignancies any time before index.

[5] The cohort includes patients with evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals with a history of an immunocompromising condition and evidence of at least three vaccine doses more than four days apart prior to their booster dose.

[6] The cohort includes patients without evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals without a history of an immunocompromising condition and evidence of at least two vaccine doses more than four days apart prior to their booster dose.

[7] The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine. No prior evidence of having COVID-19 vaccination inclusion criteria was required for this cohort.

Table 3b r04. Summary of Exposures of Interest (Booster Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from September 1, 2021 to January 31, 2024, by US State and Territory[2]

	Number of Patients [3]	Number of Eligible Members[4]	Number of Patients per 10,000 Eligible Members[4]

[1] The cohorts include patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. We defined boosters using four different cohorts:
- Cohort 1: Individuals with evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 2: Individuals with a history of an immunocompromising condition and evidence of at least three vaccine codes more than four days apart prior to their booster dose.
- Cohort 3: Individuals without a history of an immunocompromising condition and evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 4: Individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine.

[2] American Samoa counts are included in the "Other" category.

[3] Due to data partners' data privacy restrictions, any data smaller than 25 has not been included (i.e., is regarded as 0). As a result, the sum of the numbers across all states is slightly smaller than the total number of patients.

[4]Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period. This quantity does not consider age-based vaccine eligibility. We observe differences in the number of eligible members across the cohorts due to varying inclusion and exclusion criteria for each cohort.

[5]The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who have evidence of receiving at least two vaccine doses more than four days apart prior to their booster dose.

[6]Including any evidence of HIV/AIDS, Hematological Malignancy, Treatment-Independent Immune Deficiencies, Dialysis, Chemo Therapeutic Agents/ Diagnoses and Procedures, Immunosuppressant Therapeutic Agents/ Diagnoses and Procedures, Steroid Diagnoses and Procedures, Organ Transplant Diagnoses and Procedures, or Solid Malignancies any time before index.

[7]The cohort includes patients with evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals with a history of an immunocompromising condition and evidence of at least three vaccine doses more than four days apart prior to their booster dose.

[8]The cohort includes patients without evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals without a history of an immunocompromising condition and evidence of at least two vaccine doses more than four days apart prior to their booster dose.

[9]The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine. No prior evidence of having COVID-19 vaccination inclusion criteria was required for this cohort.

*****Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.

Table 3c r04. Summary of Exposures of Interest (Booster Coronavirus Disease 2019 [COVID-19] Vaccine)[1] in the Sentinel Distributed Database (SDD) from September 1, 2021 to January 31, 2024, by Age Group, Year, and Month

	Number of Patients	Number of Eligible Members[2]	Number of Patients per 10,000 Eligible Members[2]

[1] The cohorts include patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. We defined boosters using four different cohorts:
- Cohort 1: Individuals with evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 2: Individuals with a history of an immunocompromising condition and evidence of at least three vaccine codes more than four days apart prior to their booster dose.
- Cohort 3: Individuals without a history of an immunocompromising condition and evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 4: Individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine.

[2] ***Eligible Members are reflective of the number of patients that met all cohort entry criteria on at least one day during the query period.*** This quantity does not consider age-based vaccine eligibility. We observe differences in the number of eligible members across the cohorts due to varying inclusion and exclusion criteria for each cohort.

[3] The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who have evidence of receiving at least two vaccine doses more than four days apart prior to their booster dose.

[4] Including any evidence of HIV/AIDS, Hematological Malignancy, Treatment-Independent Immune Deficiencies, Dialysis, Chemo Therapeutic Agents/ Diagnoses and Procedures, Immunosuppressant Therapeutic Agents/ Diagnoses and Procedures, Steroid Diagnoses and Procedures, Organ Transplant Diagnoses and Procedures, or Solid Malignancies any time before index.

[5] The cohort includes patients with evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals with a history of an immunocompromising condition and evidence of at least three vaccine doses more than four days apart prior to their booster dose.

[6] The cohort includes patients without evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals without a history of an immunocompromising condition and evidence of at least two vaccine doses more than four days apart prior to their booster dose.

[7] The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine. No prior evidence of having COVID-19 vaccination inclusion criteria was required for this cohort.

*****Data are not presented in these cells due to a small sample size or to assure a small cell cannot be recalculated through the cells presented.
*NaN: Not a number

Table 4 r01. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations Among Patients With at Least One COVID-19 Vaccine[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

			Number of Patients by Length of the Interval Between First and Second Coronavirus Disease 2019 (COVID-19) Vaccines[2]			
			1-10 days		11-17 days	
	Total Number of Patients with At Least One COVID-19 Vaccine	Total Number of Patients with Two COVID-19 Vaccines[3]	Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes
COVID-19 Vaccination	38,575,376	30,279,682	192,933	0.6%	9,947,271	32.9%

[1]The cohort includes patients who received at least one COVID-19 vaccine. The index date is defined as the date of the first COVID-19 vaccination, which is identified as the first instance with no prior COVID-19 vaccination records.

