[1]The cohort includes patients who received at least two COVID-19 vaccines. The index date is defined as the date of the first COVID-19 vaccination, identified as the first instance with no prior COVID-19 vaccination records. Additionally, individuals were required to have received a second dose at least four days after the index date. Patients with a duplicate vaccine code within 1-4 days after the index were excluded from the analysis.

[2]The code category is defined as PX or RX: PX stands for "Procedure," and RX stands for "Dispensing."

[3]Code type is defined as C4, ND, or CV: C4 refers to Current Procedural Terminology, Fourth Edition (CPT-4); ND stands for National Drug Codes (NDCs); and CV represents the immunization information systems (IIS) Vaccine Administered Code Set (CVX) codes.

[4]Encounter Care Setting is defined as AV, OA, ED, IP, or IS: AV stands for Ambulatory Visit; OA refers to Other Ambulatory Visit; ED means Emergency Department; IP denotes Inpatient Hospital Stay; and IS represents Non-Acute Institutional Stay.
N/A stands for Not Applicable.

We included 16 cohorts based on brand combinations for the first and second doses (Pfizer-Pfizer, Moderna-Moderna, Janssen-Janssen, Other-Other, Pfizer-Moderna, Pfizer-Janssen, Pfizer-Other, Moderna-Pfizer, Moderna-Janssen, Moderna-Other, Janssen-Pfizer, Janssen-Moderna, Janssen-Other, Other-Pfizer, Other-Moderna, and Other-Janssen) and 9 cohorts based on data source combinations for the first and second doses (Only IIS-Only IIS, Only IIS-IIS & Claims, Only IIS-Only Claims, Only Claims-Only Claims, Only Claims-IIS & Claims, Only Claims-Only IIS, IIS & Claims-Only IIS, IIS & Claims-Only Claims, and IIS & Claims-IIS & Claims).

[2]Patients can meet multiple inclusion and/or exclusion criteria; therefore, the total number of patients excluded overall may not equal the sum of all patients in each criterion.

We included 16 cohorts based on brand combinations for the first and second doses (Pfizer-Pfizer, Moderna-Moderna, Janssen-Janssen, Other-Other, Pfizer-Moderna, Pfizer-Janssen, Pfizer-Other, Moderna-Pfizer, Moderna-Janssen, Moderna-Other, Janssen-Pfizer, Janssen-Moderna, Janssen-Other, Other-Pfizer, Other-Moderna, and Other-Janssen) and 9 cohorts based on data source combinations for the first and second doses (Only IIS-Only IIS, Only IIS-IIS & Claims, Only IIS-Only Claims, Only Claims-Only Claims, Only Claims-IIS & Claims, Only Claims-Only IIS, IIS & Claims-Only IIS, IIS & Claims-Only Claims, and IIS & Claims-IIS & Claims).

[2]Patients can meet multiple inclusion and/or exclusion criteria; therefore, the total number of patients excluded overall may not equal the sum of all patients in each criterion.

[1]The cohorts include patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. We defined boosters using four different cohorts:

- Cohort 1: Individuals with evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 2: Individuals with a history of an immunocompromising condition and evidence of at least three vaccine codes more than four days apart prior to their booster dose.
- Cohort 3: Individuals without a history of an immunocompromising condition and evidence of at least two vaccine codes more than four days apart prior to their booster dose.
- Cohort 4: Individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine.

[2]The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who have evidence of receiving at least two vaccine doses more than four days apart prior to their booster dose.

[3]Including any evidence of HIV/AIDS, Hematological Malignancy, Treatment-Independent Immune Deficiencies, Dialysis, Chemo Therapeutic Agents/ Diagnoses and Procedures, Immunosuppressant Therapeutic Agents/ Diagnoses and Procedures, Steroid Diagnoses and Procedures, Organ Transplant Diagnoses and Procedures, or Solid Malignancies any time before index.

