

Disclaimer

The FDA chose a specific outcome algorithm that met its need for a given medical product-outcome assessment. The use of a specific outcome algorithm in a Sentinel assessment should not be interpreted as an endorsement from FDA to use the algorithm for all safety assessments. Investigators should always consider the objective, study design, analytic approach, and data source of a given medical product safety assessment when choosing the outcome algorithm. The suitability of an outcome algorithm may change when applied to different scenarios. For additional information, please refer to the

[Best Practices for Conducting and Reporting Pharmacoepidemiologic Safety Studies Using Electronic Healthcare Data](#) guidance document provided by the FDA.

Overview

Title	Serious Infection Algorithm Defined in "Serious Infection Following Ustekinumab Use in Patients with Ulcerative Colitis: An Inverse Probability of Treatment Weighting Analysis"
Request ID	cder_mpl2p_wp064
Description	<p>This report lists International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) diagnosis codes used to define serious infection in this request. This report additionally lists generic and brand names of medical products used to define antimicrobials in this request.</p> <p>For additional information about the algorithm and how it was defined relative to the cohort and exposure(s) of interest in the analysis, refer to the analysis webpage here: https://sentinelinitiative.org/studies/drugs/individual-drug-analyses/serious-infection-following-ustekinumab-use-patients</p>
Outcome	Serious infection
Algorithm to Define Outcome	<p>We defined the primary outcome as serious infection (SI) or coronavirus disease (COVID-19). We defined SI as an inpatient diagnosis of any one of seven component conditions (see Appendix 1): acute meningitis, acute osteomyelitis, bacteremia, pneumonia, pyelonephritis, serious gastrointestinal infection, or skin or soft tissue infection, with no evidence of nosocomial origins of the condition. To avoid capture of nosocomial events, we required the inpatient diagnosis of the serious infection to be preceded by a diagnosis of any serious or non-serious infection in the outpatient or emergency department setting, or any outpatient antimicrobial dispensing in the seven days prior to and including inpatient admission date (see Appendix 2 AND Appendix 3).</p> <p>We defined COVID-19 disease as an inpatient diagnosis in the primary diagnosis position. We also assessed the following secondary outcomes (see Appendix 1), including, secondary definition of serious infection (SI): defined as an inpatient diagnosis of any one of seven component infections in the primary or secondary diagnosis position. Each of the seven component infections included in the SI algorithm were assessed as separate outcomes. COVID-19 infection, defined as an inpatient diagnosis in the primary diagnosis position, was assessed as a separate outcome. Serious clinical course of COVID-19 infection: composite outcome of serious COVID-19 infection (defined as the presence of a mechanical ventilation procedure or ICU admission in the inpatient care setting during a COVID-19 hospitalization), or inpatient hospital death during a COVID-19 hospitalization (defined as a COVID-19 diagnosis in the inpatient care setting in any diagnosis position with a discharge disposition of "expired" in the same hospitalization).</p>
Query Period	November 1, 2019 - May 31, 2025
Request Send Date	January 6, 2026

Glossary

Care Setting - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings include: Inpatient Hospital Stay (IP), Non-Acute Institutional Stay (IS), Emergency Department (ED), Ambulatory Visit (AV), and Other Ambulatory Visit (OA). For laboratory results, possible care settings include: Emergency department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or missing (U)

Outcome - outcome of interest (either primary or secondary)

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

Query Period - period in which the modular program looks for exposures and outcomes of interest

Request Send Date - date the request was sent to Sentinel Data Partners