[2]The four days after the index date are not included; therefore, the interval calculation begins on day five after the index.

[3]Represents episodes of at least two COVID-19 vaccine codes in two separate days.

Table 4 r01. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations Among Patients With at Least One COVID-19 Vaccine1 in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

Number of Patients by Length of the Interval Between First and Second Coronavirus Disease 2019 (COVID-19) Vaccines2							
18-21 days		22-24 days		25-27 days		28-40 days

2,498,914	8.3%	8,180,901	27.0%	1,719,393	5.7%	1,390,191	4.6%

[1]The cohort includes patients who received at least one COVID-19 vaccine. The index date is defined as the date of the first COVID-19 vaccination, which is identified as the first instance with no prior COVID-19 vaccination records.

[2]The four days after the index date are not included; therefore, the interval calculation begins on day five after the index.

[3]Represents episodes of at least two COVID-19 vaccine codes in two separate days.

Table 4 r01. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations Among Patients With at Least One COVID-19 Vaccine1 in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

Number of Patients by Length of the Interval Between First and Second Coronavirus Disease 2019 (COVID-19) Vaccines2												
41-50 days		51-60 days		61+ days		Distribution of At-Risk Time in Days, by Episode						
Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes	Minimum	Q1	Median	Q3	Maximum	Mean	Standard Deviation
146,080	0.5%	97,528	0.3%	6,106,471	20.2%	1	17	24	28	1,015	66.6	100.0

[1]The cohort includes patients who received at least one COVID-19 vaccine. The index date is defined as the date of the first COVID-19 vaccination, which is identified as the first instance with no prior COVID-19 vaccination records.

[2]The four days after the index date are not included; therefore, the interval calculation begins on day five after the index.

[3]Represents episodes of at least two COVID-19 vaccine codes in two separate days.

Table 4 r02. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations Among Patients With At Least Two COVID-19 Vaccines[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

			Number of Patients by Length of the Interval Between First and Second Coronavirus Disease 2019 (COVID-19) Vaccines[2]			
			1-10 days		11-17 days	
	Total Number of Patients with At Least Two COVID-19 Vaccines	Total Number of Patients with Two COVID-19 Vaccines[3]	Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes
COVID-19 Vaccination	30,109,785	30,070,466	176,125	0.6%	9,905,438	32.9%

[1]The cohort includes patients who received at least two COVID-19 vaccines. The index date is defined as the date of the first COVID-19 vaccination, identified as the first instance with no prior COVID-19 vaccination records. Additionally, individuals were required to have received a second dose at least four days after the index date. Patients with a duplicate vaccine code within 1-4 days after the index were excluded from the analysis.

[2]The four days after the index date are not included; therefore, the interval calculation begins on day five after the index.

[3]Represents episodes of at least two COVID-19 vaccine codes in two separate days. A small subset of patients do not appear to have received their second COVID-19 vaccine and thus are not included in the calculation of the time interval between the first and second COVID-19 vaccines. This is despite our cohort inclusion criteria requiring at least two COVID-19 vaccines. This discrepancy arises because to assess the time between the first and second COVID-19 vaccinations, the second vaccination is considered as one of the "end of follow-up" points. For a small number of patients, an earlier "end of follow-up" point, such as disenrollment/re-enrollment, occurred before the second vaccine. Consequently, the follow-up ended at this point and did not extend until the second vaccine was observed.

Table 4 r02. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations Among Patients With At Least Two COVID-19 Vaccines1 in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

18-21 days		22-24 days		25-27 days		28-40 days	
Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes
2,462,168	8.2%	8,135,967	27.1%	1,686,872	5.6%	1,379,441	4.6%

[1]The cohort includes patients who received at least two COVID-19 vaccines. The index date is defined as the date of the first COVID-19 vaccination, identified as the first instance with no prior COVID-19 vaccination records. Additionally, individuals were required to have received a second dose at least four days after the index date. Patients with a duplicate vaccine code within 1-4 days after the index were excluded from the analysis.

[2]The four days after the index date are not included; therefore, the interval calculation begins on day five after the index.

[3]Represents episodes of at least two COVID-19 vaccine codes in two separate days. A small subset of patients do not appear to have received their second COVID-19 vaccine and thus are not included in the calculation of the time interval between the first and second COVID-19 vaccines. This is despite our cohort inclusion criteria requiring at least two COVID-19 vaccines. This discrepancy arises because to assess the time between the first and second COVID-19 vaccinations, the second vaccination is considered as one of the "end of follow-up" points. For a small number of patients, an earlier "end of follow-up" point, such as disenrollment/re-enrollment, occurred before the second vaccine. Consequently, the follow-up ended at this point and did not extend until the second vaccine was observed.