[4]The cohort includes patients with evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals with a history of an immunocompromising condition and evidence of at least three vaccine doses more than four days apart prior to their booster dose.

[5]The cohort includes patients without evidence of an immunocompromising condition in their enrollment history who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date set as the date of the booster. Recipients of boosters are defined as individuals without a history of an immunocompromising condition and evidence of at least two vaccine doses more than four days apart prior to their booster dose.

[6]The cohort includes patients who received a Pfizer-BioNTech or Moderna COVID-19 vaccine booster after September 1, 2021, with the index date defined as the date of the booster. Recipients of boosters are defined as individuals who received a vaccine where the code description specified that it was for a booster or bivalent COVID-19 vaccine. No prior evidence of having COVID-19 vaccination inclusion criteria was required for this cohort.

***The wildcard symbol (*) can be used to represent 'any' values of either the care setting or principal discharge diagnosis flag. Wildcard does not restrict a specific principal diagnosis position. The principal discharge diagnosis flag is only relevant for diagnosis codes.**
The (P) at the end of the care setting refers to the primary diagnosis position, while the (S) refers to the secondary diagnosis position. This indicates that only the first or second diagnosis on the claims should be used for specified codes. For example, IPP (Inpatient Primary) uses the first diagnosis position, and IPS (Inpatient Scondary) uses the second diagnosis position.

[1]Caresetting/ Principal Diagnosis
Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Care setting/PDX parameter.

[2] Specified chronic conditions were defined using Centers for Medicare and Medicaid Services' (CMS) Chronic Conditions Data Warehouse (CCW) algorithms.

***The wildcard symbol (*) can be used to represent 'any' values of either the care setting or principal discharge diagnosis flag. Wildcard does not restrict a specific principal diagnosis position. The principal discharge diagnosis flag is only relevant for diagnosis codes.**
The (P) at the end of the care setting refers to the primary diagnosis position, while the (S) refers to the secondary diagnosis position. This indicates that only the first or second diagnosis on the claims should be used for specified codes. For example, IPP (Inpatient Primary) uses the first diagnosis position, and IPS (Inpatient Scondary) uses the second diagnosis position.

[1]Caresetting/ Principal Diagnosis

Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Appendix G r01. Specifications Defining Parameters for Baseline Characteristics for run01 for this Request

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Care setting/PDX parameter.

[2] Specified chronic conditions were defined using Centers for Medicare and Medicaid Services' (CMS) Chronic Conditions Data Warehouse (CCW) algorithms.

[1]Caresetting/ Principal Diagnosis

Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Care setting/PDX parameter.

[2] Specified chronic conditions were defined using Centers for Medicare and Medicaid Services' (CMS) Chronic Conditions Data Warehouse (CCW) algorithms.

***The wildcard symbol (*) can be used to represent 'any' values of either the care setting or principal discharge diagnosis flag. Wildcard does not restrict a specific principal diagnosis position. The principal discharge diagnosis flag is only relevant for diagnosis codes.**
The (P) at the end of the care setting refers to the primary diagnosis position, while the (S) refers to the secondary diagnosis position. This indicates that only the first or second diagnosis on the claims should be used for specified codes. For example, IPP (Inpatient Primary) uses the first diagnosis position, and IPS (Inpatient Scondary) uses the second diagnosis position.

Covariate	Covariate Number	Cohort (scenarios)	Combo Covariate Components	Care setting/ Principal diagnosis[1]	Code Category	Evaluation period start	Evaluation period end	Exclude evidence of days supply if covariate includes dispensings	Number of instances the covariate should be found in evaluation period	Minimum Days Supplied

[1]Caresetting/ Principal Diagnosis
- Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters, but excludes emergency department encounters.
- Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.
- Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.
- Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility (SNF), rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.
- Other Ambulatory Visit (OA) - includes other non overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Care setting/PDX parameter.

[2] Specified chronic conditions were defined using Centers for Medicare and Medicaid Services' (CMS) Chronic Conditions Data Warehouse (CCW) algorithms.