Table 4 r02. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations Among Patients With At Least Two COVID-19 Vaccines1 in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

41-50 days		51-60 days		61+ days		Distribution of At-Risk Time in Days, by Episode						
Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes	Number of Episodes	Percent of Total Episodes	Minimum	Q1	Median	Q3	Maximum	Mean	Standard Deviation

Table 4 r03. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations (Combinations of Brand or Code Type for the First and Second COVID-19 Vaccine Records) Among Patients with At Least One COVID-19 Vaccine[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

			Number of Patients by Length of the Interval Between First and Second Coronavirus Disease 2019 (COVID-19) Vaccines[2]	
			1-10 days	
	Number of Patients with Only the First Component of the Combination[3]	Number of Exposure Episodes with First and Second Components of Combination [4]	Number of Episodes	Percent of Total Episodes
With a first COVID-19 vaccine identified only by claims codes, followed by a second COVID-19 vaccine also identified only by IIS codes (Only Claims-Only IIS combination)	30,547,553	125,712	9,035	7.2%
With a first COVID-19 vaccine identified only by IIS codes, followed by a second COVID-19 vaccine also identified only by claims codes (Only IIS-Only claims combination)	3,669,473	376,045	16,429	4.4%
With a first COVID-19 vaccine identified only by claims codes, followed by a second COVID-19 vaccine also identified by claims and IIS codes (Only Claims-Claims and IIS combination)	30,547,553	236,587	1,652	0.7%
With a first COVID-19 vaccine identified only by IIS codes, followed by a second COVID-19 vaccine also identified by claims and IIS codes (Only IIS-IIS and Claims combination)	3,669,473	1,473,864	9,412	0.6%
With a first COVID-19 vaccine identified by claims and IIS codes, followed by a second COVID-19 vaccine also identified only by IIS codes (Claims and IIS-Only IIS combination)	4,358,350	740,334	7,496	1.0%
With a first COVID-19 vaccine identified by claims and IIS codes, followed by a second COVID-19 vaccine also identified only by claims codes (IIS and Claims-Only Claims combination)	4,358,350	500,044	1,668	0.3%
With a first COVID-19 vaccine identified by claims and IIS codes, followed by a second COVID-19 vaccine also identified by claims and IIS codes (IIS and Claims-IIS and Claims combination)	4,358,350	3,624,130	2,711	0.1%

Table 4 r03. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations (Combinations of Brand or Code Type for the First and Second COVID-19 Vaccine Records) Among Patients with At Least One COVID-19 Vaccine[1] in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024

			Number of Patients by Length of the Interval Between First and Second Coronavirus Disease 2019 (COVID-19) Vaccines[2]	
			1-10 days	
	Number of Patients with Only the First Component of the Combination[3]	Number of Exposure Episodes with First and Second Components of Combination [4]	Number of Episodes	Percent of Total Episodes

[1]The cohorts include patients who received at least one COVID-19 vaccine. Cohorts were defined based on vaccine brand (Pfizer-BioNTech, Moderna, Janssen, Other [including Novavax or unspecified]) and data source (immunization information systems [IIS] only, claims data only, or both IIS and claims data). The index date is the date of the first COVID-19 vaccination, identified as the first record with no prior COVID-19 vaccination records. We included 16 cohorts based on brand combinations for the first and second doses (Pfizer-Pfizer, Moderna-Moderna, Janssen-Janssen, Other-Other, Pfizer-Moderna, Pfizer-Janssen, Pfizer-Other, Moderna-Pfizer, Moderna-Janssen, Moderna-Other, Janssen-Pfizer, Janssen-Moderna, Janssen-Other, Other-Pfizer, Other-Moderna, and Other-Janssen) and 9 cohorts based on data source combinations for the first and second doses (Only IIS-Only IIS, Only IIS-IIS & Claims, Only IIS-Only Claims, Only Claims-Only Claims, Only Claims-IIS & Claims, Only Claims-Only IIS, IIS & Claims-Only IIS, IIS & Claims-Only Claims, and IIS & Claims-IIS & Claims).

[2]The four days after the index date are not included; therefore, the interval calculation begins on day five after the index.

[3]We first define the cohort as patients who received at least one COVID-19 vaccine. We then follow these patients for any subsequent records of a second COVID-19 vaccine. For each patient, we have information on the brand and data source of both the initial (index) and second COVID-19 vaccine. This column presents the number of patients based on the brand or data source of their initial COVID-19 vaccine.

[4]We first define the cohort as patients who received at least one COVID-19 vaccine. We then follow these patients for any subsequent records of a second COVID-19 vaccine. For each patient, we have information on the brand and data source of both the initial (index) and second COVID-19 vaccine. This column displays the number of patients who have received both their initial and second COVID-19 vaccines in two separate days, categorized by the combination of vaccine brand and data source.

Table 4 r03. Summary of the Length of the Interval Between the First and Second Observed Coronavirus Disease 2019 (COVID-19) Vaccinations (Combinations of Brand or Code Type for the First and Second COVID-19 Vaccine Records) Among Patients with At Least One COVID-19 Vaccine1 in the Sentinel Distributed Database (SDD) from November 1, 2020 to January 31, 2024
